October, 2012

Dear Agricultural Community:

As we review last year's accomplishments, we are grateful for the hard work of Alaska's farmers and ranchers. Their commitment to agriculture provides the citizens of Alaska with a bounty of fresh local products; from sweet carrots, abundant varieties of greens, delicious potatoes, a variety of Alaskan meats, fresh dairy products and flowers with abundant color, to name just a few. Alaskan producers continue to explore new markets and opportunities; this past year producers successfully exported peonies to Taiwan, built a local flour mill, added additional Farmers Markets, and increased movement of local product into local schools. We are proud of our producers and their ability to produce local healthy product. We continue to look for new markets both in state and out, as increasing demand will fuel agriculture growth. We recognize those pioneers who came before us and strive to assure that generations to come will have the opportunity to follow in their footsteps.

Thank you to Agricultural Statistician, Sue Benz of the USDA Alaska Agricultural Statistical Service and the farmers and ranchers who provide the information to measure Alaska's agriculture production progress. We are proud to be a sponsor of the "Alaska Agricultural Statistics 2012".

Sincerely,

A handwritten signature in blue ink that reads "Franci Havemeister".

Franci Havemeister
Director

The Alaska Agricultural Statistics Service is pleased to publish our 52nd annual bulletin “Alaska Agricultural Statistics 2012”. This is the first year that the Bulletin will be published exclusively online.

Collection and publication of data for this publication continues to be made possible through cooperative efforts of the State of Alaska Division of Agriculture, the University of Alaska Fairbanks Agricultural and Forestry Experiment Station, the Cooperative Extension Service of the University of Alaska Fairbanks, and the National Agricultural Statistics Service of the United States Department of Agriculture.

This publication includes statistics on Alaskan agriculture for 2011 and previous years. These data include State level statistics on crops, livestock, cash receipts, number of farms and value of production, as well as breakdowns by geographic regions when available.

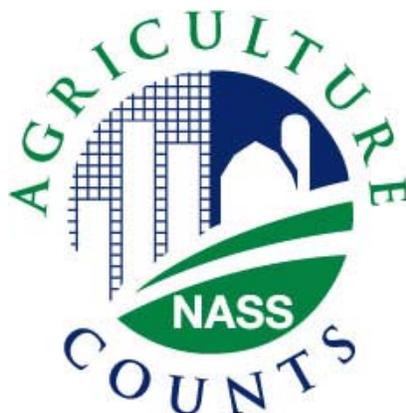

The data for this publication comes from surveys conducted throughout the year. This publication would not be possible without the active cooperation of the Alaskan producers, agri-businesses, county extension agents, university staff, weather reporters and other government agencies. A special thank you goes to the farmers and ranchers who took time from their busy schedules to respond to our surveys.

Individual survey results obtained by the National Agricultural Statistics Service are kept strictly confidential. The data collected, as well as names and addresses, are not released to anyone outside this agency, including other USDA and government entities. Information is summarized and published such that no individual operation can be identified. Summarized results are released to everyone free of charge.

Look for the **Census of Agriculture** questionnaire in your mailbox at the beginning of 2013. The Census of Agriculture is a complete count of America’s farms and ranches and the people who operate them. Taken every five years, the Census provides valuable information used at the local, state and national level to plan for the future. The Census is the only source of uniform, comprehensive agricultural data for every state, county or county equivalent in the nation. By participating in the Census, you help show the value and importance of U.S. agriculture. The Census of Agriculture is “Your Voice, Your Future, Your Responsibility”.

We appreciate your interest in Alaskan agriculture and enjoy presenting to you how “**Agriculture Counts**” in the Last Frontier.

^{1/} Includes cash receipts from all crop and livestock commodities in Alaska.

^{2/} Data from 2003-2007 has been revised to reflect a definitional change in what is considered aquaculture. Prior to 2003 operational cost recouped by private non-profit hatcheries were included in cash receipts for agriculture. From 2003 on, aquaculture consists of aquatic farms producing oysters, clams, mussels and other commodities like scallops, seaweed and sea cucumbers. Data provided by Alaska Department of Fish & Game.

^{3/} Includes sheep and lambs, equine, goats, honey, musk ox, reindeer, other livestock, poultry, eggs and wool.

^{4/} Includes berries, grass seed, and other field crops not mentioned above.

ALASKA WEATHER AND CROP SUMMARY – 2011

The 2011 growing season got off to a slow start as farmers waited until mid-May to get into their fields. Temperatures for May were generally above normal while precipitation was below normal. By the end of May barley was 90% planted, oats were 75% planted and potatoes were 70% planted.

June temperatures were near normal, while precipitation was generally above normal, except around Delta Junction. By month's end barley was 30% in boot, oats 100% pre boot, potatoes 75% emerged and the hay harvest was just beginning. July was cooler and wetter than normal. First cutting hay was 90% complete by the end of July and barley was just beginning to turn color.

August was also cooler than normal with below normal precipitation in the Interior, but above normal precipitation in Southcentral and Southeast. Barley harvest was just getting underway by month's end, while oats were turning color. Second cutting hay harvest was 15% complete by the end of August. September was warmer and drier than normal facilitating a good harvest. By month's end 85% of the barley was harvested, 40% of the oats and 65% of the potatoes.

October saw more warm dry weather, but that changed swiftly in November which saw unusually cold temperatures across the state and unusually high precipitation levels in Southcentral. This trend continued for much of the winter with record snowfall totals recorded in several areas of the State.

BARLEY was planted on 5,200 acres in 2011, up from 4,400 acres planted in 2010. Growers harvested 4,800 acres for grain, up from 4,200 acres in 2010. **GRAIN** production was 175,000 bushels, down 10,000 bushels from 2010. Yields were 36.5 bushels per acre, and compares with 44.0 bushels per acre in 2010. The 2011 crop was valued at \$788,000, down from \$814,000 in 2010.

OATS were planted on 2,100 acres in 2011, up 200 acres from a year ago. Growers harvested 1,000 acres of oats for grain, an increase of 200 acres from 2010. Oats for **GRAIN** production was 80,000 bushels, up from 48,000 bushels in 2010. The yield averaged 80.0 bushels per acre and compares with 60.0 bushels per acre in 2010. Value of the 2011 crop, at \$276,000, compares with \$161,000 in 2010.

ALL HAY production of 22,000 tons was down 2,000 tons from the 2010 production. The State's average yield at 1.16 tons per acre compares with 1.20 tons per acre in 2010. The 2011 crop was harvested from 19,000 acres, down 1,000 acres from a year earlier. Value of production of all hay at \$6,600,000 was down \$720,000 from the previous year.

All **POTATO** production of 134,000 cwt was harvested from 720 acres in 2011. This compares with 150,000 cwt from 750 acres in 2010. At \$3,176,000, the value of production was down \$394,000 from the 2010 crop.
