AVOCADO PRODUCTION AND VALUE

FLORIDA: Production of avocados for the just completed 1996-97 season is estimated at 940,000 bushels, up 24 percent from the previous seasons' 760,000 bushels. Trees have completely recovered from the passage of Hurricane Andrew in August 1992. Some new trees and resets are beginning to bear small amounts of fruit.

Bearing acreage is near the same as last season at 5,700 acres. The increase in production is a result of heavy fruit set, good market demand, and reduced incidents of theft of fruit.

The average price for fruit delivered to the packing house door is down slightly to \$13.20 per bushel. Total crop value is up, however, to \$12.4 million.

OTHER STATES: California's 1995-96 production which ended harvest last October 31 was up slightly from the previous season to 6.6 million bushel equivalents with prices received down. Hawaii production was the same at 10,000 bushels with price up slightly.

MANGO PRODUCTION AND VALUE

Production of mangos in Florida for commercial shipments decreased to an estimated 100,000 bushels with the price increasing to \$15.00 per bushel. Bearing acreage is

the same as last year at 1,500. Trees in Dade County have not recovered rapidly from Hurricane Andrew, and disease and bloom problems have limited fruit set each season.

LEMON PRODUCTION AND ON-TREE VALUE

Lemon production increased to 195,000 boxes with the average price per box at \$10.10. "True" lemon varieties

are shipped fresh with some processed, and all of the Meyers are processed.

LIME PRODUCTION

Lime production for the just completed 1996-97 season is 7 percent higher than the previous season. Trees in Dade County have been stressed by lack of rainfall and those

planted after the storm are beginning to produce limited amounts of fruit.
