Arizona Crop and Livestock Reporting Service

# WHY CROP AND LIVESTOCK REPORTS

A man's judgment is no better than his facts and crop reports are the basic facts of Agriculture.

They aid farmers in planning their production and marketing.

They are essential in enacting wise legislation affecting Agriculture.

They are the basis for analysis of agriculture and other business conditions.

They enable railroads to make a better distribution of cars for moving farm products.

They give producers the same foresight to future price trends that organized dealers possess.

They are a check on fluctuation in price. Uncertainty of supply promotes undue fluctuation in price.

They are indispensable in times of war because food is as essential as ammunition and weapons of war.

They are the best basis for adjusting supply to demand which is highly essential if maximum price is to prevail.

They aid farm organizations, schools and others in planning constructive programs, and the prospective purchaser of land.

They give information on surplus and deficit areas of production making possible a more economical distribution of products.

They eliminate the ill effects of misleading reports that might be circulated for private gain, if there were no official reports.

They are a guide to farm resources and for developing new resources such as irrigation, electric power, location of food processing and other factories.

They reduce the amount of speculation in farm products. Speculation thrives on uncertainty. Unbiased official crop reports reduce uncertainty which limits speculation.

They indicate potential buying power thereby enabling the manufacturer to meet the probable demand. With economical production and distribution, the manufacturer can sell at a lower price than he could with uncertain demand.

They reduce the risk of ownership of buyers of farm products which enables them to do business on a smaller margin. Under the stimulus of competition, they pay producers higher prices than could be paid if uncertainty of production existed.

They provide an accurate, unbiased picture of Arizona's agriculture. The facts on present and prospective supplies furnish a sound basis for judgment and action by farmers, other individuals, business men, railroads, crop and livestock interests and governmental agencies.

## INTRODUCTION

The Arizona Crop and Livestock Reporting Service is a cooperative function of The University of Arizona, College of Agriculture, and the United States Department of Agriculture, Statistical Reporting Service. The purpose of this joint effort is to coordinate the collection, analysis and publication of agricultural statistics.

The Service prepares, and makes available to all interested persons, two types of information. First, what has already happened -- acres harvested, yield per acre or cattle placed in feedlots. Second, predictions or forecasts -- intentions to plant, expected yields and expected marketings. These are projections. Final outcomes will be affected by weather, disease, insects and other factors. Accuracy of this type of information increases as the production period draws to a close. At each point, however, these data are useful for planning the next step in the production and marketing process.

The Service relies on voluntary reports from sample surveys of farm and ranch operators to establish State and County estimates of crops produced, livestock numbers, prices paid and received by farmers, farm labor and other significant items. Such data benefit farmers and ranchers, agribusiness and consumers.

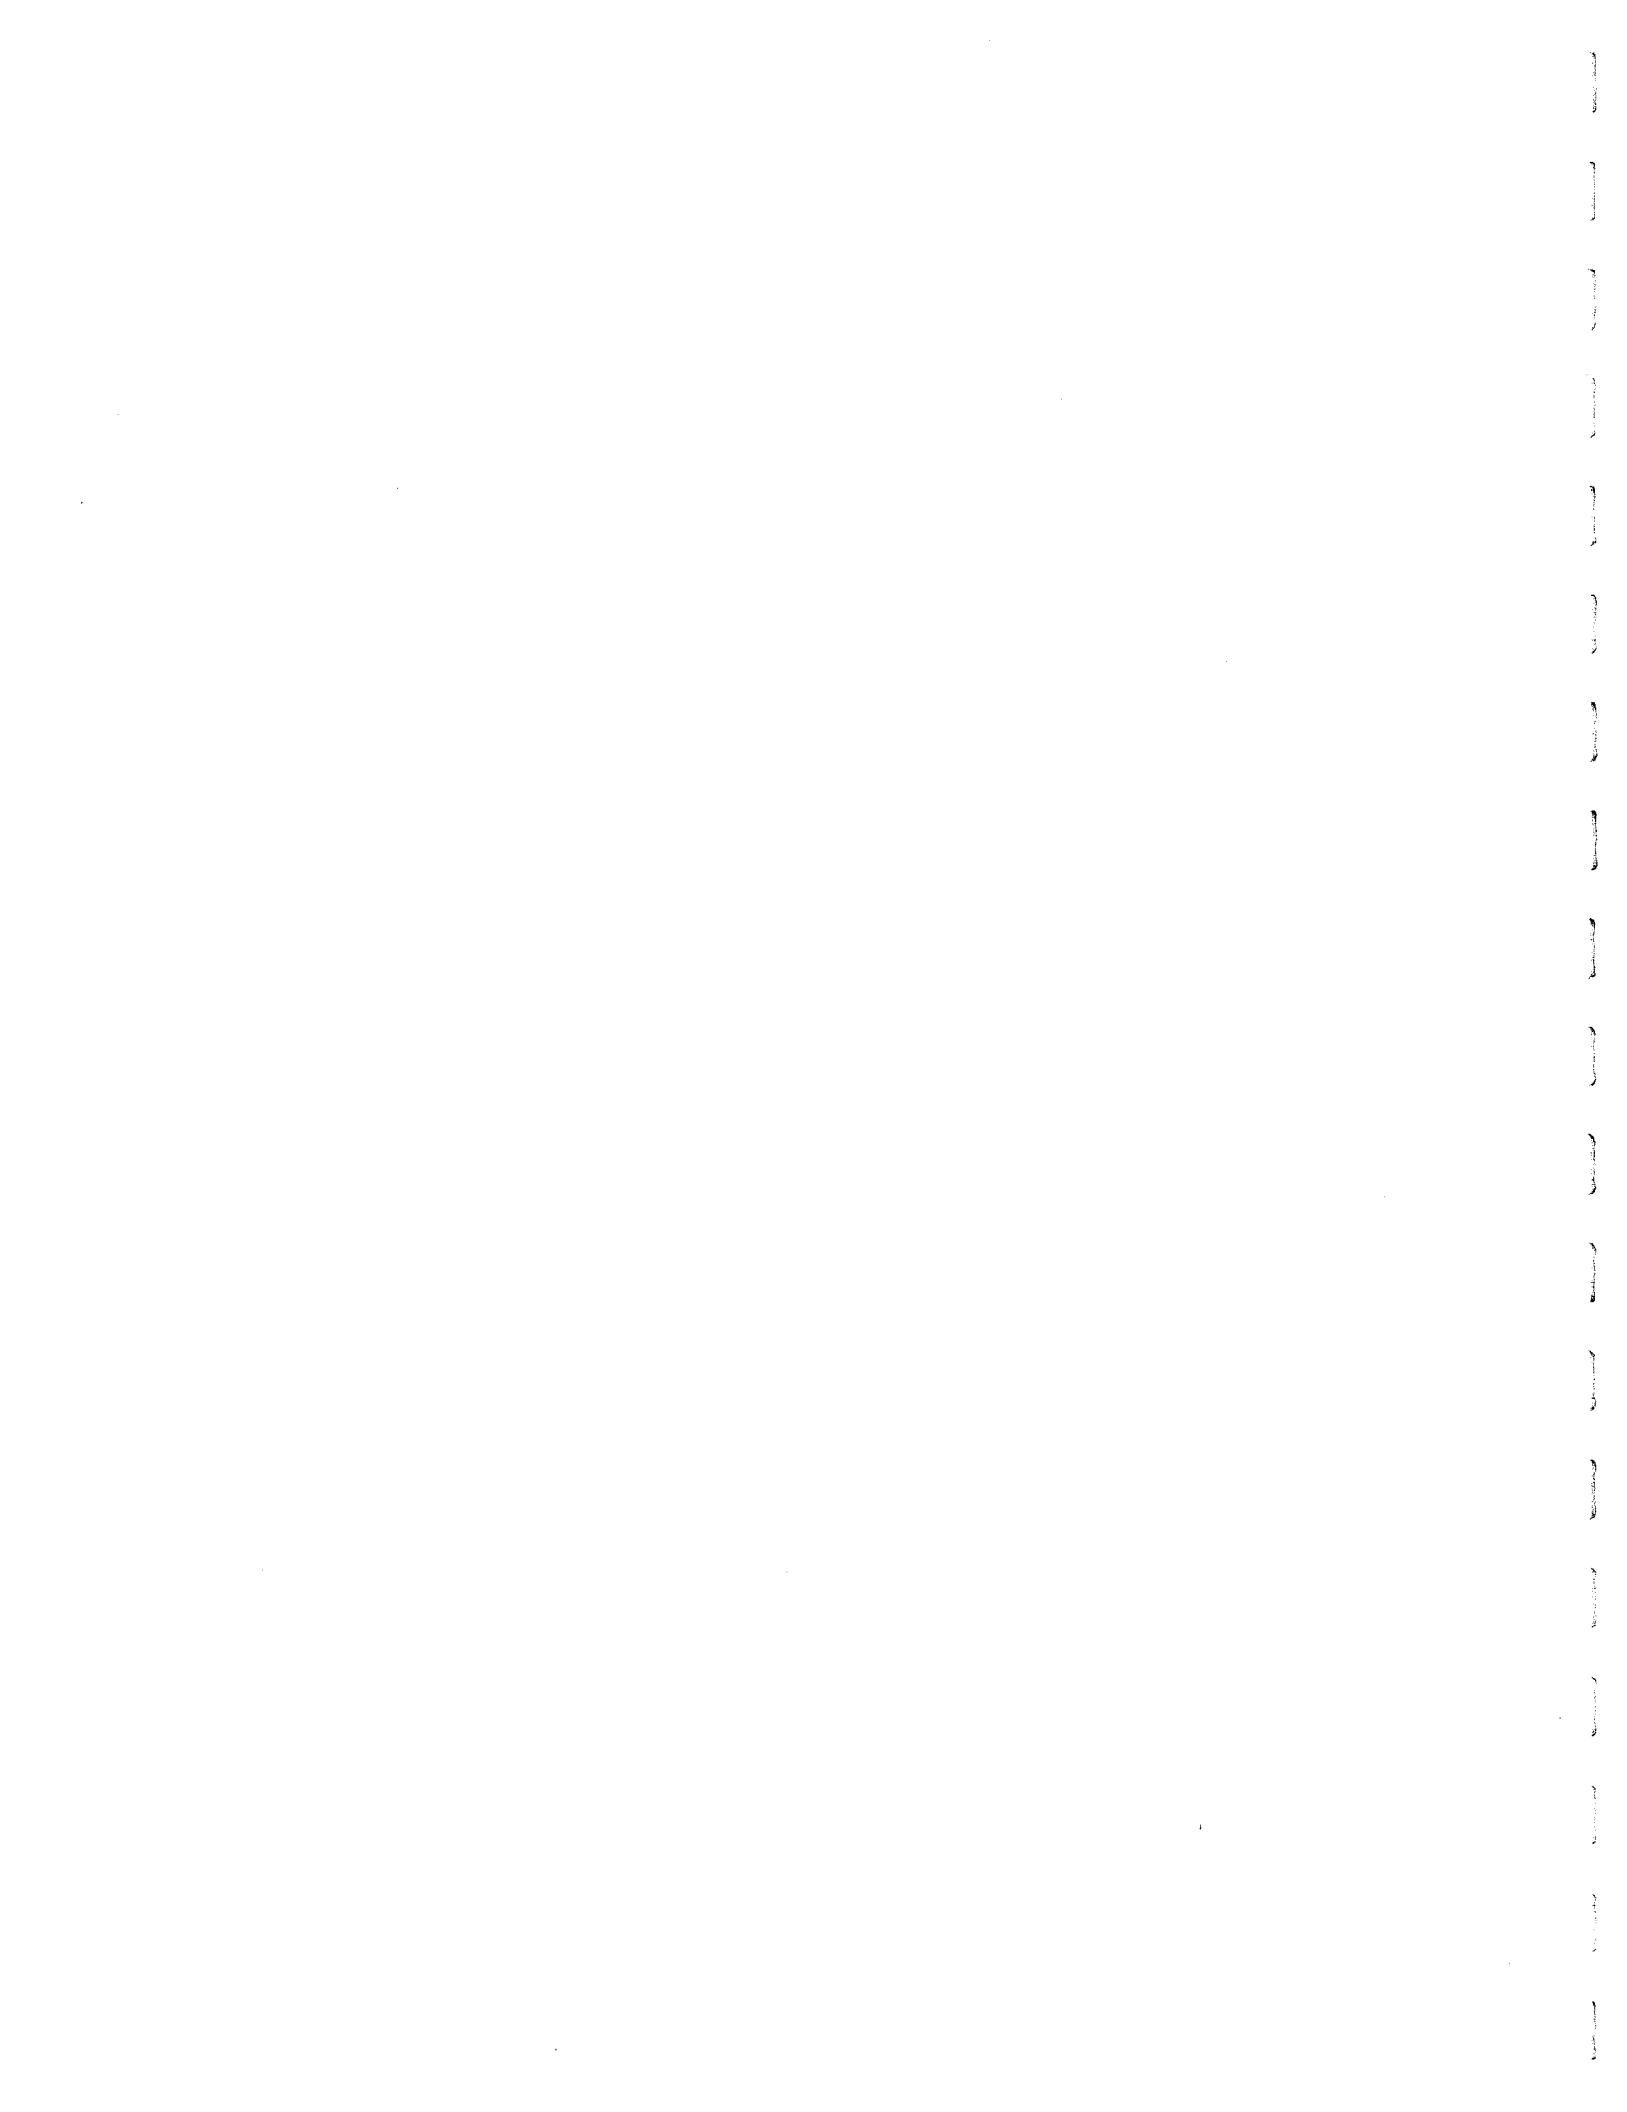

Data collected are examined for reasonableness and representation of the total population sampled. Summaries and estimates are submitted to the Statistical Reporting Service, Crop Reporting Board in Washington, D.C. The Board reviews the State estimates, tabulates a national summary and publishes the data for each crop or item by States. The Arizona Crop and Livestock Reporting Service publishes about 200 of those reports each year. Farmers, ranchers and other interested persons are mailed copies of requested reports. The same reports are supplied to news media throughout Arizona.

Individual producers, suppliers of production items and marketing firms make business decisions based on the total supply and demand of products they produce and market. The more information they have on supply and demand -- past, present and expected -- the better decisions they will be able to make. Specific decisions on what, when and where to produce and market their products results from past and expected action by others.

Agricultural data assists in the defining and evaluating of the role of agriculture in the national economy. Policy decisions with direct and indirect influence on individual commodities and commodity groups are based on analysis of these data. Data in this eleventh annual publication, Arizona Agricultural Statistics are of vital importance to the ongoing progressive agriculture of the State.

Jimmie S. Hillman, Head  
Department of Agricultural Economics

CASH RECEIPTS FROM AGRICULTURE: Cash receipts from farm marketings represent gross proceeds from sales of agricultural commodities by farmers and ranchers during a calendar year. Data by commodity for 1975 will be available in August 1976 after final estimates of prices and quantity sold by months are available. The totals shown for 1975 are preliminary estimates based primarily on production and monthly prices without current data on monthly sales.

Statistical data for most commodities published in this bulletin show "Value of Production." Value of production is derived by multiplying production by season average price. This figure in many instances is different from the "Cash Receipts" in the foregoing table. The difference occurs because cash receipts represent gross proceeds from actual sales or marketings, while value of production relates to total production including that part not sold. For instance, cotton grown one year and held for sale the following year will not be included in cash receipts for the year in which it was produced. However, the carryover value will be included as value of production for the year in which it was produced.

The preliminary estimate of cash receipts from 1975 sales of agricultural products is over \$1.2 billion. This is 2 percent more than 1974. Cash receipts from crops were 1 percent below 1974 while livestock cash receipts were up 6 percent. This is the first decrease in crop cash receipts since 1970. Livestock cash receipts accounted for 50 percent of all commodity cash receipts compared to an average of 56 percent for the previous 3 years.

1/ Source: U. S. Department of Agriculture, Economic Research Service. Preliminary estimates of cash receipts by States are published in March. The only breakdown published at that time is as shown in headings of this table. As more complete check data become available, the March estimates will be adjusted, where necessary, and reflected in an August release. County estimates shown above are based on preliminary production and marketings which are also subject to revision as more complete data become available.

# Agricultural Summary - 1975

Wesley Britton, Agricultural Statistician

WEATHER: The first three months of 1975 were generally cool with scattered light precipitation. Late March saw unprecedented low temperatures with record lows in some areas and frost in the Salt River Valley. By May, most weather stations reported accumulated moisture for the year at below normal levels. June was generally cool and windy in many areas. Fairly good rains were received during July, bringing year-to-date totals back to normal in most areas and above normal in mountain areas. August and early September were mostly hot and dry. Cooler temperatures and scattered light showers returned by the end of September and continued into October. Late October and early November saw normal temperatures and dry conditions. The second half of November was cool and scattered showers were recorded but by the end of the month temperatures were quite cold and the Salt River Valley areas recorded freezing temperatures. December was mostly cool with light, scattered showers. Precipitation totals for the year were well below normal at most reporting stations, but a few mountain stations were slightly above normal.

CROPS: Estimated cash receipts from Arizona crop sales in 1975, at \$607.5 million, were 1 percent below the 1974 level. This was the first decrease in crop cash receipts in several years, and was caused by a combination of lower prices for some crops and smaller crops in some cases. For example, sorghum grain production was down 6 percent from 1974, and the producer price was 40-50 cents per bushel below the 1974 level. The size of the 1975 cotton crop was drastically short of the 1974 notch. Cotton lint contributed \$185.2 million toward the State's crop cash receipts. This led all other crops with 30 percent of the total. Vegetables followed with 18 percent of the crop total. Other leading crops were hay, wheat and sorghum grain with 13 percent, 11 percent and 6 percent, respectively. These crops accounted for 78 percent of all crop cash receipts.

LIVESTOCK: Cash receipts from the sale of livestock and livestock products increased in 1975 to \$618.5 million -- 6 percent above 1974's receipts. Beef cattle average prices were generally higher than 1974 during the last half of 1975. Hog prices were above 1974 almost all year, often \$20.00 per cwt. or more above the 1974 level. Lamb prices were also above the 1974 level most of the year as were egg prices. Prices received for milk were above the 1974 level during the last half of 1975.

Things weren't all that rosy for livestock producers however. For instance alfalfa hay prices were generally well above 1974 levels. Furthermore range conditions were often such that supplemental feeding and water-hauling were required. As a result of higher feed and feeder calf prices and lower prices for meat animals early in the year feedlot cattle numbers were drastically below 1974 levels. Later in the year this trend was reversed and the December 1 number of feedlot cattle and calves was 501,000 head -- well above the 334,000 head a year earlier.

Colorado	Lake Powell	25,002.0	19,838.0	17,199.0	7,347.0
Little Colorado	Lyman	30.6	21.2	11.6	13.4
Little Colorado	Show Low Lake	5.1	1.8	.8	2.0

1/ Based on 15-year period, 1958-72.

WATER SUPPLY: Water supplies should be adequate this year in Arizona if normal precipitation continues throughout the season. Warm rains and melting snow resulted in the heaviest February runoff since 1937 on Tonto Creek and since 1941 on the Verde River. The Salt and Gila Rivers also greatly exceeded their normal flows for February.

SNOW COVER: Snow cover ranges from 34% above average on the Verde Watershed to 27% below on the Gila, with the Salt and Little Colorado near normal. Most of the snow below 7000' has melted, but above 7500' (with the exception of the Gila Watershed) there is a good snow pack. The heaviest relative snow cover is found on Mormon Mountain and on the "Rim" at Baker Butte where conditions are twice normal.

PRECIPITATION: Extremely heavy precipitation occurred during February with amounts of 2 to 3 times normal common on the Verde and Salt Watersheds. Almost all of this precipitation occurred during the first half of the month. Total winter precipitation since November 1 has been near normal on the Salt and Little Colorado Watersheds, 20% above average on the Verde, and 15% below on the Gila.

SOIL MOISTURE: Rain and melting snow has resulted in good soil moisture at the lower and intermediate elevations. Good runoff can be expected from normal precipitation in March and April.

RESERVOIR STORAGE: Salt River Project reservoirs, now containing 62% of capacity, are above average for this date. The net increase in storage of 260,000 acre-feet is five times average for February. San Carlos and Lake Pleasant Reservoirs also received good inflow, but are still somewhat below average.

ARIZONA AGRICULTURAL STATISTICS

**USUAL PLANTING AND HARVESTING DATES: By crops and principal producing areas, Arizona 1975**

Crop	1975 Harvested Acreage	Usual Planting Dates	Usual Harvesting Dates			Principal Producing Counties
			Begins	Most Active	Ends	
ALL SORGHUMS	165,000	May 1-July 1	July 5	July 20-Nov. 25	Dec. 15	Cochise, Graham, Maricopa, Pima, Pinal, Yuma
BARLEY	115,000	Oct. 1-Mar. 1	May 20	May 25-June 30	July 5	Cochise, Graham, Maricopa, Pima, Pinal, Yuma
ALL WHEAT	320,000	Nov. 15-Feb. 1	May 20	May 25-June 10	June 25	Cochise, Graham, Maricopa, Pima, Pinal, Yuma

1/ Does not include grain from acreage harvested for silage and forage.

2/ County acreages based on data from Arizona Fruit and Vegetable Standardization Service and County Agents.

3/ Includes tangerines and tangerine types.

4/ Includes miscellaneous fruits, vegetables and field crops not listed above. Does not include pasture.

\*Acres harvested too small to warrant quantitative estimate. Acres, if any, are included in State totals.
