October 2007

Agricultural Overview

California agriculture saw a 4 percent drop in the sales value of its products in 2006. The state's 76,000 farms and ranches received \$31.4 billion for their output, down from the all-time high of \$32.8 billion reached during 2005. The state's agricultural sales first exceeded the \$30.0 billion mark in 2004, when \$30.9 billion in receipts was tallied.

Low milk prices experienced by California's dairy sector contributed to the drop in agricultural sales. Cash receipts for milk totaled \$4.49 billion, down 14 percent from \$5.22 billion in 2005. The price producers received fell from \$13.92 to \$11.58 per hundred pounds of milk sold during the year. Despite the decline in revenue, milk remained California's number one farm commodity, and the Golden State retained its ranking as the nation's leading dairy producer by a wide margin. California produced 21 percent of the U.S. milk supply in 2006, 23 percent of the cheese, 31 percent of the butter, 50 percent of nonfat dry milk, and 15 percent of the ice cream. The state's dairy farms have increased their milk output every year since 1978; the 3.4 percent increase in overall output in 2006 continued this trend.

Growers of grapes and almonds also saw revenue declines during 2006 of 9 percent and 19 percent, respectively. Wine grape prices held firm, but there were fewer grapes to sell in 2006 compared with the huge 2005 crop. The size of the 2006 almond crop increased 22 percent to record 1.15 billion pounds, causing prices during the first part of the marketing season to fall to \$1.87 per pound, from the final price of \$2.81 received for the 2005 crop.

California remained the number one state in cash farm receipts in 2006, with its \$31.4 billion in revenue representing 13.1 percent of the U.S. total. The state's farm revenues were more than the combined totals of Number 2 Texas and Number 3 Iowa.

California's agricultural abundance includes 400 different commodities. Among these, the state produces about half of U.S.-grown fruits, nuts, and vegetables. Many crops are solely produced in California.

State	Rank	Total Value		
State	Kank	Billion Dollars		
California	1	31.4		
Texas	2	16.0		
Iowa	3	15.1		
Nebraska	4	12.0		
Kansas	5	10.3		

Notable Increases in Cash Receipts:

Apples 40%
Cabbage
Celery
Cherries, Sweet
Grain, Sorghum
Grapes, Table
Lemons
Lettuce, Leaf
Lettuce, Romaine
Potatoes, Summer
Plums, Dried
Raspberries 24%
Tomatoes, Fresh
Tomatoes, Processing 11%

Notable Decreases in Receipts:

Apricots	2%
Cottonseed	%
Dats	5%
Olives	%
Onions, Spring	;%
Oranges, Navel	i%
Oranges, Valencia 38	\$%

(Crop and Livestock Commoditie	es in which California Leads th	e Nation
Almonds	Dates	Lettuce, Leaf	Pistachios
Apricots	Eggplant	Lettuce, Romaine	Plums

Broccoli	Greens, Mustard	Onions, Green	Seed, Vegetable and Flower
Brussels Sprouts	Hay, Alfalfa	Parsley	Spinach
Cabbage, Chinese	Herbs	Passion Fruit	Squash
Cabbage, Fresh Market	Honey	Peaches, Clingstone	Strawberries
Carrots	Jojoba	Peaches, Freestone	Tomatoes, Processing
Cauliflower	Kale	Pears, Bartlett	Turnips
Celery	Kiwifruit	Peas, Chinese	Vegetables, Greenhouse
Chicory	Kumquats	Peppers, Bell	Vegetables, Oriental
Cotton, American Pima	Lemons	Persimmons	Walnuts
Daikon	Lettuce, Head	Pigeons and Squabs	

California is the sole producer (99 percent or more) of the commodities in bold.

Farm Facts

The number of farms operated in California during 2006 was 76,000, less than 4 percent of the national total. The state was home to 10 percent of U.S. farms having sales of \$500,000 or more during the year. The average California farm or ranch operation produced \$413,000 in commodity sales during the year, more than 3 times higher than the U.S. average of \$114,000 per farm. In 2006, California's land devoted to farming and ranching totaled 26.1 million acres, down less than 0.5 percent from the previous year. The average farm size was 346 acres, compared with the U.S. average of 446 acres.

Top Commodities

California's top 20 crop and livestock commodities accounted for more than \$25.0 billion in value for 2006. Ten commodities exceeded \$1.00 billion in value. Avocados joined the top 20 list for 2006, while all peaches dropped from 19th to 23rd in the commodity rankings. Milk remained the number one commodity in 2006, followed by grapes, and nursery and greenhouse products.

Leading Counties

California has some of the most agriculturally productive counties in the nation. According to the 2002 Census of Agriculture's ranking of market value of agricultural products sold, nine of the nation's top 10, and 12 of the top 20, producing counties are in California.

California's county Agricultural Commissioner reports showed a slight decrease of 0.9 percent in the value of their agricultural production for 2006. Fourteen counties reported a value of production in excess of \$1.01 billion. Fresno continued as the leading county with an agricultural production value of \$4.84 billion, an increase of 4.4 percent from the 2005 value. Tulare County was second in value of production with \$3.87 billion, 11.2 percent below 2005. Monterey had an increase of 4.3 percent in production to \$3.49 billion, moving the county to third in value. Kern's decrease of 2.1 percent to \$3.48 billion in agricultural production, dropped the county to fourth in value.

Weather Highlights for 2006

January began with a sequence of dynamic Pacific storm systems, which brought heavy rain to northern and southern California. The abundance of rain caused flooding in some fields and delayed planting dates. Heavy rainfall caused an increased spraying of herbicides. However, the rain was highly favorable for several grain crops. Later in the month, there was a high-pressure ridge over the west coast, which brought dry and mild weather. As a consequence of the high-pressure, there were cooler temperatures and dry conditions. Fieldwork finally resumed, but not in places where water was standing.

Dry and unseasonably warm weather conditions persisted from the end of January, while February weather was variable. A cold front moved over northern California bringing showers to the mountains. Daytime highs in the central valley and southern California dropped 20 to 25 degrees. Ample soil moisture and modest temperatures created outstanding growing conditions. Fieldwork continued in preparation for spring planting.

March and April brought a substantial amount of precipitation. Mild temperatures and a large quantity of rainfall prompted fruit and nuts crops to bloom.

A wet weather pattern persisted at the beginning of April. There were strong Pacific storm systems that moved across the west coast, which resulted in a considerable amount of rain and mountain snow in northern California. Nectarines, other stone fruits, and apricots were being thinned. Harvesting of all citrus fruit resumed after being stopped due to wet soil and rainy conditions. However, alfalfa cuttings were damaged by precipitation, and cotton and rice planting was delayed by the wet conditions. Planting resumed as the fields dried out.

High pressure across the state in early May led to sunny skies and very warm conditions. A storm system associated with a Pacific low brought showers and cool air into northern and southern California. Modest high-pressure ridges persisted for the remainder of May causing warm and dry conditions for the state as temperatures reached normal. Hot and dry weather boosted field crop growth and caused small grains to dry.

Temperatures in June were unstable with influence from both high and low-pressure systems. Patterns of low pressure brought cooler temperatures and minimal precipitation. The need for irrigation increased as high-pressure brought hot weather. Hay drying conditions were improved with warm temperatures.

July began with cooler than normal temperatures due to a low-pressure trough. Later, heat waves swept across California. Record setting temperatures damaged crops and caused the deaths of substantial numbers of livestock and poultry. Subtropical moisture circulated around the high-pressure system and increased humidity, with unusually warm overnight temperatures.

High-pressure systems continued through the first couple of weeks of August. Moisture began circulating due to a low-pressure system that caused thunderstorm activity. A low-pressure system generated heavy showers and the temperatures became cooler than normal. Livestock were moved to irrigated pastures and dry foothill pastures. Some livestock received protein and other supplements as hot weather decreased forage quantities. Cotton, corn, and beans progressed well with the moderate temperatures. September was mainly dry. A fall-like pattern set up over California with an upper-level high- pressure ridge. Very dry air and dry grasses signaled high fire dangers across much of the state that led to red flag warnings in some areas.

Weather in October displayed typical dry and mild fall patterns. An upper-level high-pressure was centered over the four-corner region that caused some light rain in the northern and central coast. For interior portions of southern California, including the Imperial Valley, temperatures were below normal. A series of cold fronts passed through the state, but the only effect was cooler temperatures with no significant precipitation occurring.

The first active storm system began in November and shifted southward from the Pacific Northwest, bringing the first significant snow of the season. There was steady precipitation in the northern central valley and also in the mountains of northern California. A series of weak Pacific frontal systems passed through the Pacific Northwest and brought occasional showers and cooler temperatures to California.

December began with a cold front that caused wet weather across California. A series of Pacific weather systems brought showers and cool temperatures with widespread freezing temperatures across the interior valleys of northern and central California. At the end of December, another Pacific storm system approached northern California spreading showers and cooler temperatures across the northern coast, while southern California remained dry and warm. Ranges and pastures were in better condition as result of the rain.

Global Marketplace

The year 2005 (the last year for which export statistics are available) set a new record for California's agricultural exports, surpassing \$9 billion for the first time. This represents a 13 percent increase over 2004 and a 24 percent increase over 2003. California exports agricultural products to almost 150 countries, but the 10 principal destinations accounted for 72 percent of the 2005 export value. The leading four destinations - European Union, Canada, Japan and Mexico - accounted for 56 percent of total exports. For three years, the European Union has been the key destination for California agricultural exports, accounting for 22 percent of the 2005 export value. Principal commodities shipped to the European Union are almonds, wine and pistachios.

Even though the major market for California agricultural production is still the rest of the nation, foreign markets have become relatively more important in the past six years. In 1999, only 16 percent of local production was being shipped to overseas markets, whereas in 2005 this figure was 22 percent. Clearly, California agriculture is enjoyed around the world.

1/ Value of agricultural sector production is the gross value of commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

2/ A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales.

1/ Based on quantity produced for crops and on quantity marketed for livestock and poultry products.

2/ Based on value of quantity harvested for crops, value of quantity marketed for livestock, and value of quantity produced for poultry products.

3/ Based on values published in the county agricultural commissioners' annual crop reports.

4/ Share of U.S. production based on 2002 Census of Agriculture.

5/ The 2006 price and value are based on the 2005 California average price.

6/ Extracted from county agricultural commissioners' annual crop reports.

7/ Includes sunflower, safflower, and canola.

// includes sum/ower, sum/ower, and canoal.
 // Includes trees, shrubs, vines, bulbs, turf, etc., not included in flowers and foliage category.
 // Includes cut flowers, potted plants, foliage plants, bedding plants, and indoor decoratives.

Other Livestock and Poultry				290,365								

1/

Based on quantity produced for crops and on quantity marketed for livestock and poultry products. Based on value of quantity harvested for crops, value of quantity marketed for livestock, and value of quantity produced for poultry products. 2/

3/ Based on values published in the county agricultural commissioners' annual crop reports.

California share of U.S. production is less than one-half percent. 4/

Seasonal Rainfall with Comparisons to Normal, 2006-2007

1/ Rainfall year is July 1 - June 30.

Source: Western Regional Climate Center, Reno, Nevada

Field Crops

California field crops experienced a decline in total value of production for the second year in a row in 2006, with the total at \$3.34 billion, down 6 percent from 2005. California's acreage and production also declined. The harvested acreage dropped by 5 percent and production by 3 percent from 2005.

California is the leading state in alfalfa hay production and consumption. In 2006, California produced 7.14 million tons of alfalfa hay, generating \$828 million, the highest value among all field crops. Record rainfall in March and April delayed the start of the 2006 alfalfa hay season in California and reduced the availability of higher quality hay. The spring rains, along with record high temperatures in July, pushed alfalfa hay yields to the lowest point in eight years. Production dropped 1 percent from 2005, with a 13 percent decrease for production value. Other hay also showed a decline in production and price, as values decreased 12 percent to \$175 million.

Cotton planting was delayed due to wet weather and cool temperatures during March and April. In late April, there was a break in the weather and cotton growers began aggressively planting to make up for the delay of nearly a month. The weather remained warm, and rain returned when plants were small, allowing the late-planted crop to catch up. A prolonged heat wave arrived during July and took a toll on what originally looked to be an extremely good cotton crop. The weather during harvest was exceptional and helped stimulate extra growth. Price of Upland cotton was \$0.57 per pound, down 5 percent from 2005, but 11 percent higher than 2004. Planted acreage showed a significant decrease of 34 percent. The production decline caused the total value of Upland cotton to drop to \$214 million from \$309 million in 2005 and \$443 million in 2004. California growers planted 275,000 acres of American Pima cotton, up 45,000 from 2005. The American Pima cotton price decreased 16 percent to \$1.04 per pound, generating \$343 million.

Rice is one of the major field crops in California with 526,000 acres planted in 2006. Medium grain rice contributed about 90 percent of the total rice production and acreage. Rain during late March and early April delayed planting in many areas, causing rice planting to continue into mid-June. A total of 460,000 acres of medium grain rice were successfully planted. Along with a 4 percent boost in yield, medium grain rice production rose 3 percent to 36.1 million cwt. All rice grain value of production increased 18 percent for 2006 totaling \$464 million.

California's 2006 sorghum for grain had the largest increase in value of production at 69 percent totaling \$6.83 million. The harvested acreage remained the same, at 10,000 acres, when compared to 2005, but the total production increased 17 percent to 29,400 tons. Growers began ground preparations and herbicide applications in mid-January in preparation for planting of the spring sorghum crop but were frequently interrupted by a series of wet storms that plagued the state through the spring. Planting was delayed by the weather with some fields planted in mid-March and some planted as late as June. The earlier planted fields progressed well with the warm temperatures of May. Growers continued their practice of frequent irrigation due to the heat wave in July. Chopping of sorghum for silage began around mid-September with harvest continuing through to November.

Wheat production took a heavy hit in 2006 from the stripe rust infestation affecting a little less than 60 percent of the crop. A total of 520,000 acres were planted and 315,000 were harvested for grain. Both numbers are the lowest in the past ten years. Overall, production declined 22 percent and value dropped 26 percent. Winter wheat declined in acreage, yield, and total production value, which was down 22 percent from 2005. Durum wheat production was down 2 percent to 193,050 tons. Even though the acreage and production were down for Durum wheat, the price per ton increased 6 percent to \$143.33 resulting in a 4 percent increase in total production value when compared to 2005.

Notable Increases in Value:

Cottonseed	13%
Potatoes, Fall	15%
Potatoes, Sweet	29%
Rice, All	18%
Sorghum for Grain	69%

Significant Decreases in Value:

Cotton, Upland	31%
Potatoes, Winter	16%
Wheat, Winter	22%
Wheat, All	15%

1/ Area planted includes preceding fall.

2/ Production is on a clean basis.

3/ Missing data has not been published due to the estimate being discontinued, not estimated, or not available.

4/ Includes varieties not listed separately. Excludes beans grown for garden seed.

5/ Planted acreage is for all purposes.

6/ Production ginned and to be ginned. Cotton bales are 480 lbs. net-weight.

7/ Estimates began in 2005.

8/ All alfalfa forage production is the sum of alfalfa harvested as dry hay; and alfalfa haylage and greenchop production after converting it to a dry equivalent basis.

9/ All forage production is the sum of the following dry equivalents: alfalfa hay and all other hay harvested as dry hay, alfalfa haylage and greenchop, all other hay haylage and greenchop; after converting alfalfa and all other haylage and greenchop to a dry equivalent basis.

10/ Estimated marketings of alfalfa and other hay used as weights to calculate all hay price for 1997-2006.

11/ Includes only alfalfa and alfalfa mixtures that were harvested as haylage or greenchop (green weight). Alfalfa harvested as dry hay is not included.

12/ Includes all types of forage harvested as haylage or greenchop (green weight). Forage harvested as dry hay and corn and sorghum silage/greenchop are not included.

13/ Sweet rice acreage has been included since the 2003 crop year, but not previous years.

14/ Excludes wild rice.

15/ Estimates began in 2000.

16/ Relates to year of intended harvest for fall planted beets in central California and to year of planting for overwintered beets in central and southern California.

1/ Includes one or more counties within a district that normally have less than 500 acres planted.

Floriculture

The overall value of floriculture sales in the United States by operations selling \$10,000 or more, dropped 3 percent to \$3.80 billion for 2006. California continued to lead the nation with floriculture crops valued at \$1.02 billion, nearly identical to the 2005 value. Florida continued to be the runner-up and was down 16 percent from the prior year, with a wholesale value of \$800 million in 2006. The number of producers in California declined from 822 in 2005 to 732 in 2006, as compared with 932 for Florida in 2005 and 832 producers in Florida for 2006. California and Florida accounted for 46 percent of the 15-state total value. The top five states (California, Florida, Michigan, Texas, and New York) accounted for 67 percent of the total value.

California led the country with 77 percent of the total cut flower sales by operations selling \$10,000 or more, with \$316 million for 2006. Grower sales of cut flowers were up with the rise attributed to more sales of lilies, Gerbera daisies, and tulips. Among the major cut flower states, sales in California, Florida, and Hawaii were all higher than 2005. The number of U.S. cut flower producers was still declining due to lower cost imports capturing more of the floriculture market. Cut flower annual sales continued to rise, however. Nationally, sales of potted flowering plants declined 3 percent from 2005. California continued to lead the country in sales of potted flowering plants in 2006 with a value of \$206 million. This was 33 percent of total U.S. value and more than twice Florida's sales of \$79.8 million.

Orchids continued to lead this category at \$583 million, fractionally below 2005. The potted poinsettias were up 20 percent to \$36.2 million from a year ago. Other potted flowering plants, for indoor or patio use, were valued at \$63.7 million, up 4 percent from 2005. Orchids, poinsettias, and florist chrysanthemums continued to be the top sellers, accounting for 52 percent of California's total potted flowering plants.

 For potted plants, price represents a weighted average for plants sold in pots less than 5 inches and in pots 5 inches or more.

3/ Included in state totals to avoid disclosure of individual operations.

A/Pot price is a weighted average of all pots to avoid disclosure of individual operations.
 Total includes Leatherleaf Ferns, which are not published to avoid disclosure of individual operations.

Fruit and Nut Crops

California accounts for 46 percent of the U.S. fruit and nut production and 62 percent of the national value of fruit and nut crops. In 2006, the state produced 13.8 million tons of fruit and nuts, 10 percent less than 2005. The main reason for the decline was a smaller grape crop. The 2006 harvest of 5.77 million tons was 17 percent smaller then the huge 2005 grape crop. The state's total production value of all fruits and nuts in 2006 was \$10.4 billion, down 4 percent from 2005.

Grapes continue to be the top-valued fruit and nut crop at \$3.03 billion, decreasing 5 percent from the previous year. Crops with record production in 2006 were almonds, avocados, blueberries, Navel oranges, raspberries, strawberries, and tangerines. California accounted for nearly all the national production of almonds, dates, figs, kiwifruit, olives, Clingstone peaches, pistachios, dried plums, raisins, and walnuts.

Significant Increases in Production:

Almonds
Avocados
Boysenberries
Pears, All
Pears, Bartlett
Plums, Dried
Tangerines

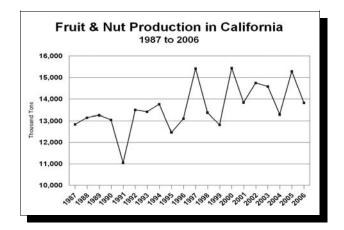

Notable Decreases in Production:

Apricots	48%
Kiwifruit	30%
Olives	83%
Oranges, Valencia	32%
Peaches, Clingstone	26%

The year began with a significant amount of rainfall, but February brought dry and mild conditions. March produced wet and cool weather patterns, which continued through April. The weather provided conditions for diseases; therefore, orchards were being treated with fungicides to prevent blossom rot. Strawberry harvesting began in central California in early May and continued until rain hampered harvest during the last part of the month. In June, weather was a littler cooler than normal, which did not have any impact on fruit harvest. The remainder of the summer was hot and dry, with temperatures reaching the 100s in many parts of the state. Almond hull split had begun in some areas, and hull split spraying was underway. Almond, raisin grape, wine grape, and pomegranate harvesting began while stone fruit, lemon, and grapefruit harvesting continued. The fall initiated warm and dry conditions that lasted throughout the month of October. The year ended as a vigorous cold front passed through northern California, bringing heavy rains to the northern coast. The cold front brought significant snowfall to the northern and southern mountain ranges and to the Sierra Nevada range.

According to the USDA's Economic Research Service, the per capita nut consumption in the U.S. for 2005-2006 fell 22 percent to 2.7 pounds per person (shelled basis), the lowest since 2000-2001. Americans consumed smaller amounts of almonds, walnuts, pistachio nuts, macadamia nuts, hazelnuts, and other nuts (mostly imports such as cashews, Brazil nuts, and pine nuts). Only pecan consumption increased due to larger supplies from the on-cycle of the trees' alternate-bearing nature and near-record imports.

Americans consumed more non-citrus fruit products in 2005-2006, increasing 2 percent to 179.4 pounds per person, but all citrus consumption declined 7 percent in 2005-2006, to 99.7 pounds per person. Orange consumption increased during 2005 by 6 percent. Banana consumption declined for the third consecutive year, dropping to 25.1 pounds per person in 2005-2006, down 2 percent from 2004. Apple consumption declined 10 percent between 2004 and 2005, at 16.9 pounds per person.

1/ Non-bearing shown only in year when acreage surveys were conducted.

2/ Return at processing plant door or packinghouse door.

3/ Acres of raisin type grapes enrolled in the California Raisin Industry Diversion (RID) program were; 1997-2000 – zero; 2001 – 41,000;

2002 – 27,000; 2003-2006 – zero. These acres were deducted from bearing acres before calculating yield.

4/ Raisin-type production is the fresh equivalent of dried and not dried.

5/ Acreage by county, variety and year of planting for 2006 are available upon request.

6/ These crops are almond hulls, apricot-plum crosses (aprium, plumcot, pluots), black walnuts, chayotes, cherimoyas, chestnuts, feijoas, guavas, jojobas, jujubes, kumquats, limes, loquats, Macadamia nuts, persimmons, pomegranates, prickly pears, quince, citrus by-products, and orchard biomass.

1/ Data for 1999 not published to avoid possible disclosure. Processed price excludes dried, but processed value includes dried.

2/ Total processed includes canned, frozen, juice, and brined.

3/ Prices for processing and fresh totals were not published to avoid possible disclosure. Small quantities processed included in fresh to avoid possible disclosure.

4/ Includes substandard raisins diverted to other uses.

5/ Processed and fresh fruit price not published to avoid possible disclosure, but included in total utilized.

6/ Small quantities of processed fruit are included in fresh to avoid possible disclosure.

7/ Quantity and value include dried, but price excludes dried.

8/ Processed mostly canned, but includes small quantities dried and other uses not published separately to avoid possible disclosure. Data for 2006 not published to avoid possible disclosure.

9/ Processed mostly juice, but includes small quantities canned and other uses not published separately to avoid possible disclosure.

1/ Non-bearing shown only in year when acreage survey conducted.

Values are based on the edible portion of the crop only. Included in production are inedible quantities of no value: 1997 – 15.0 million pounds, 1998 -- 21.0 million pounds, 1999 – 33.3 million pounds, 2000 – 15.9 million pounds, 2001 – 16.8 million pounds, 2002 – 8.30 million pounds, 2003 -- 20.8 million pounds, 2004 – 14.5 million pounds, 2005 – 16.1 million pounds, 2006 – 23.9 million pounds.

3/ Data for 2006 acreage by county, variety and year of planting available upon request.

California Livestock and Dairy

California's total livestock and livestock products cash receipts were \$7.61 billion in 2006, down 10 percent from 2005. This decline was enough to bump the state from second to fourth ranking nationally in livestock cash receipts. Milk, cattle, and chickens remain the state's leading commodities and cash receipts declined for all three.

The Golden State's dairy industry showed mixed results in 2006. Increased milk production, milk per cow, and a higher number of cows outpaced the demand for dairy products and contributed to lower milk prices for dairy producers. The dairy sector in California continued to change in 2006 with dairies relocating within California, to other states, or shutting down. There was a net loss of 68 dairies in the state during the year.

California has been the nation's leading dairy state since 1993 when it surpassed Wisconsin in milk production. Sales of milk and cream contributed \$4.49 billion in 2006. Wisconsin, New York, Idaho, and Pennsylvania were the next leading states. California ranked number one in the U.S. in the production of fluid milk, butter, ice cream, and nonfat dry milk. California was second in cheese production. The inclination of low milk prices slowly started to shatter toward year-end. The extreme temperatures that hit central California in July and August of 2006 also played an important role in milk prices and production. Many dairy producers felt long-term effects from the heat wave that affected cow reproductive cycles and lowered calf birth rates.

California's dairies produced 38.8 billion pounds of milk, accounting for 21 percent of the nation's milk supply. For the first time, all 12 months of 2006 recorded more than 3.00 billion pounds in milk production. Approximately 48 percent of all the Golden State's milk was used to make cheese.

According to the California Department of Food and Agriculture's Dairy Statistics Branch, 35 counties contributed to the state's market milk production. The top five milk-producing counties in California were Tulare (26 percent), Merced (14 percent), Stanislaus (10 percent), Kings (9 percent), and Kern (9 percent). These counties accounted for 68.4 percent of the state's total milk production in 2006. Sales of fluid milk in California averaged 36 percent whole milk, 34 percent reduced fat milk, 14 percent low fat milk, and 16 percent skim milk. Milk production per cow increased 2 percent in California to 21,815 pounds and the number of dairy cows in the state rose to 1.78 million head. California cheese production has more than doubled in the past decade, from 1.05 billion pounds in 1996 to 2.21 billion pounds in 2006. The steady increase in milk production throughout 2006 caused the U.S. to have more milk on the market than demand, resulting in continued acceptance of dairy product export bids. For 2006, export bids were accepted for cheese, 6,129 metric tons (13.5 million lbs.); anhydrous milk fat, 4,319 metric tons (9.50 million lbs.); butter, 5,864 metric tons (12.9 million lbs.); and whole milk powder, 1,758 metric tons (3.90 million lbs.).

Cash receipts for cattle and calves exemplify decreasing receipts for 2006, but the previous six years have been showing an increasing trend. The 2006 sales totaled \$1.68 billion, compared with \$1.74 billion in 2005. Cattle and calves showed a 4 percent decrease, while receipts for hogs and pigs were 2 percent below the previous year. Sheep and lambs declined the most among meat animals at 17 percent below 2005.

California's 2006 honey production, at 19.8 million pounds, was 34 percent below 2005. Producing colonies totaled 380 thousand, down 5 percent from the previous year. The yield per colony averaged 52 pounds, compared to 75 pounds produced in 2005. However, the average price per pound was 98 cents per pound, 14 cents higher than 2005.

1/ Preliminary 2006 data.

2/ Excludes processed cheese and cottage cheese.

3/ Includes Cheddar, Colby, washed curd, stirred curd, Monterey, and Jack.

4/ Includes all cheeses not included in the above categories.

5/ Includes low fat and nonfat cottage cheese. Fat content is less than 4 percent.

6/ Contains minimum milk-fat content of 10 percent and not less than 4.5 pounds per gallon. Includes nonfat ice cream.

7/ Includes hard, soft-serve, freezer-made milkshake, and freezer-made "milk drink." Contains less than 10 percent milk-fat required for ice cream.

Contains less than 10 percent milk-rat required for ice cream.

8/ Not shown when fewer than three plants reported or individual plant operations could be disclosed.

 $\underline{1}$ Includes one or more counties within a district that normally have less than 300 head of milk cows.

Vegetable and Melon Crops

California continued to be the leading fresh market vegetable producing state in 2006, accounting for 44 percent of the U.S. harvested area, 48 percent of production, and 51 percent of the value.

The total value of California's 2006 fresh and processing vegetable and melon production was \$7.00 billion, up from 2005's revised total of \$6.45 billion. All lettuce remained the leading vegetable crop in value of production, at \$1.61 billion, followed by tomatoes with \$1.14 billion.

Carrots, tomatoes, Romaine lettuce, leaf lettuce, and celery were among the crops showing increased values of production. Onions, spinach, garlic, and artichokes were among crops experiencing declines in value.

According to the USDA Economic Research Service, per capita use of all vegetables, melons, potatoes, sweet potatoes, pulse crops, and mushrooms in the United States fell 3 percent to 428 pounds in 2006. Consumption increased for melons, potatoes, sweet potatoes, pulses, and mushrooms. Declining use was seen for head lettuce, spinach, celery, onions, pumpkins, and tomatoes.

California was also the leading processing vegetable producing state in 2006, with 25 percent of the U.S. harvested acreage, 65 percent of the production, and 52 percent of the value.

Per capita consumption of U.S. processing vegetables decreased 7 percent to 117 pounds in 2006. Total consumption of freezing vegetables increased 3 percent to 6.50 billion pounds (22.3 billion including potatoes) in 2006.

Notable Increases in Production:

Cabbage, Fresh Market	30%
Cucumbers, Fresh Market	19%
Onions, Summer Storage	10%
Peppers, Chili	. 7%

Significant Decreases in Production:

Asparagus	22%
Beans, Fresh Market Snap	17%
Pumpkins	28%
Spinach, Processing	36%

January began with a sequence of dynamic Pacific storm systems, which brought heavy rain to northern and southern California. The abundance of rain caused flooding in some fields and delayed planting dates. Dry and unseasonably warm weather conditions persisted from the end of January, while February weather was variable. During March and April, there were substantial amounts of precipitation. Spring vegetable plantings were a couple weeks late across the state due to the persistent rain.

High pressure across the state in early May led to sunny skies and very warm conditions. Hot and dry weather boosted vegetable crop growth. As the summer advanced, however, record setting temperatures damaged crops. High-pressure systems continued through the first couple of weeks of August. October began with normal temperatures. The end of the year brought moderate weather that promoted growth and development of vegetables.

1/ The processed price is based on equivalent returns at the processing plant door. The fresh market price is at the point of first sale.

2/ Estimates discontinued in 2002.

3/ Estimates began in 2000 and discontinued in 2002.

4/ Includes fresh and processed. Production includes quantity harvested, but not marketed because of loss during storage (shrinkage): 1997 -- 278,000 cwt.; 1998 to 2006 -- 250,000 cwt. Storage loss amounts are excluded when computing total value. Includes some quantities not marketed and excluded in computing value.

5/ Estimates began in 2000.

6/ Estimates began in 1998. Included in summer storage onions.

7/ Estimates began in 1929, but were reinitiated in 2000 after being discontinued for nine years.

8/ Estimates began in 2002.

9/ Miscellaneous vegetables and melons include: Green lima beans for processing, oriental vegetables, green peas, etc. The crops added in 2000 and discontinued in 2002 are excluded from the 2000 and 2001 miscellaneous totals.
