CALIFORNIA AG STATISTICS DISTRICTS

Agricultural Overview

Led by a surge in the dairy sector, California agriculture saw a 15 percent gain in the sales value of its products in 2007. The state's 75,000 farms and ranches received a record \$36.6 billion for their output in 2007, up from \$31.8 billion in receipts a year earlier. The previous high was reached in 2005 when sales totaled \$32.4 billion.

California's largest-in-the-nation dairy industry saw a major recovery in 2007 from the depressed milk prices that plagued it a year earlier. Dairy producers received \$7.33 billion for their milk production during the year, compared with \$4.49 billion during 2006. The state's dairy farms increased milk output 4.8 percent in 2007, while the price producers received rose from \$11.58 to \$18.03 per hundred pounds of milk sold. The Golden State produced 22 percent of the milk in the U.S., with most of it used to make cheese and butter.

California remained the number one state in cash farm receipts in 2007, with its \$36.6 billion in revenue representing 12.8 percent of the U.S. total. The state accounted for 17.6 percent of national receipts for crops, and 7.8 percent of the U.S. revenue for livestock and livestock products.

California's agricultural abundance includes more than 400 commodities. The state produces about half of U.S.-grown fruits, nuts, and vegetables. Many crops are produced solely in California.

Top 5 Agricultural States in Cash Receipts, 2007

State	Rank	Total Value
		<i>Billion Dollars</i>
California	1	36.6
Texas	2	19.1
Iowa	3	19.0
Nebraska	4	14.6
Minnesota	5	12.5

Notable Increases in Cash Receipts:

Apricots	51%
Corn for Grain	98%
Eggs	52%
Garlic	47%
Milk	63%
Oats.....	276%
Olives.....	378%
Onions	67%
Peaches, Clingstone.....	46%
Plums, Dried.....	54%

Notable Decreases in Cash Receipts:

Avocados	25%
Cantaloupes	21%
Grapefruit	48%
Honey	28%
Nectarines	21%
Oranges, Navel and Miscellaneous.....	35%
Oranges, Valencia.....	54%
Tomatoes, Fresh	22%

Crop and Livestock Commodities in which California Leads the Nation

Almonds	Eggplant	Lettuce, Romaine	Pistachios
Apricots	Escarole/Endive	Melons, Cantaloupe	Plums
Artichokes	Figs	Melons, Honeydew	Plums, Dried
Asparagus	Flowers, Bulbs	Milk	Pomegranates
Avocados	Flowers, Cut	Milk Goats	Raspberries
Beans, Dry Baby Lima	Flowers, Potted Plants	Nectarines	Rice, Sweet
Beans, Dry Large Lima	Garlic	Nursery, Bedding Plants	Safflower
Beans, Green Lima	Grapes, Raisins	Nursery Crops	Seed, Alfalfa
Bedding/Garden Plants	Grapes, Table	Olives	Seed, Bermuda Grass
Broccoli	Grapes, Wine	Onions, Dry	Seed, Ladino Clover
Brussels Sprouts	Greens, Mustard	Onions, Green	Seed, Sudan Grass
Cabbage, Chinese	Hay, Alfalfa	Parsley	Seed, Vegetable and Flower
Cabbage, Fresh Market	Herbs	Passion Fruit	Spinach
Carrots	Jojoba	Peaches, Clingstone	Strawberries
Cauliflower	Kale	Peaches, Freestone	Tomatoes, Processing
Celery	Kiwifruit	Pears, Bartlett	Turnips
Chicory	Kumquats	Peas, Chinese	Vegetables, Greenhouse
Cotton, American Pima	Lemons	Peppers, Bell	Vegetables, Oriental
Daikon	Lettuce, Head	Persimmons	Walnuts
Dates	Lettuce, Leaf	Pigeons and Squabs	

California is the sole producer (99 percent or more) of the commodities in bold.

Farm Facts

The number of farms operating in California during 2007 fell to an estimated 75,000 units, less than 4 percent of the national total. However, California was home to 1 in 10 U.S. farms with sales of \$500,000 or more. The average farm or ranch operation in the Golden State produced nearly \$488,000 in commodity sales during the year, about 3 ½ time higher than the U.S. average of \$137,000 per farm. During 2007, California lands devoted to farming and ranching totaled 26.2 million acres, down less than 0.5 percent from the 2006 acreage. The average farm size was 349 acres, compared with the U.S. average of 449 acres.

Top Commodities

California's top 20 crop and livestock commodities accounted for more than \$30.0 billion in value for 2007. Ten commodities exceeded \$1.00 billion in value for 2007. A combination of stronger prices and higher production resulted in nine of the ten registering an increase in value from the previous year. The only exception was the almond crop, which, based on preliminary grower prices,

was down 6 percent in value despite a record large crop. Final grower returns could change the sales value for almonds or other commodities, resulting in an updated dollar amount in next year's report.

Leading Counties

California is home to the most productive agricultural counties in the nation. According to the 2002 Census of Agriculture's ranking of market value of agricultural products sold, nine of the Nation's top 10, and 12 of the top 20, producing counties are in California

California's County Agricultural Commissioner reports showed a 15 percent increase in the value of their agricultural production for 2007. Fourteen counties reported a value of production in excess of \$1.10 billion. Fresno continued as the leading county with an agricultural production value of \$5.35 billion, an increase of 10.4 percent from the 2006 value. Tulare County was second in value of production with \$4.87 billion, up 25.9 percent. Kern showed an increase of 22.7 percent to \$4.09 billion, enough to replace Monterey as the number three county.

Top 20 Commodities for 2005-2007

San Diego	1,461,476	(9)	1,536,260	(10)	Foliage Plants, Trees and Shrubs, Bedding Plants, Avocados, Tomatoes

Weather Highlights for 2007

January began with a string of cold fronts that passed through northern California and pushed southward, bringing heavy rains. High pressure behind the last cold front resulted in a Santa Ana pattern and fire danger in southern California. Nighttime freezing temperatures affected citrus and vegetable crops.

Dry conditions persisted into February, with unseasonably warm temperatures in the south. Small grain fields and pastures showed signs of drought stress. A dynamic low-pressure system brought widespread rain and snow mid month. Rain and warm weather alternated throughout the rest of February and into March.

As March continued, weak systems dominated the weather, leaving the State dry with above normal temperatures. Stone fruit reaped the benefit of the unseasonably warm weather. March ended with a cold front that brought widespread rain, improving crop conditions.

April started out with light precipitation and cool weather, until a succession of cold fronts spread rain and snow across the state. April ended with a significant warming trend that brought temperatures in the Central Valley up to the 90s; southern California reported highs in the 100's.

A cold front pushed through northern California as May began, resulting in cooler temperatures and precipitation. A surface level high-pressure system followed, bringing windy, dry and warm weather. Temperatures climbed and the gusty offshore winds created fire hazards in the south. Warm and dry conditions persisted throughout May and into June, with no significant rainfall recorded. Warm weather improved growth in many crops; dryland grains, pastures, and rangelands suffered due to drought and wind damage.

A series of cold fronts mid June resulted in below normal temperatures and scattered showers. A strong high-pressure system then built over the central California coast. Temperatures across the interior valleys warmed to the triple digit levels and southeastern desert highs of 120 degrees were reported. There were several fires in southern California and the Sierras.

As July began, a strong high pressure brought above normal temperatures. Heat stressed crops and pastures; cool nights slowed rice development and increased grape sugar content. A series of weather systems brought cool temperatures, cloudiness, and some unusual July rain across the northern half of the state. High pressure over the Southwestern U.S. ended July with dry and warm temperatures across California.

The warm and dry weather persisted into August, until a monsoonal air mass from the south scattered rain across California. The rest of August alternated between hot and dry weather and unseasonably cool temperatures and showers. Rangelands were in poor condition, hot weather stressed livestock, and white wash was applied in orchards to prevent sunburn.

September started hot, until dense areas of smoke from Plumas County pushed into the Central Valley, dropping temperatures significantly. A series of weather systems brought below normal temperatures and widespread showers. The cool weather reduced stress on livestock, but the light rain was not enough to start new grass in pastures.

October started out warm, until a series of cold fronts hit the state, cooling temperatures and bringing widespread precipitation. A strong high-pressure system brought dry and mild conditions across the state. This pattern persisted through the end of the month, when an upper level low pressure brought cool temperatures and light shower activity. Some rangelands and crops were fire damaged.

Cool weather continued into November, until a high-pressure system warmed most of the state. Later a frontal passage significantly dropped temperatures and developed precipitation over the north. An upper level high pressure moved over southern California, while a cold front in the north brought rain. Freezing overnight low temperatures prompted the issuance of frost advisories.

December began with a low-pressure system that brought widespread showers to the south. Wild fire scarred areas reported debris flows and mudslides. A series of Pacific storm systems and cold fronts followed, bringing widespread precipitation. Overnight temperatures in the Central Valley fell to the freezing point. Air dried in southern California and temperatures warmed.

Global Marketplace

The nearly \$9.8 billion in California agricultural exports in 2006 (the latest year for which information is available) represented a 5 percent increase from 2005. The top 10 export commodities were almonds, wine, dairy and products, cotton, table grapes, walnuts, oranges, pistachios, processed tomatoes and strawberries. Almonds have been the top export commodity for several years.

California ships agricultural products to more than 150 countries. Accurate export destination data are available for only 48 commodities. The top 10 export destinations accounted for 85 percent of the 2006 export value of the 48 commodities. The top three destinations – the European Union, Canada and Japan – accounted for nearly 60 percent of the 48-commodity total.

The primary market for California agricultural production is the rest of the United States. However, foreign markets have become relatively more important in recent years. In 1999, 16 percent of the state's production was shipped to overseas markets, whereas in 2006 this figure was 24 percent.

Agricultural export data for California are developed by the Agricultural Issues Center at the University of California – Davis, in consultation with the California Department of Food and Agriculture.

1/ Value of agricultural sector production is the gross value of commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

2/ A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales.

1/ Based on quantity produced for crops and on quantity marketed for livestock and poultry products

2/ Based on value of quantity harvested for crops, value of quantity marketed for livestock, and value of quantity produced for poultry products

3/ Based on values published in the county agricultural commissioners' annual crop reports

4/ Share of U.S. production based on 2007 Census of Agriculture.

5/ The 2007 price and value are based on the 2006 California average price.

6/ Extracted from county agricultural commissioners' annual crop reports

7/ Includes sunflower, safflower, and canola.

8/ Includes trees, shrubs, vines, bulbs, turf, etc., not included in flowers and foliage category

9/ Includes cut flowers, potted plants, foliage plants, bedding plants, and indoor decoratives

Field Crops

California field crops experienced an increase in total value of production to a record high in 2007, with the total at \$4.14 billion, up 24 percent from 2006. California's acreage declined while the production increased. The harvested acreage dropped by 2 percent but production was up by 4 percent from 2006.

California is the leading state in alfalfa hay production and consumption. In 2007, California produced 7.13 million tons of alfalfa hay, generating \$1.16 billion, the highest value among all field crops. Production dropped 5 percent from 2006, despite a 34 percent increase for production value. Other hay also showed an increase in production and price; values were up 42 percent to \$273 million.

It was an excellent season for cotton growers. Planting of the 2007 California cotton crop began in early March and continued throughout the State until early May. In late March, the Imperial Valley crop was challenged by the region's unusually cool weather and high winds. Good weather conditions dominated during the growing and harvest seasons, and no major pest problems were reported. Harvest began for a small number of growers in early October and was complete by early December. Growers produced good quality cotton with above average yields. Price of Upland cotton was \$0.70 per pound, up 20 percent from 2006, and 16 percent higher than 2005. Planted acreage showed a significant decrease for the second year in a row at 32 percent. Despite the production decline the total value of Upland cotton increased to \$219 million from \$218 million in 2006. The value was \$309 million in 2005. California growers planted 260,000 acres of American Pima cotton, down 15,000 from 2006. The American Pima cotton price increased 5 percent to \$1.00 per pound, generating \$381 million.

Rice is one of the major field crops in California with 534,000 acres planted in 2007. Medium grain rice contributed about 89 percent of the total rice production and 86 percent of the total acreage. A lack of rain during March allowed rice growers to get an early start on their field preparations for the 2007 crop. Growers began planting rice during the middle of April, and were mostly finished planting by the end of May. Weather conditions were ideal during the early stages of growth. As of the middle of June, most of the rice fields in California had emerged and were showing steady growth. Rice fields were in various stages of heading during August. Harvest began during September and continued through November. A total of 460,000 acres of medium grain rice were successfully planted. Along with an 8 percent boost in yield, medium grain rice production rose 8 percent to 39.1 million cwt. All rice grain value of production increased 12 percent for 2007 totaling \$583 million.

California's 2007 corn for grain had the largest increase in value of production at 161 percent totaling \$158 million. The harvested acreage was up 25 percent at 200,000 acres, when compared to 2006, and the total production nearly doubled at an increase of 98 percent to 1,008,000 tons. This large increase overall is in response to the demand for feed and ethanol.

Less than 50 percent of the California winter wheat crop was harvested for grain. Many dairy farmers growing wheat opted to harvest the wheat as hay or silage due to the high cost for alfalfa hay. Unlike a year ago, the stripe rust fungus was not a major concern for most wheat growers. Wheat was planted on 585,000 acres and 315,000 were harvested for grain. Overall, production increased 26 percent and value jumped 80 percent. Winter wheat increased in acreage, yield, and total production value, which was up 88 percent when compared to 2006. Durum wheat production was up 11 percent to 213,750 tons. Durum wheat price per ton increased 46 percent to \$205.00 resulting in a 62 percent increase in total production value when compared to 2006

Notable Increases in Value:

Corn for Grain	161%
Wheat, Winter.....	88%
Wheat, Durum	62%
Hay, Other	42%
Corn for Silage	41%

Significant Decreases in Value:

Potatoes, Winter.....	18%
Potatoes, Spring.....	15%
Potatoes, Summer	16%
Sugar Beets.....	6%

2007	585,000	315,000	2.51	789,750	196.67	156,139	

- 1/ Area planted includes preceding fall.
- 2/ Production is on a clean basis.
- 3/ Missing data has not been published due to the estimate being discontinued, not estimated, or not available.
- 4/ Includes varieties not listed separately. Excludes beans grown for garden seed.
- 5/ Planted acreage is for all purposes.
- 6/ Production ginned and to be ginned. Cotton bales are 480 lbs. net-weight.
- 7/ Estimates began in 2005.
- 8/ All alfalfa forage production is the sum of alfalfa harvested as dry hay; and alfalfa haylage and greenchop production after converting it to a dry equivalent basis.
- 9/ All forage production is the sum of the following dry equivalents: alfalfa hay and all other hay harvested as dry hay, alfalfa haylage and greenchop, all other hay haylage and greenchop; after converting alfalfa and all other haylage and greenchop to a dry equivalent basis.
- 10/ Estimated marketings of alfalfa and other hay used as weights to calculate all hay price for 1998-2007.
- 11/ Includes only alfalfa and alfalfa mixtures that were harvested as haylage or greenchop (green weight). Alfalfa harvested as dry hay is not included.
- 12/ Includes all types of forage harvested as haylage or greenchop (green weight). Forage harvested as dry hay and corn and sorghum silage/greenchop are not included.
- 13/ Sweet rice acreage has been included since the 2003 crop year, but not previous years.
- 14/ Excludes wild rice.
- 15/ Estimates began in 2000.
- 16/ Relates to year of intended harvest for fall planted beets in central California and to year of planting for overwintered beets in central and southern California.

1/ Includes one or more counties within a district that normally have less than 500 acres planted.

Floriculture

The 2007 wholesale value of floriculture crops, produced by all operations in the 15-State Commercial Floriculture Survey annual program having \$10,000 or more of wholesale or retail sales, increased 2 percent from the revised 2006 valuation, to \$4.10 billion. California continued to lead the nation with floriculture crops valued at \$1.00 billion wholesale, up a fraction of a percent from the revised 2006 total. Florida, the next largest producer, was up 14 percent from the prior year, with \$915 million in wholesale value for 2007. The number of producers in California declined from 709 in 2006 to 672 in 2007. In Florida, the number of producers declined from 832 in 2006 to 754 in 2007. California and Florida accounted for 47 percent of the 15-State total wholesale value. The top five states (California, Florida, Michigan, Texas, and New York) accounted for 67 percent of the 15-State total wholesale value.

California again led the country in cut flower value of production, with \$320 million in wholesale value produced by all operations with \$100,000 or more in total sales. The 2007 wholesale value was up a fraction of a percent from the revised 2006 valuation, and accounted for 77 percent of the total cut flower wholesale value in the 15-State program. The total wholesale value of California-grown Gerbera daisies, iris, lisianthus, and orchids increased substantially for 2007, offsetting decreases in other cut flower crops. Total wholesale cut flower value also increased slightly in Washington State, the second largest producer, while the total wholesale value declined in Florida and Hawaii. The total wholesale value of cut flower crops in the 15-State program increased nearly 1 percent, to \$416 million. The number of cut flower producers in the 15-State program declined 8 percent, from 380 in 2006 to 349 for 2007.

California also led in annual bedding and garden plant value of production, a category that accounted for 18 percent of the total wholesale value of floriculture crops grown by operations with \$100,000 or more in sales in the 15-State program. Wholesale value of California-grown bedding and garden plants, produced by all operations with \$100,000 or more in total sales, was down over 1 percent from 2006, to approximately \$222 million. Wholesale value of Michigan crops, the second largest, increased slightly to \$193 million. Third-largest Texas reported an 8 percent decrease in wholesale value. The total wholesale value of annual bedding and garden plant crops in the 15-State program decreased nearly 4 percent, to \$1.26 billion. The number of annual bedding and garden plant producers in the 15-State program declined 12 percent, from 1,965 in 2006 to 1,734 for 2007.

California also continued to lead the country in potted flowering plant value of production for 2007, with a total value of \$202 million wholesale produced by all operations with \$100,000 or more in total sales, a 2 percent increase over the revised 2006 valuation. California again accounted for 31 percent of the 15-State total wholesale value reported. Florida, the second largest producer, accounted for 22 percent of the 15-State total, with \$142 million wholesale. Potted orchid production continued to lead this category in California, with crops valued at \$56.5 million, up a fraction of a percent from the revised 2006 wholesale value. Production of potted orchids, potted poinsettias, and potted florist chrysanthemums together accounted for over 50 percent of the wholesale value of California-grown potted flowering plants. The total wholesale value of potted flowering plant crops in the 15-State program increased over 6 percent, to \$661 million. The number of potted flowering plant producers in the 15-State program decreased nearly 11 percent, from 1,404 in 2006 to 1,253 for 2007.

Fruit and Nut Crops

California accounts for 47 percent of the U.S. fruit and nut production and 58 percent of the national value of fruit and nut crops. In 2007, the state produced 13.9 million tons of fruit and nuts, 1 percent more than 2006. Grape production totaled 6.21 million tons for 2007, which was 8 percent larger than 2006 grape crop. The state's total production value of all fruits and nuts in 2007 was \$10.8 billion, up 2 percent from 2006.

Grapes continue to be the top-valued fruit and nut crop at \$3.08 billion, increasing 3 percent from the previous year. Crops with record production in 2007 were almonds, blueberries, pistachios, sweet cherries, and strawberries. California accounted for nearly all the national production of almonds, dates, figs, kiwifruit, olives, Clingstone peaches, pistachios, dried plums, raisins, and walnuts.

Significant Increases in Production:

Apricots	108%
Blueberries	65%
Cherries, Sweet	102%
Olives	464%
Pistachios	75%

Notable Decreases in Production:

Avocados	56%
Oranges, Navel and Misc.	27%
Oranges, Valencia	18%
Plums, Dried	58%
Raspberries	15%

According to the USDA's Economic Research Service, the per capita nut consumption in the U.S. for 2006-2007 rose 22 percent to 3.36 pounds per person (shelled basis). Increased availability of many domestically produced tree nuts, due to the "on-cycle" of many of the crops, contributed to the increase in consumption. Large supplies of imported tree nuts, in particular cashews, brazil nuts, and pine nuts (pangolins), which together accounted for 29 percent of all tree nut consumption for the year, were also an important factor in the increased consumption.

Fresh fruit consumption by Americans rose 1 percent during 2006-2007 to 100.9 pounds. Fresh citrus consumption declined due to a smaller orange crop in California and smaller grapefruit crops in California and Florida. Non-citrus fruit consumption averaged 79.3 per person in 2006-2007, the third highest on record, and 2 percent above 2005-2006. Strong demand for apples and pears, blueberries, strawberries, cherries, kiwifruit, and tropical fruit-mangoes, papayas, and pineapple helped offset a weak demand for fresh table grapes, peaches and nectarines, and plums and prunes. Consumption of bananas continued to lead all other fruits, totaling 25.0 pounds in the United States, declining fractionally in 2006-2007.

- 1/ Non-bearing shown only in year when acreage surveys were conducted.
- 2/ Return at processing plant door or packinghouse door.
- 3/ Acres of raisin type grapes enrolled in the California Raisin Industry Diversion (RID) program were; 1998-2000 – zero; 2001 – 41,000; 2002 – 27,000; 2003-2007 – zero. These acres were deducted from bearing acres before calculating yield.
- 4/ Production is the fresh equivalent of dried and not dried.
- 5/ Acreage by county, variety and year of planting for 2007 are available upon request.
- 6/ These crops are apricot-plum crosses (aprium, plumcot, pluots), black walnuts, chayotes, cherimoyas, chestnuts, feijoas, guavas, jojobas, jujubes, kumquats, limes, loquats, Macadamia nuts, persimmons, pomegranates, prickly pears, quince,

Livestock and Dairy

California's total livestock and livestock products cash receipts were a record \$10.7 billion in 2007, up 42 percent from 2006. This increase was enough to bump the state from fourth back to second in ranking nationally accounting for 8 percent of livestock cash receipts. Milk, cattle, and chickens remain the state's leading commodities and cash receipts increased for all three.

The Golden State's dairy industry broached production and financial challenges in 2007. The 4.8 percent increase in milk production, driven by increased milk per cow and a higher number of cows, contributed to the dilemma of inadequate plant capacity in the state. Fluid milk product demand continued to decrease forcing plants to convert the increasing supply into butter, powder, and cheese and shipping some out of state for processing. The average prices paid to producers increased by 56 percent, but this was partially offset by higher production costs, primarily higher feed prices. The dairy sector in California continued to change in 2007 with dairies relocating within California, to other states, or shutting down. There was a net loss of 24 dairies in the state during the year.

California has been the nation's leading dairy state since 1993 when it surpassed Wisconsin in milk production. Sales of milk and cream contributed \$7.33 billion in 2007. Wisconsin, New York, Idaho, and Pennsylvania were the next leading states in total milk production. California ranked number one in the U.S. in the production of fluid milk, butter, ice cream, and nonfat dry milk. California was second in cheese production, despite the 3.6 percent increase in the state's production from 2006.

California's dairies produced 40.7 billion pounds of milk, accounting for 22 percent of the nation's milk supply. For the second year in a row, all 12 months of 2007 recorded more than 3 billion pounds in milk production. Approximately 47 percent of all the Golden State's milk was used to make cheese.

According to the California Department of Food and Agriculture's Dairy Statistics Branch, 35 counties contributed to the state's market milk production. The top five milk-producing counties in California were Tulare (26 percent), Merced (14 percent), Stanislaus (10 percent), Kings (10 percent), and Kern (10 percent). These counties accounted for 69.1 percent of the state's total milk production in 2007. Sales of fluid milk in California averaged 34 percent whole milk, 34 percent reduced fat milk, 14 percent low fat milk, 16 percent skim milk.

Milk production per cow increased 3 percent in California to 22,440 pounds and the number of dairy cows in the state rose to 1.83 million head. California cheese production has nearly doubled in the past decade, from 1.17 billion pounds in 1976 to 2.29 billion pounds in 2007. United States cheese exports increased 39 percent from 2006, to 99 thousand metric tons per the USDA Foreign Agricultural Service. Butter exports also increased by 73 percent in 2007. Drought in New Zealand devastated production and exports, the European Union's transition to a more unregulated market opening the door to more imports, and increased demand in East Asian markets contributed to the surge in export of US dairy products.

Cash receipts for cattle and calves recovered from the decline in 2006, to continue the previous six years upward trend. The 2007 sales totaled \$1.78 billion, compared with \$1.68 billion in 2006. Cattle and calves showed a 6 percent increase and receipts for hogs and pigs were 2 percent above the previous year. Sheep and lambs declined 9 percent from 2006 continuing the recent trend.

California's 2007 honey production, at 13.6 million pounds, was 31 percent below 2006. Producing colonies totaled 340 thousand, down 11 percent from the previous year. The yield per colony averaged 40 pounds, compared to 52 pounds produced in 2006. However, the average price per pound was 104 cents per pound, 5 cents higher than 2006.

1/ Steers and heifers over 500 pounds (including fed cattle) and slaughter cows.

2/ Steers and heifers (all qualities) over 500 pounds (including fed cattle).

3/ Beef cows and cull dairy cows sold for slaughter.

4/ Steers and heifers (all qualities) under 500 pounds

Grazing Fee Annual Average Rates, 1998-2007 1/

Year	Per Animal Unit 2/	Cow-Calf	Per Head
	<i>Dollars Per Month</i>		
1998	11.50	14.50	12.90
1999	12.10	15.00	12.50
2000	12.30	15.50	12.70
2001	13.00	16.00	13.50
2002	12.80	16.50	14.00
2003	13.50	17.50	14.30
2004	14.50	19.50	15.50
2005	15.40	20.50	17.00
2006	16.50	21.00	17.00
2007	16.50	21.50	17.30

1/ The average rates are estimates based on survey indications of monthly lease rates for private, non-irrigated grazing land from the January Cattle Survey.

2/ Includes animal unit plus cow-calf rates. Cow-calf rate converted to animal unit (AUM) using (1 aum=cow-calf *0.833).

1/ Preliminary 2007 data.

2/ Excludes processed cheese and cottage cheese.

3/ Includes Cheddar, Colby, washed curd, stirred curd, Monterey, and Jack.

4/ Includes all cheeses not included in the above categories.

5/ Includes low fat and nonfat cottage cheese. Fat content is less than 4 percent.

6/ Contains minimum milk-fat content of 10 percent and not less than 4.5 pounds per gallon.

7/ Includes hard, soft-serve, freezer-made milkshake, and freezer-made "milk drink."

Contains less than 10 percent milk-fat required for ice cream.

8/ Not shown when fewer than three plants reported or individual plant operations could be disclosed.

1/ Includes one or more counties within a district that normally have less than 500 head of milk cows.

Vegetable and Melon Crops

California continued to be the leading fresh market vegetable producing state in 2007, accounting for 46 percent of the U.S. harvested area, 50 percent of production, and 54 percent of the value.

The total value of California's 2007 fresh and processing vegetable and melon production was \$7.85 billion, up from 2006's revised total of \$7.42 billion. All lettuce remained the leading vegetable crop in value of production, at \$2.18 billion, followed by tomatoes with \$1.24 billion.

Fresh market snap beans, Romaine lettuce, fresh market spinach, processing spinach, and processing tomatoes were among the crops showing increased values of production. A decline in productions included the following crops; artichokes, processing carrots, fresh market cucumbers, summer storage onions, and pumpkins.

According to the USDA Economic Research Service, per capita use of all vegetables, melons, potatoes, sweet potatoes, pulse crops, and mushrooms in the United States increased 2 percent to 444 pounds in 2007. Fresh market consumption increased for onions, cauliflower, pumpkins, sweet corn, celery, cabbage, and garlic. Declining use was seen for squash, artichokes, eggplant, bell peppers, and broccoli.

California was also the leading processing vegetable producing state in 2007, with 26 percent of the U.S. harvested acreage, 69 percent of the production, and 56 percent of the value.

Per capita consumption of U.S. processing vegetables increased 3 percent to 119 pounds in 2007. Total consumption of freezing vegetables decreased 2 percent to 21.9 billion pounds in 2007.

Notable Increases in Production:

Beans, Fresh Market Snap	19%
Lettuce, Romaine	14%
Spinach, Fresh Market	14%
Spinach, Processing	19%
Tomatoes, Processing	20%

Significant Decreases in Production:

Artichokes	15%
Carrots, Processing	32%
Cucumbers, Fresh Market	4%
Onions, Summer Storage	4%
Pumpkins	4%

- 1/ The processed price is based on equivalent returns at the processing plant door. The fresh market price is at the point of first sale.
- 2/ Estimates discontinued in 2002.
- 3/ Estimates began in 2000 and discontinued in 2002.
- 4/ Includes fresh and processed. Production includes quantity harvested, but not marketed because of loss during storage (shrinkage):
1998 to 2007 -- 250,000 cwt. Storage loss amounts are excluded when computing total value. Includes some quantities not marketed and excluded in co
- 5/ Estimates began in 2000.
- 6/ Included in summer storage onions.
- 7/ Estimates began in 1929, but were reinitiated in 2000 after being discontinued for nine years.
- 8/ Estimates began in 2002.
- 9/ Miscellaneous vegetables and melons include: Green lima beans for processing, oriental vegetables, green peas, etc. The crops added in 2000 and discontinued in 2002 are excluded from the 2000 and 2001 miscellaneous totals.
