REVIEW OF THE 1942 CROP SEASON

(REVISED ESTIMATES)

The year 1942, which marked the first year of war, was one of bountiful agricultural production in Colorado. The State's agriculture produced abundantly, many commodities which were most needed to properly feed our armed forces, the civilian population, and our allies. The weather, while favorable in some respects, caused many planting and harvesting difficulties, and this large production and harvest was not achieved without a large measure of sacrifice, long hours of labor and a determination on the part of those engaged in the agricultural industry to "get the job done." Farm and ranch operators worked under conditions which handicapped production in numerous ways. Chief among these were labor shortages and a restricted supply of farm equipment. Despite these difficulties, the combined production of 8 grains (wheat, corn, barley, beans, etc.) in 1942 totalled about 74,000,000 bushels and was 8 per cent larger than in 1941 and 80 per cent above the 10-year (1930-39) average of 41,124,000 bushels. The tonnage of hay and forage harvested in 1942, estimated at 2,818,000 tons, was also above average. The sugar beet crop was the largest since 1933 and the potato crop the largest since 1936. Production of chickens and eggs was much larger than in 1941 and milk flow was also larger. Marketings of beef cattle and sheep were liberal in 1942 and production of hogs was brought to a high level.

Higher prices offered considerable incentive to increased production. The cash farm income from marketings of crops, livestock, and livestock products in 1942 was the highest of record, being \$236,000,000 compared with \$159,000,000 in 1941 and \$200,910,000 in 1929. In evaluating the 1942 income, it should be remembered that this represents gross income and that labor and other costs of production greatly exceeded those of previous years.

Potatoes—The final estimate of production was 17,020,000 bushels. This compared with 12,529,000 bushels in 1941, 14,151,000 bushels the 10-year (1930-39) average and was the largest crop since 1936. Both quantity and quality of production in the San Luis Valley were unusually good in 1942. Yields were fairly satisfactory in Western areas and moderately so in the Northern Colorado section. Shipments by rail were more than double those of 1941, but truck shipments were materially smaller. The crop was valued at \$19,573,000, nearly double the 1941 value.

Sugar Beets—Harvest progressed slowly under extreme labor and weather difficulties, and tonnage per acre was less than expected. Production was placed at 2,178,000 tons which compared with 1,949,000 tons in 1941 and 2,141,000 tons the 10-year average. Sugar content was low, but even so the tonnage of sugar was significantly larger than in 1941 and above average. Plantings in 1942 totalled 195,000 acres, an increase of 60,000 acres from 1941, and were the largest since 1934.

Beans—Production of this important war food commodity at 1,903,000 one-hundred-pound bags was significantly larger than the 1941 crop of 1,621,000 bags and was much above average. Planting were moderately larger than in 1941, but yields per acre were significantly higher and above average; hence, production was 17 per cent larger than in 1941. Relative distribution of the crop in the several bean-growing sections was not greatly different than in 1941. Growers sold beans liberally soon after harvest.

Wheat—After threshing returns were finally in, it was revealed that winter wheat production was the largest of record with the crop totalling 24,996,000 bushels and exceeding the previous record established in 1941 at 21,650,000 bushels. The 1942 crop was nearly three times the 10-year average. Included in 1942 production were over 1,000,000 bushels of wheat harvested from "volunteer" acreage. The spring wheat crop was small, totalling only 2,410,000 bush-

els against 3,386,000 bushels in 1941. Value of the entire wheat crop was placed at \$28,502,000 compared with \$22,282,000 for the 1941 crop.

Rye and Dry Field Peas—The 1942 rye crop of 1,375,000 bushels was the largest ever harvested in Colorado. Production in 1941 totalled 1,034,000 bushels and the 10-year average was 303,000 bushels. Production of **dry peas**, which is an important war food commodity, totalled 270,000 one-hundred-pound bags compared with 216,000 bags in 1941 and 110,000 bags the 10-year average.

Corn—The largest corn crop since 1930 was harvested in 1942. Good yields were obtained in both irrigated and non-irrigated sections, and production for all purposes totalled 18,228,000 bushels compared with 15,026,000 bushels in 1941 and 13,419,000 bushels the 10-year average. "Hybrids" yielded well on irrigated land, again proving the value of adapted varieties. Considerable re-planting of corn was necessary in eastern areas due to dashing rains following original planting. About 10 per cent of the acreage was started unusually late, and the growing season was cut short by a mid-September freeze which curtailed yields and resulted in some soft corn. There was, however, an above-average quantity of good quality corn in irrigated sections and eastern dry-land areas. Production of corn "for grain" was estimated at roughly 14,000,000 bushels in 1942 compared with 12,000,000 bushels in 1941 and above average. The 1942 crop of all corn was valued at \$16,223,000 against \$10,668,000 for the 1941 crop.

Oats and Barley—The crops of oats and barley were large again in 1942. Although not quite equal to the large 1941 crops, both were materially above average. **Barley** production totalled 15,816,000 bushels, only moderately below the 1941 high record of 16,632,000 bushels. **Oats** production was placed at 5,647,000 bushels against 5,859,000 bushels in 1941. The value of oats and barley was placed at \$12,675,000 compared with \$9,486,000 for 1941 production.

Sorghums—The quantity of all sorghums harvested "for grain" totalled 1,744,000 bushels compared with 2,237,000 bushels harvested in 1941 and 693,000 bushels the 10-year average. Production of sorghum forage of all kinds was also smaller than in 1941 being 542,000 tons against 764,000 tons, but production was materially above average. All of the decrease in sorghum production in 1942 was attributable to a sharp reduction in the acreage planted.

Hay Crops—Production of all **tame hay** in 1942 was estimated at 1,856,000 tons compared with 1,919,000 tons in 1941 and was above average. The **alfalfa** crop (included in all tame hay) of 1,369,000 tons was about equal to 1941 production and slightly above average. **Clover** and **timothy** yielded abundantly again in 1942. **Wild hay** production totalled 420,000 tons against 431,000 tons in 1941 and 325,000 tons the 10-year average. The value of all hay produced in 1942 was placed at \$17,543,000 against \$14,762,000 for 1941 production. The combined production of hay, sorghum forage, corn fodder, and available winter range grass supplied adequate feed of this kind for wintering the 1942-43 inventory of hay-consuming animals.

Fruit Crops—On the whole, 1942 was not a favorable year for fruit production, but even so the commercial **apple** crop of 1,595,000 bushels was moderately larger than the crop of 1941 and slightly above average. Late freeze damage curtailed production in the important western producing area. The Palisade section had an unusually large **peach** crop, but production in the North Fork area was very small due to the late freeze. Production totalled 1,490,000 bushels against 1,516,000 bushels in 1941 and was above average. Quality was exceptionally good and prices high. **Pear** production totalled 177,000 bushels against 175,000 bushels in 1941 and was below average. The **cherry** crop was light being only 3,050 tons against 3,300 tons in 1941 and was also below average.

Broomcorn—The 1942 crop totalled 10,200 tons, the largest crop since 1930, and compares with 9,000 tons, the 1941 crop. Price per ton averaged \$179 and total value almost equalled \$2,000,000.

FLOYD K. REED,

Agricultural Statistician.

REVIEW OF THE 1943 CROP SEASON

(PRELIMINARY ESTIMATES)

Colorado crop and livestock production during 1943, which marked the second war year, set a new high record even exceeding the large 1942 volume. New high production records were set for six important crops—wheat, dry beans, barley, peaches, onions and broomcorn. The potato crop was the second largest harvested in the State. The number of chickens, eggs and hogs marketed was much above the number marketed during any previous year. Milk production was maintained at a high level. Cattle marketings were liberal, yet the cattle inventory continued large.

The acreage of all crops planted or grown in 1943 totalled 6,715,000 acres, an increase of 3.5% from the 1942 total. Although the season had some unfavorable weather aspects, on the whole it may be characterized as favorable. Abandonment of planted acreage was less than usual and 6,232,000 acres of crops were harvested, an area 5% larger than in 1942. The bountiful production in 1943 was partially the result of favorable weather conditions, but also resulted from long hours of toil on the part of farm and ranch operators, who accomplished this record volume of production under considerable handicap in the way of shortage of labor, some items of farm equipment and some transportation difficulties. Colorado agriculture has made an outstanding contribution to the nation's unprecedented war food needs. Costs of production were considerably higher in 1943 than in 1942 and years preceding. Wages paid to hired farm labor were at record levels. Gross income from marketings of crops, livestock and livestock products during 1943 totalled \$308,000,000 in comparison with \$236,000,000 in 1942 and \$201,000,000 in 1929. Although the 1943 income was at a record high, costs of production were also very high, thus restricting net income.

Potatoes—The estimate of production was 18,705,000 bushels, which compares with 17,020,000 bushels harvested in 1942 and 13,213,000 the 10-year (1932-41) average. Only in the year 1922, when 19,040,000 bushels were harvested, did production exceed that of 1943. Quality of the 1943 crop was unusually good and rate of movement to market was unusually rapid. The large production in 1943 was due to the large increase in planted acreage and above average yield per acre. The crop was valued at \$24,316,000 compared with \$19,573,000 for the 1942 crop.

Sugar Beets—The crop was very promising until late August, when dry weather, which continued through digging in October and November, curtailed development. Beets were badly dehydrated in the ground and the dry field condition made harvest difficult. What promised to be a fairly satisfactory tonnage totalled only 1,623,000 tons compared with the large 1942 crop of 2,178,000 tons and the 10-year average of 1,961,000 tons. The small 1943 crop was the result of sharp curtailment of plantings from 195,000 acres to 139,000 acres, of which 133,000 acres were harvested. Yield per acre at 12.2 tons was below average.

Beans—With a record dry bean crop of 3,118,000 one-hundred-pound bags, Colorado ranked as one of the large bean producing states in the country in 1943, being surpassed only by California and Michigan. Acreage planted was the largest of record, but yields on a good many eastern dry land fields were disappointing. Abandonment totalled 88,000 acres and only 507,000 acres were harvested, which compared with 307,000 acres harvested in 1942. Yields were fair to good in irrigated sections and the highest of record in the southwestern dry land section where production exceeded one-half million bags. Production in 1942 was 1,903,000 bags and the 10-year average 1,257,000 bags. The 1943 crop was valued at \$16,530,000 against \$8,319,000 for the 1942 crop.

Wheat—Production was estimated at 31,540,000 bushels of both spring and winter wheat. This estimate exceeded the previous record of 27,406,000 bushels

harvested in 1942 and was nearly three times the 10-year average of 12,061,000 bushels. Winter wheat production in 1943 at 29,381,000 bushels was much the largest of record, part of which resulted from harvesting 200,000 acres of "volunteer" wheat. The average yield per acre of winter wheat harvested from "planted" dry land was almost phenomenal at 25 bushels per acre. The 1943 crop of all wheat was valued at \$39,740,000 against \$28,502,000 for the 1942 crop.

Rye and Dry Peas—Rye production in 1943 was again at a high level with a crop of 1,323,000 bushels against 1,375,000 bushels harvested in 1942, and was nearly four times as large as the 10-year average. The rye acreage has been large in recent years due to restrictions on wheat planting. Production of dry peas totalled 272,000 one-hundred-pound bags against 270,000 bags in 1942 and 129,000 bags the 10-year average.

Corn—Early prospects were excellent, but mid-summer dry weather curtailed production in eastern dry land areas. Irrigated yields were exceptionally high, reflecting the influence of the more general use of hybrid seed. Production of corn for all purposes in 1943 totalled 14,430,000 bushels compared with 18,228,000 bushels harvested in 1942 and 11,199,000 bushels the 10-year average. In 1943, 10,432,000 bushels were harvested "for grain" compared with 13,786,000 bushels so harvested in 1942. Most corn was of good quality. Of the total 1943 crop, approximately 6,000,000 bushels were harvested from irrigated land. The 1943 crop of all corn was valued at \$15,152,000 compared with \$16,223,000 for the 1942 crop.

Oats and Barley—A record barley crop of 17,616,000 bushels was harvested, which compared with 15,816,000 bushels in 1942 and was nearly double the 10-year average of 8,859,000 bushels. Winter barley contributed largely to the production in both 1942 and 1943. Oats production in 1943 was not outstanding, but was well above average with yields quite satisfactory. The crop totalled 5,355,000 bushels against 5,647,000 bushels in 1942 and 4,253,000 bushels the 10-year average. The combined value of oats and barley in 1943 was \$20,767,000 compared with \$12,675,000 in 1942.

Sorghums—The quantity of all sorghums harvested "for grain" totalled 1,707,000 bushels compared with 1,744,000 bushels in 1942 and 1,007,000 bushels the 10-year average. Production of all sorghum forage totalled 377,000 tons against 542,000 tons in 1942 and 363,000 tons for the 10-year average.

Hay Crops—Production of all tame hay was placed at 1,817,000 tons against 1,856,000 tons in 1942 and 1,648,000 tons the 10-year average. The alfalfa crop which is included with all tame hay, was estimated at 1,327,000 tons in 1943, against 1,369,000 tons in 1942. Wild hay production totalled 380,000 tons in 1943, 420,000 tons in 1942 and 332,000 tons the 10-year average. The inventory of hay-consuming animals was relatively large. Hay prices were double those of 1942 and in some areas supplies of hay and rough feed were quite limited in relation to feeding demands. Large quantities of alfalfa hay were sold to mills and dehydrators in 1943, especially in the Arkansas Valley.

Broomcorn—The 1943 broomcorn crop of 11,200 tons was the largest ever harvested in Colorado and amounted to one-third of the nation's total of 32,500 tons. The 1942 Colorado crop was 10,200 tons and the 10-year average 4,590 tons. Value of the 1943 crop was \$2,800,000, and for the 1942 crop was \$1,826,000.

Fruit Crops—The year 1943, like 1942, was not on the whole a favorable one for fruit crops. However, peach production was at a record level with a crop of 1,978,000 bushels which compared with 1,490,000 bushels in 1942 and 1,382,000 bushels the 10-year average. The apple crop was 1,140,000 bushels against 1,595,000 bushels in 1942 and 1,600,000 bushels the 8-year (1934-41) average. Other fruit crops 1943, 1942 and 10-year average were as follows: Pears 184,000; 177,000; and 199,000 bushels. Grapes 400; 500; and 515 tons. All cherries 4,110; 3,050; and 3,415 tons. The sweet cherry crop was particularly large in 1943.

†Farm value based upon an average annual price received by growers obtained by weighting monthly prices received by farmers by estimates of monthly marketings.

*Pounds.

†Planted for all uses.

AGRICULTURAL STATISTICS

CASH FARM INCOME, GOVERNMENT PAYMENTS, AND VALUE OF PRODUCTS CONSUMED ON FARMS WHERE PRODUCED (THOUSAND DOLLARS)

LIVESTOCK INVENTORY AND VALUE

JANUARY 1, 1944, PRELIMINARY AND 1943 REVISED

The number of cattle, hogs and chickens on Colorado farms and ranches increased further during 1943 and on January 1, 1944, was at a new all time high level. Stock sheep numbers again decreased moderately and horses and mules continued the decline which had been under way for nearly 25 years. Milk cows increased slightly. In the aggregate, the number of all livestock was large in relation to the amount of grain and hay available for winter feed. Mild winter weather and open ranges during the early winter favored carrying this large inventory without extreme hardship. Prices of both hay and grain continued high and there were shortages in some areas. Protein supplements were difficult, and in some cases impossible, to obtain. The total value of all livestock combined on January 1, 1944, was \$175,942,000 compared with the near record January 1, 1943, valuation of \$186,647,000. The value per head and total value of each class of livestock except chickens was lower January 1, 1944, than on January 1, 1943. These lower values were a reflection of the higher cost of feed in relation to market values for livestock and a slackening in local demand.

All Cattle and Calves—A record inventory of 1,920,000 head was on hand January 1, 1944, an increase of 10 per cent compared with the January 1, 1943, inventory of 1,745,000 head. The previous high record in cattle numbers was in January, 1919, with 1,881,000 head. On January 1, 1934, the inventory totalled 1,773,000 head. This number declined following the 1934 drouth to 1,400,000 head January 1, 1940. Numbers increased during 1940 and each year following until the present record number was attained. Marketings were large during 1943 but inshipments and the calf crop were also large. Most of the increase in cattle numbers in the last three years has occurred in Eastern Colorado as grass became more plentiful. Inventory value January 1, 1944, \$121,798,000; a year earlier, \$124,407,000. Per head value was \$63.40 and \$71.30.

Milk Cows—The inventory continued at a relatively low level, but at 251,000 head was 1 per cent larger than the January 1, 1943, number of 249,000 head. Milk flow was at a lower level during the 1943-44 winter season than during the 1942-43 winter season as grain rations were reduced. Milk cow values were significantly lower, being \$23,845,000 January 1, 1944, against \$25,647,000 January 1, 1943. Per head values were \$95 and \$103.

Sheep and Lambs—Stock sheep numbers declined 4 per cent during 1943 following a 2 per cent decline during 1942. The January 1, 1944, inventory totalled 1,777,000 against 1,851,000 January 1, 1943, and 1,889,000 the record number of January 1, 1942. The decrease was primarily in mountain and western slope areas. Numbers increased in some of the Eastern Colorado counties. Reasons for the decline were lack of experienced labor, higher costs and fear that supplemental grain and protein feeds could not be obtained. Sheep and lambs in feed lots for market continued at a low level, being 825,000 January 1, 1944, against 860,000 January 1, 1943. Values of all sheep and lambs were lower in January, 1944, than a year earlier, the total value being \$25,712,000 compared with \$29,455,000; value per head \$9.90 against \$10.90.

Hogs—The record hog inventory January 1, 1944, of 774,000 head resulted from farrowing over a million pigs during 1943. The inventory January 1, 1944, was 18 per cent larger compared with the January 1, 1943, inventory of 656,000 head and nearly double the January 1, 1942, inventory of 400,000 head. Market-

ings were large after January 1, 1944, and continued large through the summer months. Hog production was greatly reduced beginning in the spring of 1944. Values were sharply lower. The total value of the January 1, 1944, inventory was \$10,187,000 against \$13,979,000 for the January 1, 1943, inventory. Per head values were \$13.20 and \$21.30. Some weanling and other pigs of light weight were sold at "distress" sale prices.

Horses and Mules—The number of both species continued to decline. Horse numbers January 1, 1944, totalled 205,000 head against 211,000 head a year earlier and were less than half the peak January, 1919, number of 440,000 head. Mule numbers January 1, 1944, and January 1, 1943, were 10,000 and 11,000 head respectively. In 1925, Colorado had 38,000 mules on farms and ranches. Value per head of horses January 1, 1944, was \$58.00 compared with \$64.00 January 1, 1943. Mule values were \$81.00 and \$90.00. The total value of both horses and mules January 1, 1944, was \$12,781,000 compared with \$14,467,000 January 1, 1943.

Poultry—Chicken numbers were at the record level of 5,254,000 birds January 1, 1944, as a result of the record number of chickens raised during 1943. A large percentage of this inventory was hens and pullets of laying age, indicating a high level of egg production during the early months of 1944. The January 1, 1944, inventory was 9 per cent larger than the 4,821,000 inventory January 1, 1943, which was the previous high record. The inventory January 1, 1942, was 3,918,000 birds. Chicken values were higher. For January 1, 1944, total value was \$5,464,000 and the per bird value \$1.04. For January 1, 1943, total value was \$4,339,000 and per bird value \$0.90. Turkeys on hand January 1, 1944, totalled 172,000 birds, the same as a year earlier. The number of hens for breeders at 66,000 was also unchanged. Values were higher, total values being \$860,000 against \$774,000 in 1943.

¹Includes animals "grazed" in transit, but excludes animals "fed" in transit. Animals "grazed" in transit are primarily breeding stock, while animals "fed" in transit are primarily those being fattened for slaughter.

*Indicates approximate location of District for which Counties are given above.

LAND CLASSIFICATION OF COLORADO

-  Irrigated land
-  First class dry farming
-  Second class dry farming
-  Third class dry farming
-  Sand hills
-  National forests
-  National parks
-  Grain crop land
-  Grazing land
-  Forage crop land
