INTRODUCTION PAGES

AGRICULTURAL STATISTICS DISTRICTS

ASD by Number: Northwest and Mountains = 10; Northeast = 20; East Central = 60; Southwest = 70; San Luis Valley = 80; Southeast = 90

COLORADO

The Centennial State, admitted to the Union in 1876, is the eighth largest state in area and has the highest average elevation. The highest point is at Mount Elbert, 14,433 feet above sea level, one of the 53 "fourteeners" rising above 14,000 feet. The lowest elevation is 3,350 feet in extreme eastern Prowers County.

Approximate Land Area: 66.3 Million Acres *
 Approximate Cropland Area: 11.5 Million Acres *
 Approximate Irrigated Area: 2.6 Million Acres *
 Number of Farms and Ranches (2002): 31,400
 Land in Farms and Ranches (2002): 31.1 Million Acres
 Average Size of Farm and Ranch (2002): 991 Acres

Farms by Type *

87% Individual
 6.7% Partnership
 5.2% Corporate
 1.1% Other

Farms By Tenure *

66% Full Owners
 26% Part Owners
 8% Tenants

Farms By Class *

60% Livestock & Poultry
 40% Crops

* 2002 Census of Agriculture

Farm Marketing Receipts (2003):	\$ 4,963.8	Million
Livestock & Livestock Products:	\$ 3,675.7	Million (74.1% of the total)
Field, Fruit, & Vegetable Crops:	\$1,288.1	Million (25.9% of the total)

July, 2005

Dear Friends:

Once again, it is my pleasure to introduce this 2005 Colorado Agricultural Statistics Bulletin.

The data in this book is collected and prepared by the Colorado Agricultural Statistics Service in conjunction with the Colorado Department of Agriculture. This ongoing federal-state partnership makes possible the full array of information in this bulletin for use by farmers, ranchers, local governments, agribusiness owners and other organizations who rely on up to date information about rural Colorado.

The importance of reliable and current data about Colorado agriculture cannot be overstated. Agriculture is a changing industry nationwide and in Colorado as well. Agriculture is no longer just another segment of Colorado's economy. Instead, farmers and ranchers represent the largest segment of caretakers of the state's soil and water resources. Many other segments of Colorado's society are interested in how these resources benefit the state's economy, environment, lifestyle and culture.

As a farmer and rancher myself, I'm proud of this industry and the legacy that agriculture has contributed to Colorado. Agriculture creates thousands of jobs for non-farm citizens, it produces food and fiber of the highest quality in the world, and it provides open spaces for environmental quality and wildlife habitat. Our urban neighbors are becoming increasingly aware of the importance of our industry, and the data in this bulletin is proof of our productivity and the sheer magnitude of farming and ranching in Colorado.

As our industry continues to change, the importance of the reliable data developed by the Colorado Agricultural Statistics Service will grow. I want to thank them and the thousands of Colorado farmers and ranchers who take the time to answer the surveys and provide CASS with the information that makes this bulletin possible.

Sincerely,

Don Ament
Commissioner

TABLE OF CONTENTS

Colorado's rank in agriculture	2
Farms and land in farms by Economic Class	3
Crop record highs and lows for acreage, yield and production	4
Livestock record highs and lows for inventory by class	5
FIELD CROPS:	
Principal crops; Historic acreage, production, and value	6
2004 Crop review	18
District and county estimates by crop:	
All wheat	22
Corn for grain	34
Corn for silage	46
Barley	56
Oats	68
Sorghum for grain	77
Sunflowers	89
Dry beans	107
Sugar beets	120
Potatoes; also disposition and stocks	123
Hay crops	125
Grain and hay stocks	161
Barley and wheat varieties	164
Monthly Marketing Percents, selected crops	166
FRUITS, VEGETABLES, AND MISCELLANEOUS:	
Fruit crops - 2004 review	167
Fruit production and value	168
Vegetable crops - 2004 review	169
Vegetable acreage, production, and value	170
Planting and harvesting dates	172
Floriculture	173
Precipitation, monthly and annual averages by district	175
FARM INCOME AND PRICES:	
Farm income and cash receipts	176
Farm Real Estate: Value and cash rent per acre by type of land	181
Grazing Fees for cattle	181
Marketing year average prices by commodity	182
Annual and monthly prices received by commodity	183
LIVESTOCK AND POULTRY:	
2004 Livestock review	187
Inventories by class	189
Livestock operations by size group	190
Wool production and value	191
Feedlots and fed cattle marketings	191
Cattle and calves: Inventory value and inventory by class	192
Sheep and lambs: Inventory value and inventory by class	193
Hogs and pigs: Inventory value and inventory by class	194
Bees and honey; Trout	195
Cattle on feed	196
Production, disposition, and income by species	198
Livestock slaughter by species	199
District and county estimates:	
All cattle and calves	200
Beef cows	202
Milk cows	204
Dairy and dairy products	206
Chickens and eggs	208
COUNTY PROFILES - Agricultural highlights for each county	210
INFORMATION CONTACTS - Colorado Department of Agriculture	234
INDEX	235

Rank in Agriculture: Colorado's rank among states, 2004

Commodity	Unit	Colorado		Leading State		United States
		Rank	Production	State	Production	
FIELD CROPS:						
Barley	1,000 bu.	5	9,086	North Dakota	91,760	279,253

CROP REVIEW 2004

The estimated value of production for Colorado's principal field crops (excluding sugarbeets) totaled just over \$1.03 billion in 2004, down 9 percent from the comparable value of \$1.13 billion in 2003. The value of production from the State's four leading crops (corn, hay, wheat and potatoes) totaled \$921.3 million for the 2004 crops and accounted for 89.4 percent of the total value from all crops (excluding sugarbeets). The severe drought conditions during 2002 and 2003 improved somewhat in 2004 and resulted in higher production than the previous year for each crop except wheat, alfalfa hay and potatoes. The dry growing season was accompanied with milder temperatures but water shortages continued into 2004, especially along the South Platte River, the southeast and in the San Luis Valley. Harvest of late season crops including hay was hampered by frequent rains and mild temperatures that delayed dry down. The harvest of corn, sorghum and millet continued well into 2005.

Corn was the leading crop produced in the State in terms of total value of production. The combined value of corn for grain and corn for silage was estimated at \$356.3 million for the 2004 crop, up nearly 5 percent from the comparable value of \$340.8 million for the 2003 crop. Corn for grain production increased 17 percent from a year earlier with a 17 percent increase in acres harvested. Average yields were unchanged from last year's crop. The 2004 corn for grain crop was valued at \$301.9 million, representing 29.3 percent of the total value from all crops excluding sugar beets. A 31 percent increase in production for corn silage in 2004 resulted in a total value of production of \$54.5 million, up 31 percent from the value of the 2003 crop as producers received an average price equal to last year's.

Hay was Colorado's second leading crop in value of production. The value of all hay production dropped 8 percent from the previous year to \$292.5 million but still accounted for 28.4 percent of the total value from all crops produced excluding sugarbeets. Value of the 2004 alfalfa hay crop, at \$216.0 million, was down 1 percent from the previous year with a slight drop in both acreage harvested and the average price received. The value of production for all other hay decreased 23 percent to \$76.5 million as a 28 percent drop in the average price received more than offset a 7 percent increase in production.

Wheat retained the third place ranking in value of production for 2004 with a total value of nearly \$150.0 million, down 42 percent from the \$260.1 million value assigned to the 2003 crop. The value of the winter wheat crop, at \$146.9 million, was down 43 percent while the value of the spring wheat crop declined 31 percent to \$3.1 million. The 2004 winter wheat crop of 45.9 million bushels was down 43 percent from the 2003 crop, the result of extremely dry conditions that raised abandonment and lowered average yields. Spring wheat production was down 31 percent from last year to \$3.1 million as a 50 percent drop in acreage planted more than offset a 75 percent increase in average yield per acre.

Potatoes ranked fourth in terms of value of production with the 2004 crop value estimated at \$122.5 million, up 3 percent from \$119.3 million received for the 2003 crop. The summer potato crop was 8 percent smaller than the 2003 crop and the fall potato

crop declined 2 percent from the previous year. The forecasted average price received rose 5% and offset the lower production figures.

The **dry edible bean** crop produced in 2004 was valued at \$28.3 million, up 33 percent from the previous year. Harvested acreage was down 6,000 acres (8 percent) from the previous year to 67,000 acres in 2004. Total production of 1.04 million cwt was down 11 percent from the 2004 crop. However, prices received for the latest crop are expected to average \$27.20 per cwt, up \$9.00 per cwt from the average of \$18.20 per cwt received for the previous year's crop.

The 2004 **barley** crop has an estimated value of \$25.9 million, down 5 percent from the 2003 crop value of \$27.3 million. Producers harvested 6 percent less acres than a year earlier, but averaged a 118.0 bushel per acre yield, 9.0 bushels above the previous year and a new record high for the State. Producers received slightly lower prices for the latest crop.

Sugarbeet production totaled 838,000 tons in 2004, up 30 percent from the 2003 crop of 644,000 tons. The 33,500 acres harvested represented an increase of 22 percent from the previous year. The 2003 crop was valued at \$24.7 million but no value has yet been determined for the 2004 crop.

Proso millet production in 2004 had an estimated value of \$21.4 million, up 46 percent from the value of the 2003 crop. Producers harvested 330,000 acres of proso millet in 2004 compared to 285,000 acres in 2003. Total production, at 7.9 million bushels, was 46 percent larger than the 2003 crop. Average yield, at 24.0 bushels per acre, was 5.0 bushels higher than last year. Prices for the 2004 crop averaged \$2.70 per bushel, unchanged from the 2003 crop.

The 2004 crop of **sunflowers** was valued at \$18.4 million, up 35 percent from the 2003 crop value of \$13.6 million. A 4 percent increase in acres harvested and higher yields resulted in a 19 percent increase in production. Production of oil varieties, at 108.3 million pounds, was up 27 percent from that of a year earlier. Non-oil production increased 16 percent to 38.7 million pounds. Value of the oil crop is estimated at \$12.1 million and the non-oil crop has an estimated value of \$6.3 million.

The combined production of **grain and silage sorghum** had an estimated value of \$14.4 million for the 2004 crop compared with \$13.7 million the previous year. Sorghum for grain production in 2004 totaled 5.4 million bushels, up 25 percent from a year earlier as producers harvested 13 percent more acres and realized a 3.0 bushel increase in the average yield. Total value of production of grain sorghum totaled \$9.2 million compared with \$10.0 million the previous year as the average price received dropped 59 cents per bushel. Sorghum silage production, at 266,000 tons, increased 27 percent from 2003. Total value of the 2004 crop was estimated at \$5.2 million, up 41 percent from the \$3.7 million crop produced in 2003.

The value of **oat** production in Colorado for the 2004 crop totaled \$2.0 million, equal to the 2003 crop. Production, at 1.1 million bushels, was 13 percent above the 975,000 attained in 2003.

Field Crops: Acreage, production and value, Colorado, 1999-2000

Year and Crop	Acreage planted	Acreage harvested	Yield per acre	Total production	Unit	Value per unit	Total value

FRUIT, VEGETABLES AND MISCELLANEOUS

Colorado Fruit Crops – 2004

Value of Production and Percent of Total

(Value in \$1,000)

FRUIT CROPS - 2004

Fruit production in Colorado during 2004 totaled 59.4 million pounds, up 21 percent from the 49.0 million pounds produced a year earlier. Larger crops than a year earlier were produced for apple and peaches while smaller crops were produced for pears and tart cherries. Producers were able to make efficient use of limited water supplies to meet most needs and did not experience any major adverse weather problems during the season. Utilized production of Colorado's four fruit crops had a combined value of \$18.5 million for 2004, up 3 percent from \$17.9 million a year earlier. Producers received lower prices per unit for each 2004 fruit except for apples.

The leading fruit crop produced in the State was **peaches** for the 2004 season in terms of value of production but ranked second in terms of total production. The 13,000 tons produced was up 24 percent from the previous year and was the largest crop since 1973. However, the value of the 12,000 tons of product utilized decreased 7 percent from the previous year to \$11.33 million. Producers received an average price of \$944 per ton for the latest crop compared with \$1,220 per ton for the 10,000 tons of utilized production from the 2003 crop.

Apples ranked first in terms of total production but second in terms of value for the 2004 crop. The total production of 28.0 million pounds in 2004 was up 33 percent from the 22.0 million pounds produced in 2003. Higher per acre yields more than offset a small reduction in bearing acreage. The utilized production of 27.0 million pounds was valued at \$5.75 million, up 48 percent from the \$3.88 million received for the 21.0 million pounds of utilized production from the 2003 crop. Grower prices averaged 21.3 cents per pound for the 2004 crop compared with 18.5 cents in 2003.

The 2004 **pear** crop totaled 2,600 tons, down 7 percent from 2,800 tons produced in 2003. Producers received \$561 per ton for their 2004 crop compared with \$600 per ton in 2003, dropping the total value to \$1.40 million, down 16 percent from the previous year.

Tart cherry production in 2004 totaled 200,000 pounds, half as much as the 400,000 pounds produced in 2003. The 2004 crop was valued at \$42,000, down 72 percent from the \$152,000 value of 2003's crop.

1/ In certain years, production includes some quantities not harvested because of economic conditions which are excluded in computing values.

2/ Beginning in 1998, price excludes any value added ingredients, processing or alteration of the raw product.

Colorado Vegetable Crops – 2004

Value of Production and Percent of Total

(Value in \$1,000)

VEGETABLE CROPS - 2004

Vegetable growers in Colorado harvested 10.5 million cwt of produce from six fresh market crops during 2004 which had a total value of \$110.6 million. This was up 22 percent from the \$90.4 million received for the 8.1 million cwt of vegetables produced from the same crops in 2003. Production for all crops except carrots and cantaloupe increased from 2003. Comparisons with last year range from a 48 percent increase in onion production to an 11 percent decrease in cantaloupe. Acreage and production estimates are prepared for seven vegetable crops. Spinach statistics were not published in 2004 to avoid disclosure of individual operations. Numerous other vegetable crops are produced in the state but are not surveyed for acreage and production data.

Dry storage onions continue to be the leading vegetable crop produced in the State. The total output from the 2004 crop totaled 5.5 million cwt, up 48 percent from the previous year. The harvested area increased 15 percent to 11,000 acres and the average yield of 500 cwt per acre was 115 cwt above the 2003 average. The quantity of onions expected to be marketed had an estimated value of \$55.0 million compared with \$48.5 million received for the 2003 crop. Onions represented 52 percent of the total production and 50 percent of the total value from the six crops.

Sweet corn, the second largest vegetable crop produced in the State, accounted for 13 percent of the total production and 15 percent of the total value. Production increased 9 percent from 2003 to 1.4 million cwt. The 9,300 acres harvested was up 22 percent but the average

yield of 150 cwt per acre declined 20 cwt per acre from the previous year. Value of the 2004 crop, at \$16.3 million, was 39 percent above a year earlier.

Cabbage ranked second in production and third in value. Production increased 41 percent from 2003 to 1.6 million cwt, the result of increases in both acreage and per acre yields. The value of production, at \$15.4 million, was up 44 percent from a year earlier.

Carrots were the fourth leading vegetable crop, accounting for 10 percent of the total production and 10 percent of the total value. Harvested acreage was down 29 percent from last year to 1,700 acres but average yield rose 150 cwt per acre to 630 cwt per acre as production declined 7 percent to 1.07 million cwt. The total value of the crop was down 6 percent to \$11.14 million.

Lettuce had the fifth highest production and ranked fifth in value of production. Production increased 35 percent from a year earlier to 704,000 cwt. In addition, the value of production, at \$8.8 million, was 53 percent above the previous year as growers received an average \$1.50 per cwt more in 2004.

Cantaloupe ranked sixth in both production and value. Harvested area increased 100 acres from the previous year to 1,700, but per acre yields decreased 16 percent to 160 cwt as production fell 11 percent to 272,000 cwt. Value also declined to \$3.9 million from \$4.8 million last year as the average price per cwt received fell \$1.40 to \$14.50.

Vegetables: Acreage, production and value, Colorado, 1994-2004

Total All Plants ^{4/}	58	71,122

^{1/} The data in the table represents production and sales only from operations with sales of \$100,000 or more. During 2003 there were 132 operations that had sales of \$10,000 or more. The **total covered growing area** for all 132 operations of 10,621,000 square feet consisted of the following: 726,000 square feet of glass; 6,646,000 square feet of fiberglass and other rigid greenhouses; 3,058,000 square feet of film plastic (single/multiple) greenhouses; 191,000 square feet of shade and temporary cover. In addition, plants were produced on 59 acres of **open ground**. The estimated value of sales at wholesale from all 132 operations totaled \$93,957,000 in 2003.

^{2/} For potted plants, price represents a weighted average for plants sold in pots less than 5 inches and in pots 5 inches or more.

^{3/} Value based on equivalent wholesale value of all sales for all crops except potted foliage plants which are based on net value of sales.

^{4/} The sum of the values for individual items may not add to the group total because some data is not published separately to avoid disclosure.

PRICES RECEIVED BY FARMERS

Prices received by farmers and ranchers provide a basis for calculating the income from the Agricultural Sector as part of the National Income Accounts. These data are also extensively used to analyze past and current marketing patterns and to make current and future marketing decisions. Prices received for major farm commodities are used in computing the Index of Prices Received by Farmers, an important indicator of the economic environment of the nation's agricultural producers.

Marketing year average prices, by commodity, Colorado, 1996-2004

LIVESTOCK AND POULTRY

LIVESTOCK REVIEW 2004

SUMMARY: Colorado farmers and ranchers had 2.50 million head of all cattle and calves on hand as of January 1, 2005, up 4 percent from the 2.40 million on hand one year earlier. The total inventory of all sheep and lambs as of January 1, 2005 was up 1 percent from the previous year to 365,000 head. The December 1, 2004 inventory of all hogs and pigs increased 7 percent from a year earlier to 800,000 head. The December 1, 2004 inventory of all chickens was down 2 percent from last year to 4.99 million birds.

Colorado ranks 10th in the number of all cattle and calves, 5th in the number of all sheep and lambs, 15th in the number of all hogs and pigs, and 23th in the number of all chickens. The state also ranks as the 4th largest cattle feeder with annual marketings of more than two million head of fed cattle. Colorado ranks 3rd in the number of market sheep and lambs, but is first in the nation in the number of lambs slaughtered at 795,000, or 16% of the U.S. total.

The state's dairy cow numbers remain relatively steady while the number of operations with milk cows continues to decline. The number of bee colonies and honey production continue to decline towards record or near record lows.

The total inventory value of the cattle, sheep, hogs, and chickens on hand at the beginning of the year (using the January 1 and December 1 reference dates) was \$2.63 billion, up 4 percent from the comparable value of \$2.31 billion one year earlier. The value per head averaged higher than the previous year for all the major livestock groups.

The extreme drought conditions that impacted most of the state for the last several years abated somewhat during 2004. Pasture and range feed conditions were rated 61% very poor to fair at the start of the season in mid-March, as compared to 91% for these same categories in 2003. Conditions improved following a series of April storms that brought welcome precipitation to the Front Range and the Eastern Plains. This moisture kept range and pasture conditions in mostly fair to good conditions through May. June showed some decline in conditions until some late June storms boosted the pasture conditions up into the fair to excellent categories. Range and pasture conditions stayed fairly stable after June due to a number of timely rains in July, August and September. Early season grazing prospects for 2005 are much improved due to above average winter snowfall and precipitation in most areas of the state.

CATTLE AND CALVES: Colorado farm and ranch operators had 2.50 million head of all cattle and calves on hand as of January 1, 2005, up 4 percent from the 2.40 million head on hand one year earlier. The total inventory included 1.10 million head of cattle and calves on feed for the slaughter market as of January 1, 2005, up 4 percent from the previous year. The number of cattle and calves on feed at the beginning of this year represented 44.0 percent of the total inventory compared with 44.2 percent one year earlier. More than 98 percent of the total number on feed (1,080,000 head) were in 164 feedlots that have a capacity of 1,000 head or more. In addition, there were 20,000 head of cattle

and calves on feed on 96 operations having a feedlot with a capacity of less than 1,000 head. Total marketings of fed cattle from all feedlots in the state for 2004 totaled 2,115,000 head, down 8 percent from the previous year and 22 percent below the record high of 2,725,000 head marketed during 2000.

The total number of all cows that have calved, at 740,000 head, increased 4 percent from 710,000 head a year earlier. The number of beef cows increased 4 percent from the previous year to 639,000 head. The number of milk cows that calved increased 3% to 101,000 head.

The state's dairy herd produced 2.18 billion pounds of milk during the year, making Colorado the 19th largest milk producing state in the nation. The average production per cow, at 21,412 pounds, was exceeded only by Washington, Arizona, and Idaho, which averaged 22,852 pounds, 22,788 pounds, and 21,446 pounds, respectively.

There were 750,000 heifers weighing 500 pounds and over on hand at the beginning of this year, up 4 percent from a year earlier. Of that total, 130,000 were being kept for beef cow replacement (up 37 percent), and 50,000 were for milk cow replacement (up 11 percent). The remaining 570,000 were other heifers (down 2 percent) of which 410,000 were on feed for the slaughter market.

The January 1, 2005 inventory also included 840,000 head of steers weighing 500 pounds or more (up 2 percent) and 665,000 of those were on feed for the slaughter market. The number of bulls weighing 500 pounds or more increased 14 percent from a year earlier to 40,000 head. The number of calves (steers, heifers, and bulls under 500 pounds) on hand January 1, 2005, at 130,000 head, was up 13 percent from the 115,000 on hand the previous year.

The 2004 calf crop in Colorado, at 740,000 head, was up 1 percent from the 2003 calf crop. The larger calf crop and increase in beef cows indicate a rebuilding of herds after several years of drought conditions.

The total inventory value of all cattle and calves in Colorado as of January 1, 2005 was \$2.50 billion, 13 percent above the \$2.21 billion for January 1, 2004. The average value of \$1000 per head represented an increase of \$80 per head from the previous year and was \$230 more than the 2003 value per head.

The number of operations with cattle at any time during 2004 was down 6 percent from the previous year to 13,000. The number of beef cow operations was also down 6 percent to 9,800 and the number of milk cow operations in 2004 declined 4 percent to 670, down 30 operations from the previous year.

SHEEP AND LAMBS: The January 1, 2005 inventory of all sheep and lambs in Colorado totaled 365,000 head, up 1 percent from the number on hand as of January 1, 2004. The number of

breeding sheep and lambs, at 170,000, was unchanged from the previous year. The number of market sheep and lambs increased 3 percent to 195,000. The number of replacement lambs increased 5 percent to 30,000 head. The number of ewes one year old and older declined 3 percent to 135,000 head, the number of rams one year old and older remained steady at 5,000 head, no change from the previous year.

Of the 195,000 head of market sheep and lambs, 1,000 head were market sheep and 194,000 head were market lambs. There were 2,000 lambs weighing less than 65 pounds this year, the same number as a year earlier; 6,000 were in the 65-84 pound weight group, up 2,000 from the previous year; 39,000 weighed 85-105 pounds compared with 18,000 last year; and 147,000 weighed over 105 pounds compared with the 165,000 head in this weight group on January 1, 2004.

The 2004 lamb crop, at 165,000 head, was down 8 percent from the 2003 lamb crop of 180,000. The number of operations with sheep in Colorado during 2004, at 1,600, declined 6 percent (100 operations) from the previous year.

Wool production in Colorado during 2004 totaled 2.57 million pounds, down marginally from 2.58 million pounds produced in 2003. The number of all sheep and lambs shorn, at 390,000 head, was up 8 percent from 360,000 head shorn a year earlier. The value of wool production for 2004 totaled \$2.19 million, up 14 percent from a year earlier as producers received 85 cents per pound of wool sold compared with 74 cents per pound the previous year and 57 cents from 2002.

The January 1, 2005 inventory value of all sheep and lambs in Colorado was estimated at \$46.36 million, up 11 percent from a year earlier. The overall average value per head for all sheep and lambs was \$127.00 per head, \$11.00 per head higher than a year earlier.

HOGS AND PIGS: Colorado's inventory of all hogs and pigs as of December 1, 2004 totaled 800,000 head, up 7 percent from a year earlier. This is the first December to December increase in inventory in five years. The latest inventory consisted of 140,000 breeding hogs and pigs, up 4 percent from the 135,000 on hand one year earlier. The number of market hogs and pigs, at 660,000, increased 7 percent from the previous year.

The 2004 pig crop in Colorado totaled 2.39 million head, virtually no change from 2003. Sows farrowed during 2004 totaled 287,000, up 2 percent from last year. The average litter size of 8.31 pigs in 2004 was down from 8.49 a year earlier. There were 750 operations with hogs in Colorado during 2004, down from 800 the previous year. About 93% of the hogs in Colorado are being raised by 2% of the operations. This trend is replicated throughout the United States.

The December 1, 2004 inventory value of all hogs and pigs was \$76.0 million, a startling increase of 58% above the comparable value as of December 1, 2003. The average value of \$95.00 per head was \$31.00 per head above the previous year.

CHICKENS AND EGGS: The all chicken inventory in Colorado as of December 1, 2004 totaled 4.99 million birds, down 2 percent from the 5.10 million on hand one year earlier. The number of layers decreased 8 percent from the previous year to 3.96 million. The total inventory also included 967,000 pullets less than 20 weeks of age (up 21 percent from December 1, 2003). The remaining inventory of 64,000 other chickens represented an increase of 23 percent from the previous year in that category.

During the period December 1, 2003 through November 30, 2004, Colorado laying flocks produced 1.105 billion eggs. This was up 3 percent from the 1.073 billion eggs produced during the comparable period a year earlier. The value of production from these eggs produced in 2004 totaled \$60.10 million, or 65.3 cents per dozen, compared to \$59.92 million, or 67.0 cents per dozen in 2003. The number of layers averaged 3.96 million for the year, up 3 percent from 3.85 million layers during the same period a year earlier. The annual average laying rate for the latest year was 279 eggs per layer compared with 278 eggs per layer one year earlier.

The December 1, 2004 inventory value of all chickens was estimated at \$9.98 million, up 3 percent from \$9.69 million a year earlier. The average value per bird, at \$2.00, was 10 cents per bird higher than the December 1, 2003 value per bird.

BEES AND HONEY: The number of colonies in Colorado during 2004 dropped from a year earlier to 23,000. The total honey production of 1.84 million pounds for 2004 was 11 percent lower than the 2.06 million pounds a year earlier, but was 28% higher than the 2002 production. The yield per colony decreased from 86 pounds per colony in 2003 to 80 pounds per colony in 2004.

The total value of the 2004 honey crop was \$2.72 million, down 6 percent from \$2.89 million the previous year. The average price received for the 2004 crop was \$1.48 per pound, compared with \$1.40 per pound received for the 2003 crop. December 15, 2004 honey stocks of 791,000 pounds were up 10 percent from 722,000 pounds a year earlier.

TROUT: Nine operations in Colorado sold trout for the direct consumer market during 2004, while 21 operations in the state raised trout to sell for restoration, conservation and recreational purposes. Direct trout sales totaled \$870,000, down sharply from the \$2.13 million sold in 2003. The distribution market had sales valued at \$5.39 million, down 7% from 2003. The total value of the trout sold during 2004 was \$6.26 million, down 21 percent from the comparable value of \$7.92 million a year earlier. There were 1.48 million pounds of fish of all sizes distributed during 2004, which had an average value of \$3.64 per pound compared with 1.36 million pounds distributed during 2003 at an average of \$4.28 per pound.

COLORADO COUNTY PROFILES 2004

The information contained on the following County Profiles pages is taken from the latest Census of Agriculture and the latest county data available for specific commodities.

The Census of Agriculture is taken every five years and provides the most comprehensive detailed information about the agricultural industry for each county. More details for a specific county are available on the Internet at: <http://www.nass.usda.gov/census> From that location, details can be obtained for every State and County in the Nation with options for viewing, printing and downloading of specific data.

County data for specific commodities is prepared annually and is presented in the second column of the County Profile. More detailed information about the county data is available on other pages in this issue of *Colorado Agricultural Statistics*.

099	Prowers
101	Pueblo

^{1/} Broomfield County was established in November 2001 and was formed from portions of Adams County, Boulder County and Jefferson County. As with the City and County of Denver, the new area will be referenced as the City and County of Broomfield. No Census data is available for Broomfield County and no county data for specific commodities will be shown for either Denver County or Broomfield County. While there is known to be a few agricultural operations in each of the two counties, as with a few other counties in the state, the agricultural data in the minor counties is combined with an adjoining county to avoid disclosure of individual operations.

Colorado County Profiles 2004

Adams County		County 001	ASD 60	Acres
