Florida Department of Agriculture
and Consumer Services

Charles H. Bronson, Commissioner

Dear Friends of Agriculture,

It is my pleasure to present the 2008 Florida Agriculture Statistical Directory. This report presents a wealth of information about Florida's vast and varied agricultural production through data that details land use, crop yields, commodity prices, crop rankings and more. This yearly report is invaluable to anyone who is involved in this dynamic business or who wants to better understand its complexities.

The tables, charts and statistics contained in this report do an exceptional job of measuring the inputs and outputs, and presenting Florida agriculture in the context of "hard numbers." But there is more to our state's agricultural industry: our hard-working farmers, whose dedication, hard work and perseverance have made Florida agriculture into the diverse and highly productive industry that is respected throughout the globe.

As evidenced by the ever-growing popularity of the "Fresh from Florida" label, consumers worldwide appreciate and seek out the quality products that our farmers provide.

Maintaining these standards of excellence seldom comes easily as each year presents new challenges for Florida's 40,000 commercial farmers. But, whether confronted by hurricanes, freezes, pests, diseases or fierce international competition, our state's producers continually show that they are up to the test. Enterprising spirit, love of the land, and pride in their products are all hallmarks of the well-earned reputation of Florida's farmers.

In addition to enjoying the quality products that our farmers produce, Florida's agricultural production benefits our state's residents in other important ways as well. Florida agriculture has an overall economic impact estimated at more than \$100 billion annually, making it a sound pillar of the state's economy. Florida agriculture is directly and indirectly responsible for 763,065 jobs and adds \$3.58 billion to state and local tax rolls.

The Florida Department of Agriculture and Consumer Services works diligently to promote our state's agricultural production and to help ensure the safety of these products from the field to the table. Our quality assurance and food safety programs help assure consumers of the wholesomeness of Florida agricultural products.

I sincerely thank you for your support of Florida's farmers and encourage you to look for the "Fresh from Florida" label when shopping.

Sincerely,

Charles H. Bronson
Commissioner of Agriculture

ACKNOWLEDGMENT

The acreage, production, and value statistics in this publication are the official State and USDA estimates prepared by the National Agricultural Statistics Service (NASS), Florida Field Office in cooperation with the Florida Department of Agriculture and Consumer Services (FDACS). These estimates are effective as of May 2009 and can be revised later in the year or in the following year, if and when additional data become available. Any revisions made to these estimates, as well as estimates made after May 2009, are included in reports posted to the website shown below and available from the NASS Florida Field Office.

Most of the data used to develop these estimates were provided voluntarily by growers, shippers, and processors and we sincerely appreciate their public spirited cooperation. The Florida Tomato Committee, the Florida Fruit and Vegetable Association, floriculture and nursery producers, sales agencies, and transportation firms have provided valuable assistance and data throughout the season. The FDACS Bureau of State Farmers Markets and the County Agricultural Agents of the University of Florida Cooperative Extension Service were also very helpful in supplying area and county estimates.

The individuals and organizations who make up the Florida agricultural industry need reliable and accurate estimates of production to make informed and knowledgeable decisions. Increasing unpredictability of commodity prices and competition from global markets make accurate and unbiased estimates even more important. Farmers, agribusinesses, producers groups, educators, researchers, legislators and the media all need these estimates to develop sound policies and to promote Florida agricultural products.

I want to express my sincere gratitude to our dedicated staff of statisticians, support personnel, and field and telephone enumerators. They are the ones who have worked hard to collect, review, and summarize these important data and publish the results.

All NASS reports are available free of charge at:

Jeff Geuder
Director, USDA/NASS – Florida Field Office

About the Florida Agriculture Statistical Directory

The Florida Agriculture Statistical Directory has been published to provide you with reliable, comprehensive information and data on Florida agriculture. People worldwide use the basics of food, fiber, and forestry products daily. Florida's producers contribute mightily to the bounty enjoyed in Florida, the United States, and beyond. The following pages tell their story of productivity, innovation and delivery.

This reference book is divided by sections for ease of use. The Agricultural Overview Section provides a general overview of Florida agriculture. The Agricultural Statistics Section presents comparative performances of major commodity groups and benchmark economic data.

Occasionally, numbers in rows or columns do not sum exactly. This usually occurs when large numbers are abbreviated or when composite prices are compiled. The difference in these cases is a rounding margin. The rounding of numbers occurs in these pages when space is a consideration.

The Groups Directory Section offers contact information for a variety of agricultural related entities. Both public and private organizations are listed. The Department Contacts Section identifies the Florida Department of Agriculture and Consumers Services' divisions with contact information.

Together, these sections provide a view of Florida agriculture and its impact on Florida's economy. If you need additional information, please call the Division of Marketing and Development at 850-488-4366.

We are pleased to present the **Florida Agriculture Statistical Directory**. This book will provide excellent reference data year round. Keep it handy.

FLORIDA AGRICULTURAL OVERVIEW

Florida's 47,500 **commercial farms**, utilizing 9.25 million **acres**, continue to produce a wide variety of safe and dependable food products. From the **citrus groves** and the **nurseries** in central and southern Florida, to the **vegetables** in regions around the State, to the **cattle and calves** throughout the State, these farms provide Florida with a large and stable economic base.

In 2008 Florida ranked:

- ✓ 1st in the U.S. in the value of production of **oranges, grapefruit, tangerines, and sugarcane for sugar and seed.**^{1/}
- ✓ 1st in value of production of: **fresh market snap beans, fresh market tomatoes, cucumbers for fresh market, squash, watermelons and sweet corn.**
- ✓ 2nd in value of production of **strawberries, bell peppers, and cucumbers for pickles.**
- ✓ 4th in value of production of **honey.**

In 2008, in terms of total value of production, Florida accounted for:

- 71 percent of the total U.S. value for **oranges** (\$1.5 billion)
- 68 percent of the total U.S. value for **grapefruit** (\$179 million)
- 52 percent of the total U.S. value **snap beans** (\$172 million)
- 27 percent of the total U.S. value for **tangerines** (\$58 million)
- 51 percent of the total U.S. value for **sugarcane for sugar and seed** (\$448 million)^{1/}
- 44 percent of the total U.S. value for **fresh market tomatoes** (\$622 million)
- 40 percent of the total U.S. value for **bell peppers** (\$267 million)
- 39 percent of the total U.S. value for **cucumbers for fresh market** (\$94 million)
- 29 percent of the total U.S. value for **watermelons** (\$140 million)
- 21 percent of the total U.S. value for **sweet corn** (\$157 million)

The total cash receipts for **nursery and greenhouse** products in Florida were just over \$1.9 billion in 2007.

Livestock and livestock products in 2007 produced sales of \$1.5 billion, with \$461 million coming from sales of **dairy products** and \$449 million coming from sales of **meat animals**. **Poultry farms** generated \$367 million in sales, with \$183 million coming from **broilers** and \$186 million coming from **eggs**.

Florida growers harvested **vegetables for fresh market** from 188,100 acres in 2008, with sales exceeding \$1.5 billion.

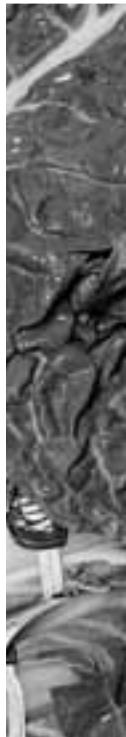

Florida citrus growers in 2007-2008 produced 170.2 million boxes of **oranges** (97 percent of which were used for **orange juice**) and 26.6 million boxes of **grapefruit** (60 percent of which were used for **grapefruit juice**).

On January 1, 2009 there were 1.70 million **head of cattle** on farms and ranches in Florida, including 942,000 head of **beef cows** and 118,000 head of **milk cows**.

Florida ranked 11th in the number of **chickens** on farms in 2007, Florida's poultry farmers maintained an average of 10.8 million **layers** in 2007 (producing 2.9 billion **eggs**) and produced 73.3 million **broilers**.

^{1/} Data for 2007, the latest year available.

Florida **Cash Receipts**

Receipts from Florida agricultural products amounted to \$7.7 billion, a 6% increase from the previous year

FLORIDA CASH RECEIPTS – 2007

The Economic Research Service, USDA, reports that receipts from Florida agricultural products in 2007 amounted to \$7.7 billion. This is a 6 percent increase from the previous year, with revised cash receipts totaling \$7.2 billion. Cash receipts from all crops increased 5 percent from 2006, while cash receipts from all livestock and livestock products increased by 14 percent.

Receipts from all crops accounted for 80.9 percent of all cash receipts. As in previous years, the leading crop commodities were oranges (15.4 percent of all cash receipts), foliage and floriculture (12 percent), tomatoes (6.1 percent), and sugarcane (5.8 percent). The leading livestock commodities were cattle and calves (5.9 percent of all cash receipts), milk (6.0 percent), and chicken eggs (2.4 percent).

NASS has revised 2007 Value of Production estimates based on data received from the 2007 Census of Agriculture. This publication includes those revised estimates. The Economic Research Service will update the 2007 Cash Receipts data in August 2009. Due to publication deadlines, the updated 2007 Cash Receipts data are not included in this publication.

FLORIDA AGRICULTURE CASH RECEIPTS, 2007

Farms and Land in Farms

The number of farms in Florida has increased by 2,500 in the past 10 years

FARMS AND LAND IN FARMS

Florida had 47,500 commercial farms in 2008, using a total of 9,250,000 acres. There were 5,300 farms with sales exceeding \$100,000. The average farm size was 195 acres. The number of farms in Florida has increased by 2,500 over the past 10 years. Florida ranks 20th among all States in number of farms and tied at 30th in land in farms.

FLORIDA FARMS AND ACREAGE

By year and by economic sales class

Year	Number of farms				Total acres				Average farm size
	Total	\$1,000 - \$9,999	\$10,000 - \$99,999	\$100,000 & over	Total	\$1,000 - \$9,999	\$10,000 - \$99,999	\$100,000 & over

NET FARM INCOME	3,319,096	2,325,969	1,911,182

^{1/} Value of agricultural sector production is the gross value of the commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

Citrus

Florida accounted for 70% of all citrus produced in the United States last year

2007-08 SEASON CITRUS HIGHLIGHTS

U.S. AND FLORIDA PRODUCTION

U.S. citrus utilized production for the 2007-08 season is 13.0 million tons, up 24 percent from the 2006-07 season but 27 percent lower than the record high production of 17.8 million tons for the 1997-98 season. Florida accounted for 70 percent the total; California totaled 27 percent, and Texas and Arizona produced the remaining 3 percent.

Production of Florida citrus in the 2007-08 season is 203.8 million boxes, up 26 percent from the previous season. The primary reason for the increase is higher fruit per tree on all varieties. The average fruit per tree is 52 percent higher on early-midseason oranges (excluding Navels), and 59 percent higher on Valencias. The average fruit per tree on white grapefruit is the highest since the 1992-93 season, and on colored grapefruit higher than the previous three seasons.

The all orange crop production, at 170.2 million boxes is up 32 percent. Early-midseason-Navel orange production is up 27 percent, Valencia production had a 37 percent increase. All grapefruit production at 26.6 million boxes is 2.2 percent less than the 2006-07 season. Increases in production were recorded for all types of specialty fruit.

CITRUS BOX WEIGHTS

TX	85	80	--	--	--
AZ	75	67	75	76	--

^{1/} Includes Temples and tangelos at 90 pounds.

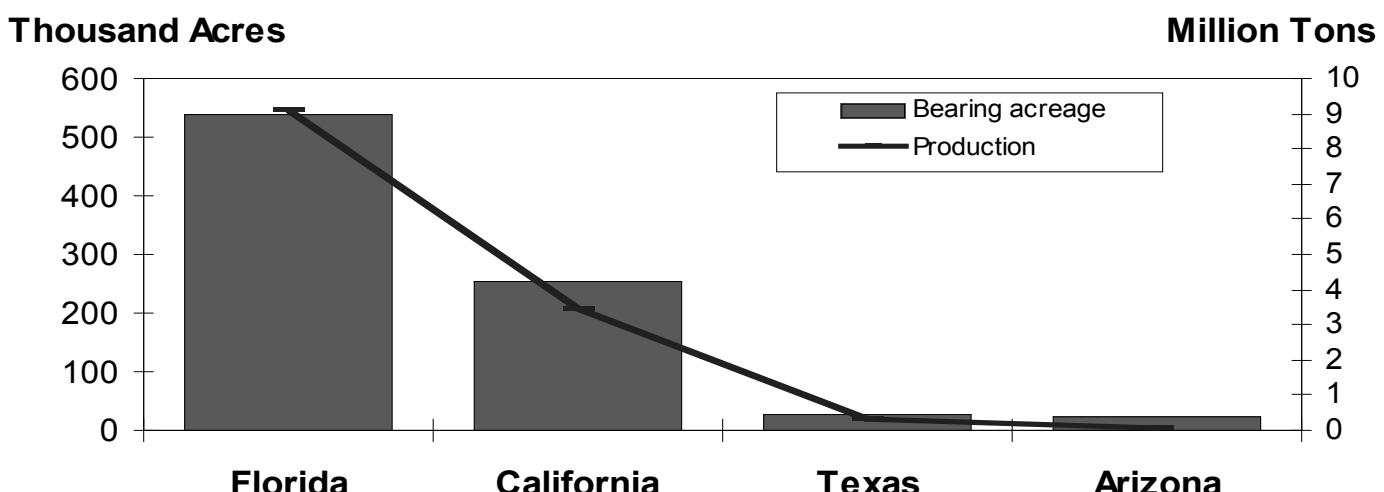

TREE CENSUS

Total citrus acreage was reduced to 576,577 and is currently the lowest since record keeping began with the 1966 tree inventory. Since the year 2000, total acreage has declined nearly 31 percent or the equivalent of 255,698 acres. Polk County has 81,375 acres, the most acreage of any county. Hendry, Highlands, and DeSoto follow with over 60,000 acres each.

All citrus trees are down 8 percent from 81,909,000 in 2006 to 75,376,100 in 2008. Of the total, oranges comprise 87 percent, grapefruit 8 percent, and the remainder includes specialty and other citrus. Since 2006, bearing trees decreased 7.2 percent to 71,000,600 while nonbearing trees declined 19.5 percent to 4,375,500.

The decrease in both acres and trees since the 2006 tree inventory is a direct result of increased urban development, tree removals due to citrus canker and greening diseases, abandonment of non-productive groves, and two planned water reservoirs located in major citrus producing areas.

LEADING CITRUS STATES: BEARING ACREAGE AND PRODUCTION, CROP YEAR 2007-08

PRODUCTION BY AREAS AND COUNTIES

Total citrus production in 2007-08 was up in all Florida commercial citrus production areas from the 2006-07 season. The Central and Western areas had the largest gains with increases of 16.2 million and 10.8 million boxes.

Production in the top four counties increased by 33 percent. Together, they produced 50 percent of all citrus. Polk led with 31.0 million boxes, Hendry had 24.4 million boxes. Highlands followed closely with 24.1 million boxes, and DeSoto completed the four with 22.0 million boxes. Gains were recorded in 28 counties with only Hillsborough and Palm Beach producing less citrus.

Leading orange producers were Polk at 27.1 million boxes, followed by Highlands at 22.7 million boxes and Hendry at 22.5 million boxes. Desoto came in fourth again this season at over 21.6 million boxes. The four counties combined accounted for 55 percent of the State's total oranges. Indian River and St. Lucie far surpassed all other counties in grapefruit production, with nearly 18 million boxes combined. Together, they accounted for 67 percent of the State's grapefruit crop.

The Central area produced 39 percent of the State's tangerines and 37 percent of the tangelos. The Southern area produced the second highest specialty crop, accounting for 28 percent of the tangerines and 17 percent of the tangelos.

VALUE

The value of the 2007-08 U.S. citrus crop is up 2 percent from last season, to \$3.22 billion (packinghouse-door equivalent). Total value of production for 2007-08 is lower for the orange, tangelo, and grapefruit crops but higher for the lemon, tangerine and mandarin crops. Orange value of production decreased 4 percent, grapefruit value decreased 15 percent, and tangelo value is down 36 percent from the previous season. Tangerine and mandarin value of production increased 40 percent from last season, and lemon value of production increased 31 percent. Beginning with the 2006-07 season, Temple production and value are included in the early-mid-Navel component of Florida's orange estimates.

Florida's \$1.2 billion (on-tree equivalent) preliminary value of the 2007-08 citrus crop is down 19 percent from the 2006-07 season's revised record value crop of \$1.5 billion. The price per box and on-tree value of production is lower on all varieties. Tangelos suffered the largest decreases with price per box down 69 percent and value of production down 63 percent. The all orange price per box decreased 39 percent, tangerines are down 46 percent, but the grapefruit price per box is less than four percent lower.

Preliminary value is based on that part of the crop priced at harvest, which accounts for all of the fresh fruit and about 40 percent of the processed. Nearly one-half of the processed oranges were priced but the figure for processed grapefruit and tangerines is about one-quarter of the total.

FLORIDA CITRUS:

Value of sales on-tree, crop years 1998-99 through 2007-08

Crop year ^{1/}	Value	Crop year ^{1/}	Value
	1,000 dollars		1,000 dollars
1998-99	1,097,253	2003-04	891,500

^{1/} Excludes lemons beginning crop year 2003-04.

^{2/} Revised.

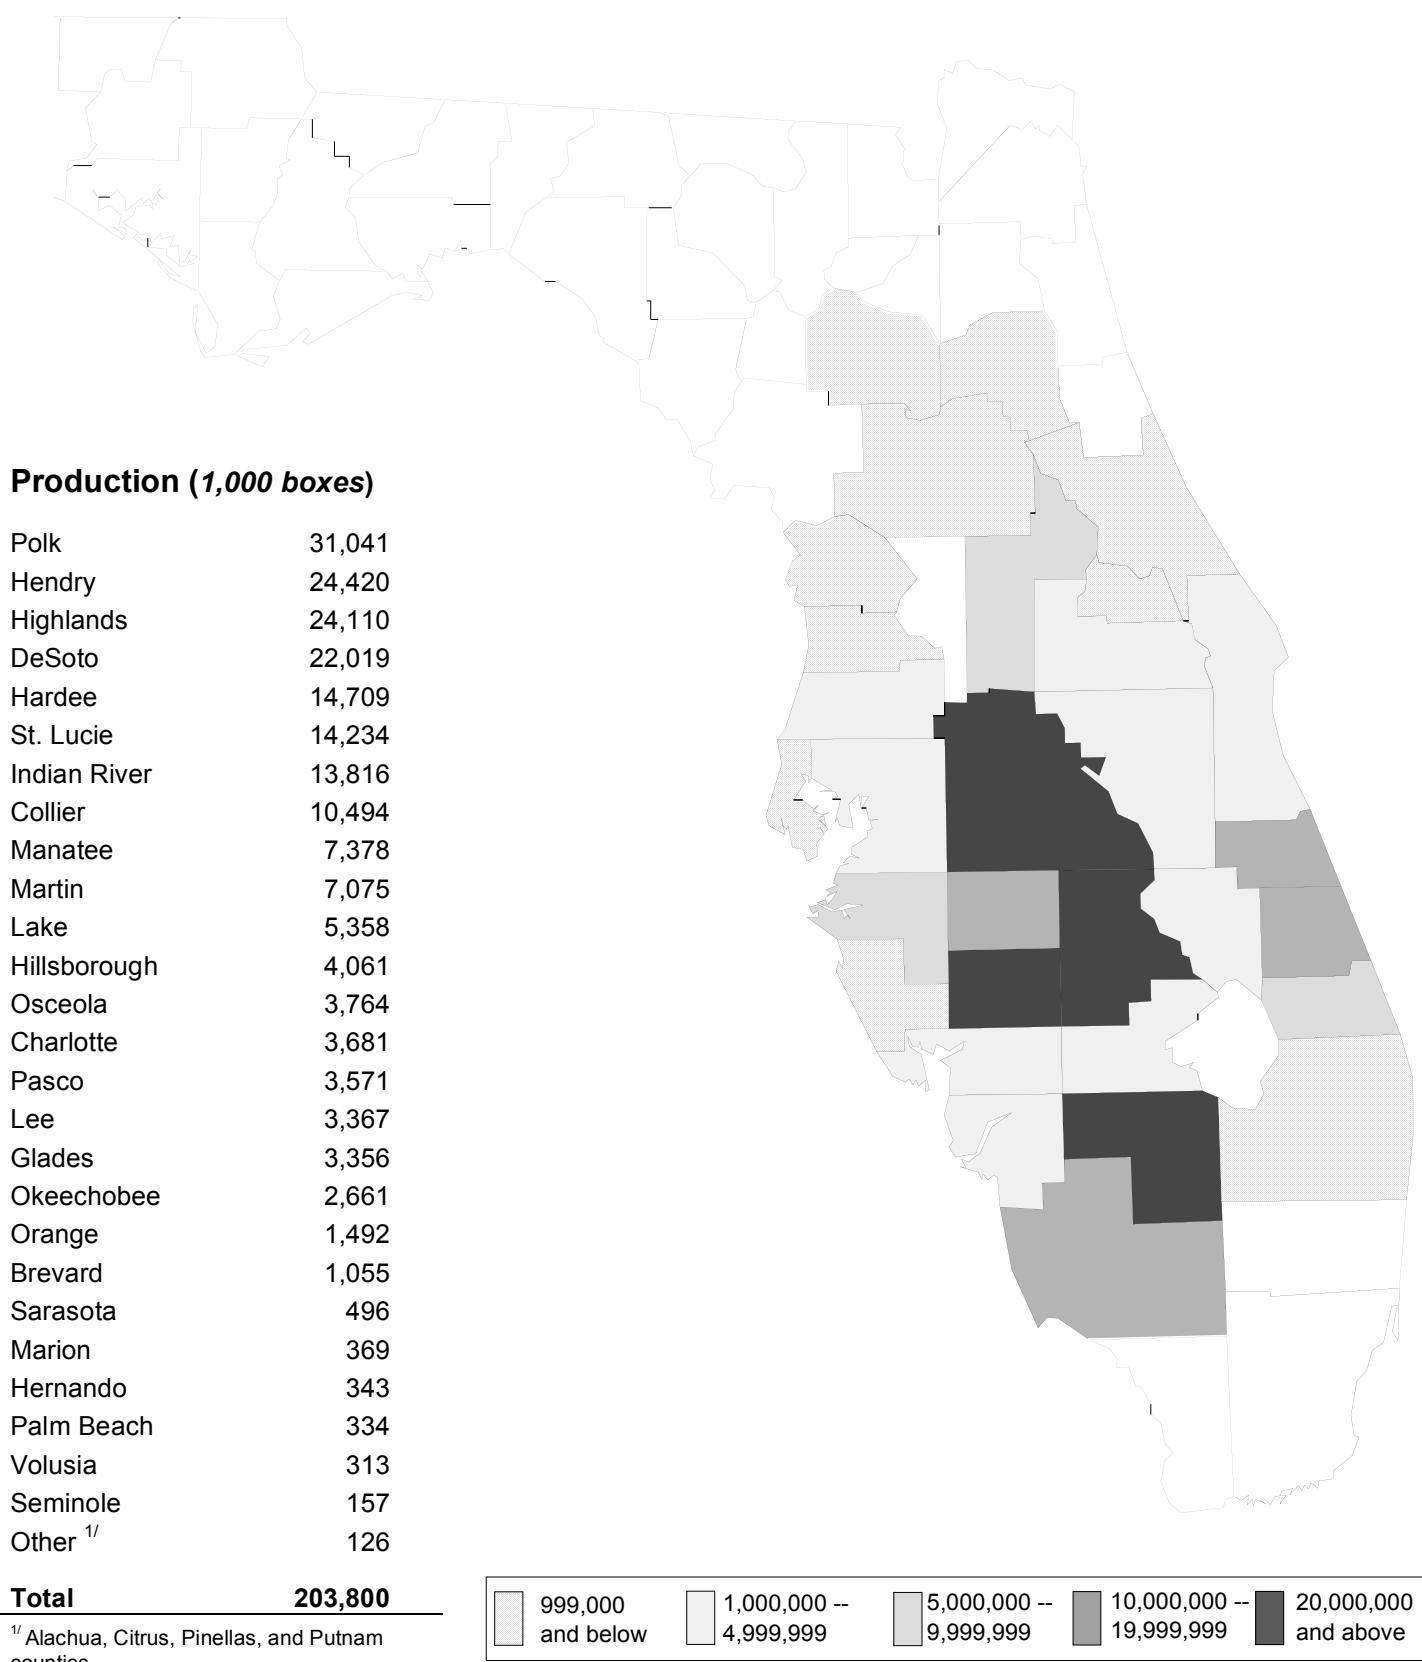

^{3/} Preliminary.

FOREIGN EXPORTS AND FROZEN CONCENTRATE

Fresh fruit exports totaled 14.8 million 4/5 bushel cartons. Japan accounted for the majority of Florida grapefruit. Canada received the most of Florida's orange and specialty fresh fruit exports.

A total of 10.1 million gallons of FCOJ (Frozen Concentrated Orange Juice), and 7.6 million gallons of FCGJ (Frozen Concentrated Grapefruit Juice) were exported in the 2007-08 season. Final FCOJ yield, reported by the Florida Department of Citrus, set record highs for all oranges (1.67274 gallons per box) and late oranges (1.79034), but was lower than the previous season for early-midseason fruit (1.55335). The final tangerine yield (FCTJ) was up (1.47635) and the final grapefruit yield (FCGJ) was down (1.31020).

FLORIDA CITRUS HARVESTING SEASON

AVOCADOS

Total production of avocados has rebounded from the 2005-06 hurricane affected crop and at 1,100,000 bushels is more than twice the amount of last season. Bearing acreage, estimated at 7,000 acres, is up 8 percent. The price per bushel at \$11.00 is lower than the previous nine seasons listed, bringing the total value of the crop to \$12,100,000. More than two dozen minor tropical fruits are grown in South Florida. These varieties, sold mostly on the local fresh market, include annona, banana, carambola (star fruit), Barbados cherry, coconut, guava, jaboticaba, jackfruit, key lime, kumquat, litchi, longan, mango, monstera, papaya, passion fruit, plantain, pummelo, sapodilla, black sapote, mamey sapote, white sapote, and wax jambu.

^{1/} Hurricane Wilma affected production.

Field **Crops**

Acreage harvested for field crops in 2008
was up 3% and totaled 592,000 acres

2008 FIELD CROPS HIGHLIGHTS

VALUE

The 2008 value of production for hay, peanuts, cotton and cottonseed, corn, pecans, soybeans, and wheat totaled \$283,292,000, an increase of \$55,596,000 or 24 percent from the revised 2007 value of production of \$227,696,000. Cotton was the only field crop for which the value of production declined in 2008.

ACREAGE AND PRODUCTION

Acreage harvested for field crop production (excluding sugarcane) in 2008 was up 3 percent and totaled 592,000 acres. This was an increase of 16,000 acres from the revised 576,000 acres harvested in 2007. Harvested hay acreage was down 20,000 and cotton decreased 16,000 acres. Harvested acres of peanuts were up 21,000. Soybean and wheat acres harvested more than doubled in 2008 and were up 242 and 256 percent, respectively.

SUGARCANE

The value for the 2007 crop of sugarcane was set at \$426,600,000, up slightly from \$425,324,000 in 2006. Production was up 2 percent in 2007 at 14,520,000 tons. Yield was up 0.2 ton at 36.3 tons to the acre.

CROP WEATHER

As **January** began, farmers prepared crops for freezing temperatures. Potato planting continued in the tri-county area of Putnam, Flagler, and St. Johns counties, but growers took precautions by storing seed potatoes in barns with heaters. Unusually cold temperatures caused damage to small grains. Field activity slowed due to frost. Sugarcane harvesting remained active in the Everglades region. Although the long drought was interrupted mid-month by heavy rain across the State, water levels were still very low. Hay supplies and quality were suffering due to cold temperatures and insufficient rain.

Field work continued in early **February** as occasional rains improved soil moisture conditions in some areas of the Panhandle. Potato planting was steady in central Florida while harvesting began for some counties in the southern Peninsula. Hay supply was very low in parts of the Panhandle. Growers in south Florida harvested sugarcane. Winter wheat planting wrapped up. Late February showers soaked the western Panhandle and had some negative effects on wheat. Freezing temperatures caused some damage to Flagler County potatoes.

Soil moisture levels in the Panhandle were mostly adequate to surplus in the beginning of **March**. Fields were very wet and little farming was underway. Hay was in short supply in many areas. The local potato crop looked good in northeast Florida and was blooming by late March. Some growers decided not to plant cotton or corn due to the high cost of fuel and fertilizer. Recent wet weather in Santa Rosa County negatively impacted the late-planted winter wheat crop. By the end of March, dry and clear conditions allowed land preparations for field crop planting.

The significant rains in early **April** elevated soil moisture supplies. Most of the corn crop was harvested in the Panhandle while some producers in the Big Bend planted acres as well. Cool temperatures slowed plant germination and growth during the week of April 14-20. The potato harvest was underway in the Hastings area. Warm, dry daytime temperatures and scarce rain in late April increased the need for irrigation of the late-maturing crops in many fields. Peanut planting began in parts of the Panhandle and cotton planting began where fields had sufficient moisture.

Extreme drought conditions combined with gusty wind increased the danger of wildfire outbreaks during **May**. Several crop acres were stressed due to lack of rain. Hay was made where possible, but dry conditions left the crop in short supply. Acres of the cotton crop were replanted in areas of the Panhandle due to inadequate moisture.

Warm, dry, and windy conditions continued in early **June**. Many growers utilized irrigation systems. Wind damage affected a small percentage of the wheat acreage in the Panhandle. The drought persisted during the first half of June which continued to affect all field crops. Growers welcomed significant showers mid to late June. Peanuts were planted mostly ahead of schedule.

Rainfall continued as **July** began and conditions for most crops improved further. The central and southern regions of Florida received significant precipitation. Throughout the Panhandle however, rain showers were occurring, but less frequently. The lighter precipitation encouraged crops, but soils quickly returned to dry. Cotton in Washington and Jackson counties was doing well; however, cotton planted late was growing slowly. During mid-month, Pasco County reported relatively large amounts of hay being baled. By late July, small quantities of hay were being baled in Marion County. In Hendry County, hay was in good

condition. Rain continued to fall across the State. Some areas reported receiving almost too much precipitation. The peanut crop was being treated for tobacco worms, but 79% of peanuts were rated good or excellent as of July 27. As cotton emerged, growers practiced weed control. Sugarcane that went dormant from the stress of spring drought, worked to return to normal.

Early **August** began with showers covering most areas of the Sunshine State. The peanut crop progressed on schedule and most were rated good to excellent. Mid-month brought drier conditions for the Panhandle and Big Bend areas. Growers used irrigation when available. Santa Rosa County reported stress on the cotton due to dry conditions. Hay baling picked up in Marion County. Rainfall returned to the Panhandle and crop condition once again improved. Cotton, corn, and soybeans were mostly in good condition. Tropical Storm Fay caused excessive rainfall and flooding in many parts of the State. Many fields had standing water and flooding which halted field work. The corn harvest was delayed until moisture levels lowered. The end of the month brought more heavy rainfall to the already saturated eastern half of the central Peninsula counties. Flooding in Nassau County damaged the cotton crop. Jackson County cotton growers reported hard lock and boll rot. Standing water prevented hay baling in many fields. Other areas reported that water was draining quickly and damage from the tropical storm was minimal.

Although rain was not plentiful for northern Florida in early **September**, some fields were still very wet and trying to dry out from Tropical Storm Fay. A few growers reported losses. Several areas were not affected by winds or flooding and as a result, expected good yields. Corn harvesting wrapped up and peanut harvesting began around mid-month. The occasional shower delayed field work, but the rain was needed for most locations. Growers began harvesting cotton towards the end of the month. By the last week of September, peanut condition was rated 34% fair, 53% good, and 13% excellent. Peanut digging was 30% completed compared to 22% in 2007.

Fields in northern counties were dry in early **October**. The harvesting of peanuts continued despite some delays from extremely dry soils. Cotton and soybean growers began harvesting. During the second week of October significant rain fell on the north and central regions of the State. Some peanut growers reported that cool nights slowed the maturing of their crop that remained in the ground. Soil moisture quickly returned to dry in most of the Panhandle, delaying some winter grains from being planted. Towards the end of October, beneficial rains revisited the Panhandle and southern area. Sugarcane harvest had just begun.

By **November** 1st peanut digging was approximately 90% complete, compared to 87% at this time in 2007. Clear skies aided field work for most regions. Cotton growers continued to harvest, with over half of the crop picked from the fields. Okaloosa County growers reported that they were cutting soybeans. Rye and other small grains emerged. Soil moisture levels were mostly short to adequate. Around mid-month, rain caused some field work delays in the Panhandle but relieved dry conditions. Cotton, soybeans, peanuts, corn, and hay harvests were nearly finished. Sugarcane harvest remained active.

Wheat was planted in the Panhandle during the first part of **December**. Most cotton harvesting wrapped up. In mid-December the Panhandle received over four inches of rain which helped most fields. The end of December was mostly dry, but pest and disease concerns remained. Sugarcane was harvested in south Florida. Some potato growers were preparing land, while others had already begun planting.

PLANTING AND HARVESTING SEASONS OF SELECTED FLORIDA FIELD CROPS

* Palm Beach, Hendry and Glades

Florida Agricultural Statistics Districts

Livestock

As of January 1, 2009 all cattle and calves
in Florida, including dairy cattle
totaled 1.7 million head

LIVESTOCK HIGHLIGHTS

DAIRY

Florida dairies produced 2.06 billion pounds of milk in 2008, down from 2.11 billion pounds produced during 2007. Annual milk production per cow was 17,167 pounds, up from 16,622 pounds per cow in 2007. On January 1, 2009, there were 118,000 milk cows on Florida farms and commercial dairies, down from 120,000, milk cows a year earlier. The top ranking counties for dairy cattle on January 1, 2009, were Okeechobee and Gilchrist, with Hardee and Lafayette sharing third place. Florida ranked 16th among States in number of milk cows, the same rank held in 2007.

Cash receipts from marketings of Florida milk in 2008 totaled \$464 million, up from \$459 million in 2007. In 2008, the price of replacement milk cows peaked in July at \$2,350 per head. The annual average farm-gate price for milk in Florida was \$22.60 per hundredweight in 2008, up from \$21.90 in 2007. Production of regular ice cream in Florida was 16,900,000 gallons in 2008, and low fat ice cream production was 16,674,000 gallons.

Beef

All cattle and calves on Florida farms and ranches as of January 1, 2009, including dairy cattle, totaled 1,700,000 head, down 10,000 from 2008. The three top ranking counties for cattle were Okeechobee, Osceola, and Polk counties. Beef cows in Florida were 942,000 head, up 2,000 head from 2008. Nationally, Florida ranked 10th in beef cows and 18th in total cattle. Calves born during 2008 totaled 880,000 down 20,000 head from 2007.

The average annual beef price of cattle marketed in Florida in 2008 was \$70.70 per hundredweight, down from \$76.40 per hundredweight in 2007. The average price for calves in 2008 was \$98.90 per hundredweight, down from \$112.00 per hundredweight in 2007. Cash receipts from cattle and calf marketings were \$405 million, down from \$449 million in 2007.

Poultry

Hens and pullets of laying age on farms in December 2008 were 10.4 million birds, compared to 10.9 million birds in December 2007. Florida egg production, in the production year of December 1, 2007 to November 30, 2008, was 2,749 million eggs, a decrease from the previous year's production of 2,885 million eggs.

The total value of Florida egg production in 2008 was \$235 million, up from \$186 million in 2007. . The increased value was due mainly to an increase in the price of table eggs. The average annual price for eggs (hatching and table eggs, combined) was 102.0 cents per dozen, up from 77.6 cents per dozen in 2007. . The value of broilers produced in Florida during 2008 totaled \$169 million, down from \$180 million a year earlier. The average annual price of broilers in 2008 was 52.0 cents per pound, an increase from 43.0 cents per pound in 2007.

Florida liveweight broiler production in 2008 totaled 376 million pounds, down from 418 million pounds produced in 2007. Broilers raised in Florida during 2008 totaled 63.8 million birds, down from 73.3 million birds in 2007.

Hogs

The average market year price in 2008 was \$39.40 per hundredweight, down from \$39.10 per hundredweight in 2007. The price of hogs peaked in June at \$51.40 per hundredweight, and the lowest monthly price was \$29.70 per hundredweight in January. There were 82,700 head slaughtered in 2008, down from 88,400 head in 2007.

Vegetables ***Melons and Berries***

The 2007-08 value of production for the seven major vegetable crops totaled over \$1.98 billion, up 9% over the previous year

2007-08 SEASON VEGETABLES HIGHLIGHTS

VALUE

The 2007-08 value of production for the seven major vegetable crops, potatoes, berries, and watermelons totaled \$1,984,680,000, up 9 percent from the 2006-07 value of \$1,809,302,000. Sweet corn, bell peppers, squash, tomatoes, and blueberries showed increases in the value of production for 2007-08 from the 2006-07 crop, while snap beans, cabbage, cucumbers, potatoes, and strawberries were showing declines from the previous season. Watermelons were virtually unchanged from last year.

ACREAGE

Harvested acreage of the seven major vegetable crops, potatoes, berries, and watermelons, totaled 225,900 acres during the 2007-08 crop season, up 3,300 acres or 1 percent above last season. Cabbage, sweet corn, cucumbers, squash, watermelons, potatoes, strawberries, and blueberries all had increased acreage in 2007-08. Snap beans, bell peppers, and tomatoes declined from the previous season.

PRODUCTION

Production of the seven major vegetable crops, potatoes, berries, and watermelons totaled 52,306,000 cwt. during the 2007-08 growing season, down 728,000 cwt. or 1 percent below the previous year. Sharp production declines in snap beans, strawberries, and tomatoes more than offset increases of the remaining commodities. Tomato yield was affected by reduced demand from salmonella scare. Strawberry yield was near normal but was well below the record crop from the previous season.

WEATHER

In **July**, vegetable harvest was nearly finished for most crops. Adequate rainfall and warm temperatures left crops in good condition. By early **August**, vegetable producers were busy preparing land for fall planting. Field work came to an end late August when Tropical Storm Fay brought excessive rainfall and flooding to many parts of the State. Sod farms reported substantial losses. Vegetable growers lost crops and limb breakage decreased pecan production. Rain was plentiful in early **September**. Some fields were still very wet and trying to dry out. Mid-September allowed excellent weather for field progress and vegetable planting was underway in Hernando, Highland, and Hardee counties. Fields in northern counties were dry in early **October**. Significant showers fell over the northern and central regions bringing concerns of disease to some producers. Conditions were dry and cool in early **November**. Dade County began harvesting snap beans while Gadsden County continued harvesting tomatoes. The production of cucumber, melons, and squash in the central Peninsula slowed due to cold weather. Growers reported slowed growth in **December** due to cool temperatures and frost. Light volumes of strawberries began moving through the market. Light volumes of cabbage were harvested and the okra market declined seasonally. **January** began with mostly dry conditions and more rain was still needed. Potatoes were planted in St. Johns, Putnam, and Flagler counties. Lee County plowed under damaged potato plants. Warm temperatures and showers came in late January. **February** had warmer temperatures early in the month followed by freeze. Scattered showers were received mostly in the Panhandle and Big Bend while other areas were in much need of precipitation. Several counties pushed planting back due to the freezes. Watermelon fields were in final preparation in Alachua County and cabbage harvesting continued in St. Johns County. **March** had very little rain allowing field work to progress, but hindering most crops. Vegetables looked good, but production was slow due to drought and cold stress. Growers prepared fields in the northern regions for spring vegetables early in the month, but spring vegetables in the southern region were already planted. Scattered showers fell late March, but accumulation barely eased drought conditions. The final week of March brought heavy rain and flooding to the Panhandle. Field work was delayed in early **April** due to heavy rains, but field preparation took place for caladiums in Highlands County. Potato harvest continued in the tri-county area and corn was planted in Escambia County. Sugarcane harvest ended for the season. Strawberry harvest ended in Hillsborough County, but continued in Washington and Bradford counties. Growers began cutting watermelons in the southern Peninsula. Very little rain was recorded throughout Florida during **May** and dry soil conditions remained. Peanut and cotton planting continued with the recent lack of rain allowing growers to progress field activity. Blueberries were harvested in Hardee County. Most broccoli harvesting was finished and some cabbage remained in the tri-county area. Growers used irrigation to keep their vegetables in good condition. The season was over for some growers in southern Florida while northern area producers just began.

DEFINITIONS AND EXPLANATIONS

PLANTED ACREAGE is the total acreage which has been planted for harvest during the crop year. Acreage lost and replanted to the same crop in time for harvest in the same quarter is counted only once. Acreage harvested and planted again to the same crop is counted twice.

HARVESTED ACREAGE is the acreage partially or completely harvested. Acreage lost before or at maturity through natural or economic causes is not included in the acreage for harvest.

YIELD is the average production per harvested acre of merchantable quality harvested and sold or utilized for human consumption.

PRODUCTION is the quantity actually harvested and sold or utilized for human consumption.

UNIT VALUE for fresh market sales is the equivalent price received, f.o.b. shipping point basis and encompasses all grades and sizes marketed or utilized. Included are packing charges, selling charges, precooling, top ice, or other costs which contribute to the value of the product at shipping point. The value per unit for quantities sold to processors is the average value paid for usable quantities, on a "delivered to plant door" basis. This value includes transportation and other normal costs incident to delivery at plant door.

TOTAL VALUE is the equivalent value of production sold or utilized based on the unit value. Cullage and other quantities not sold or utilized because of natural or economic factors are excluded.

OTHER COUNTIES include harvested acreage for all counties for which either published data would result in the disclosure of individual operations or acreage totals for specific commodities of minor importance in the State.

PRODUCTION AND PRICE UNIT--The official USDA vegetable crop estimates are published on a weight basis. For this bulletin, the official estimates for most vegetable crops have been converted to what is believed to be the most commonly used containers. If changes in container weights are necessary, all data pertaining to the production of the commodity in question are revised to maintain comparability between years. The table below gives the net weight used per container and the number of containers per hundredweight for Florida produce.

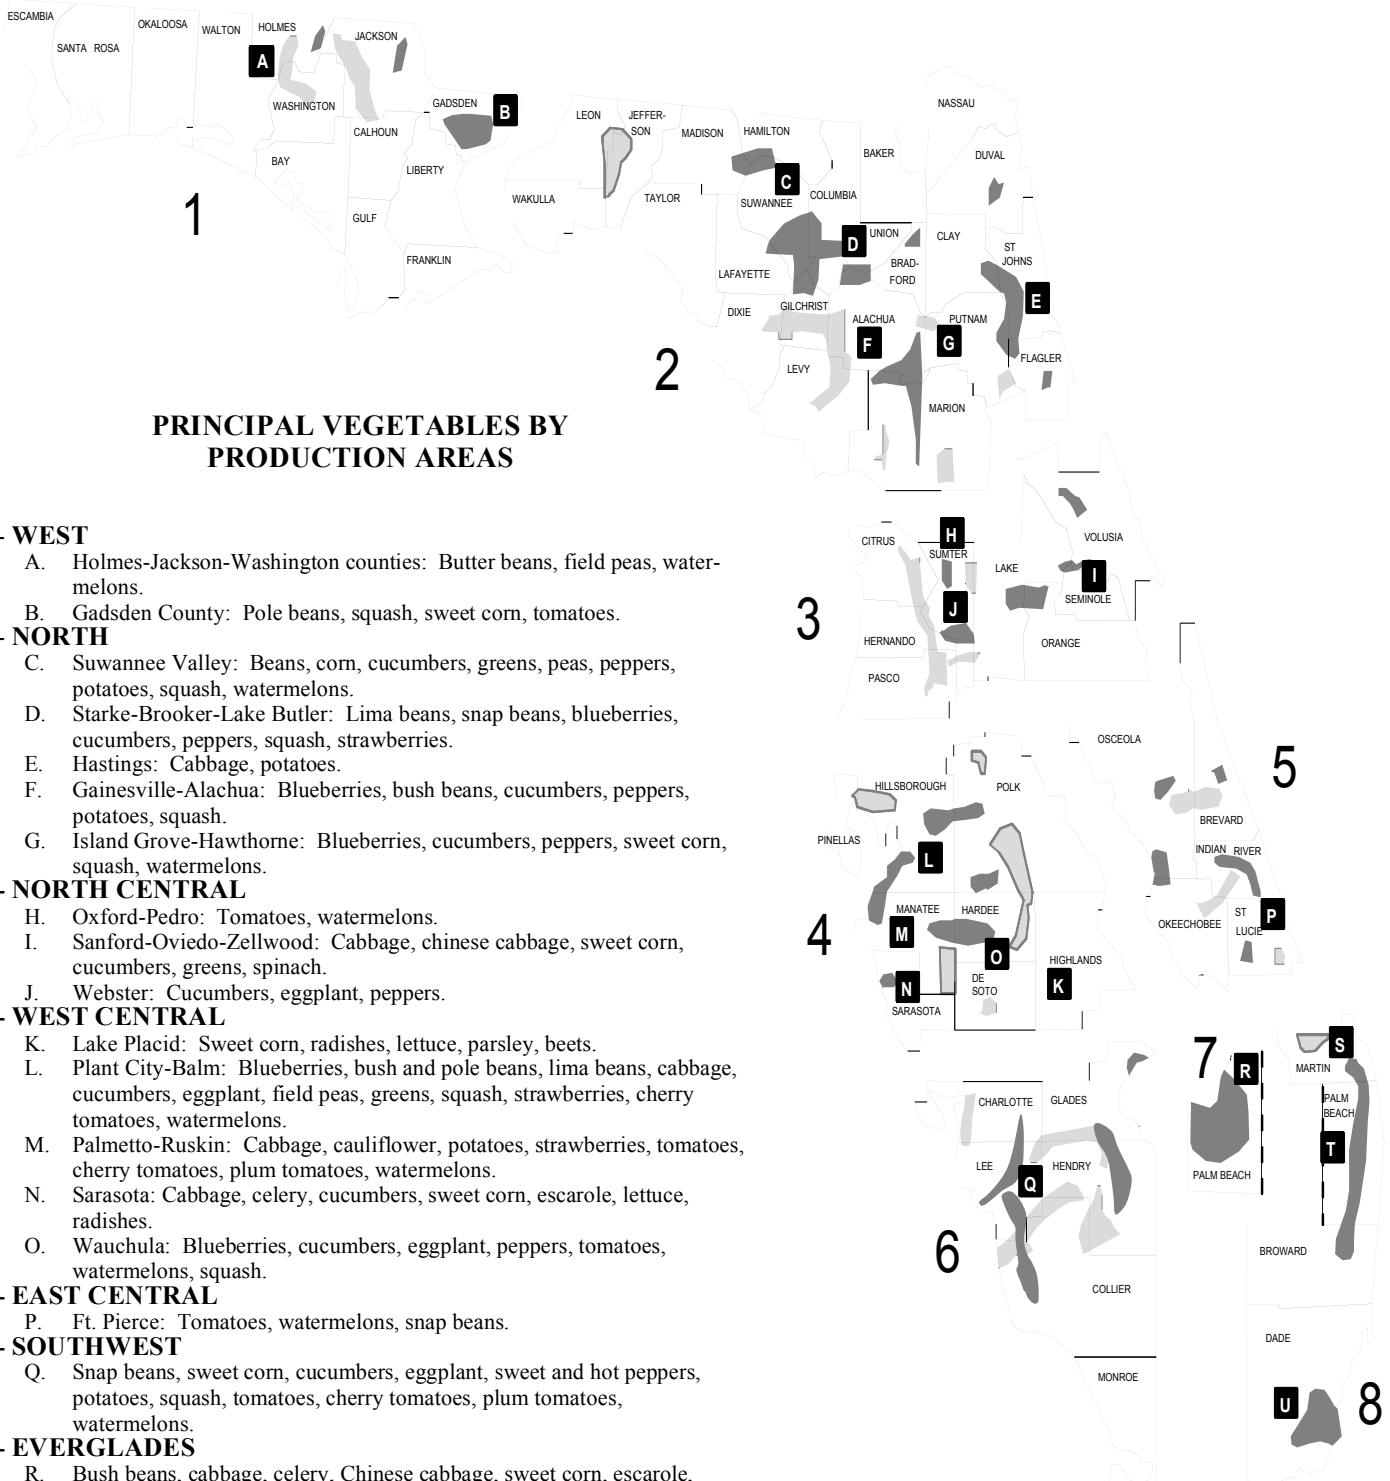

FLORIDA PRODUCE

^{1/} Usual date direct seeded or transplanted.

^{2/} Includes pole beans.

^{3/} A small acreage of summer squash is marketed locally during July and August.

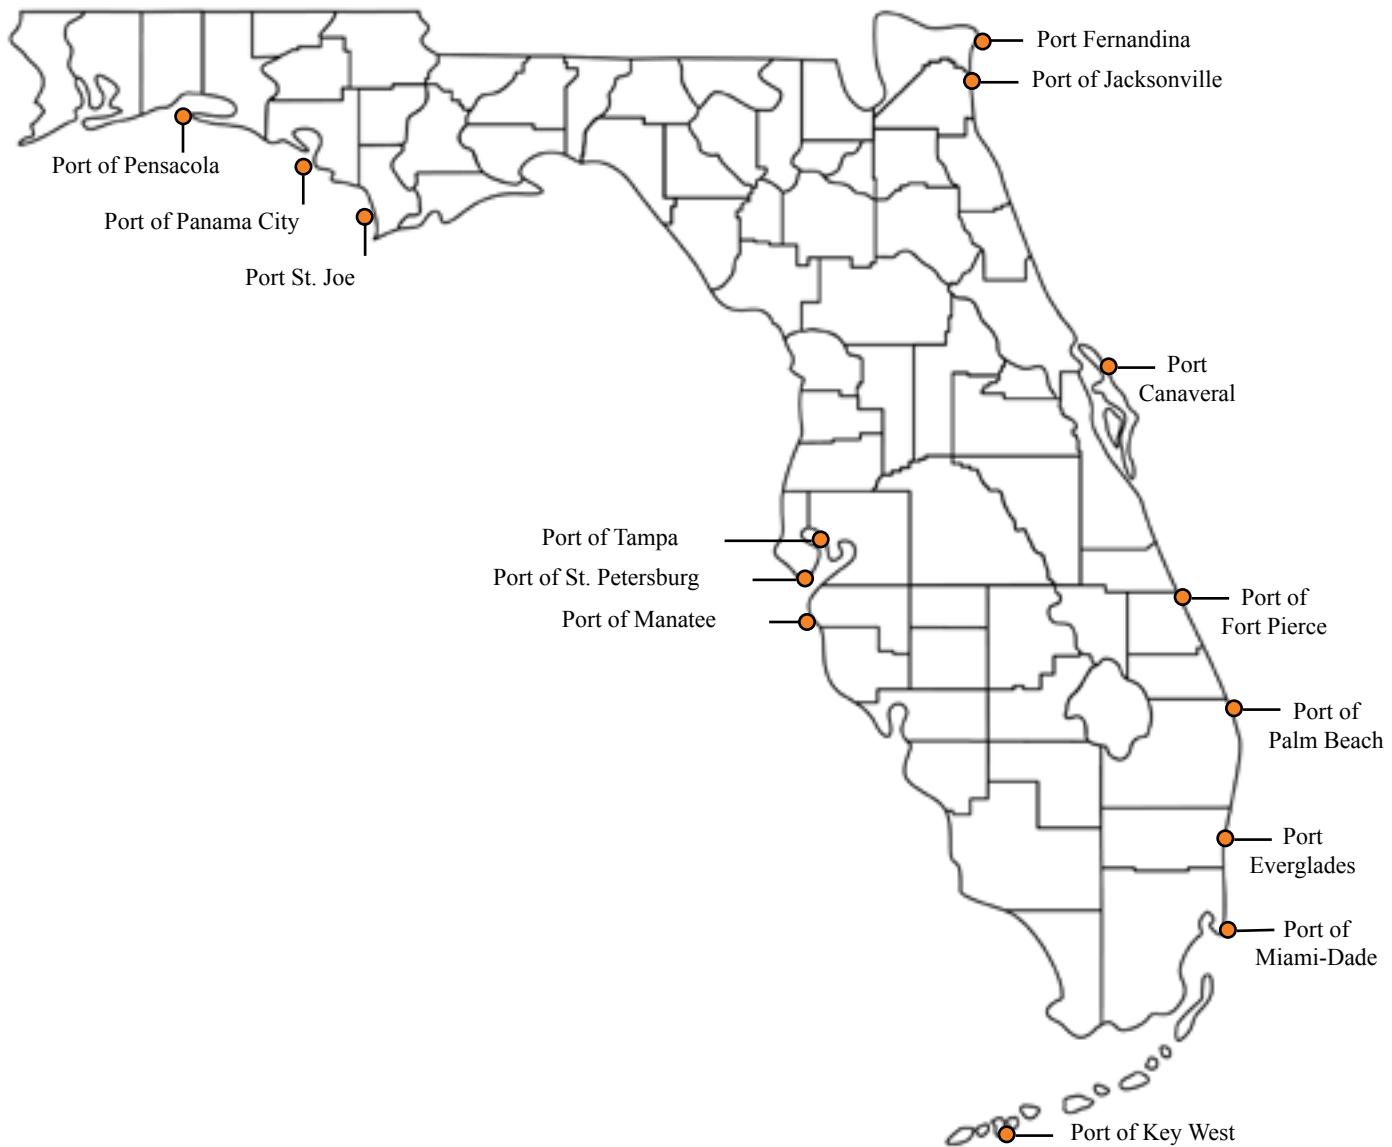

Exports

Leading importers of Florida agricultural commodities include Canada, Japan, the Netherlands and France

Florida's Seaports

Each of Florida's ports make a different contribution to the statewide seaport community.

Florida's Top Five Agricultural Exports, estimated, in 2008

Commodity Group	Export Value in \$	U.S. Ranking
1. Other**	814,200,000	2
2. Fruit	771,300,000	3
3. Vegetables	214,200,000	5
4. Feeds and Fodders	100,700,000	11
5. Live Animals/Meat***	56,500,000	24

** *Other:* sugar & tropical products, minor oilseeds, essential oils, beverages other than juice, nursery & greenhouse, wine and miscellaneous vegetable products

*** *Live Animals/Meat:* beef & dairy cattle, milk, hogs, sheep, goats, horses, rabbits, aquaculture, etc.

Source: ERS/USDA Data

Over 140 countries imported Florida agricultural commodities in 2008

The leading importers were:

1. Canada..... \$591,777,000
2. Japan \$112,784,000
3. Netherlands \$39,362,000
4. France..... \$36,566,000

Forestry

Timber and forest products remain
a major part of Florida's economy

Forestry Information

Urban sprawl, land use conversion and market changes have been identified by the U.S. Forest Service as the major challengers to the future of forestry in the South. Over the next 15 years, Florida is predicted to grow by 30 percent – 4.5 million people – bringing the state population to over 18 million. Land use will grow by 40 percent during this same time.

Despite an increase in forest fragmentation, timber remains a major part of Florida's economy. This is reflected in timber resource base and in the products harvested off Florida forests. In 2005, Florida timberlands totaled 15.6 million acres and supported more harvestable wood volume than anytime in the previous 18 years. Growing stock volume (trees > 5 inch DBH and of commercially valuable species) increased from 619 to 686 million green tons between 1987 and 2005. This is a result of increased net annual growth from 22.4 million to 26.2 million green tons, and relatively constant annual removals of about 20 million green tons.

Where does the wood come from?

- 70% from private non-industrial landowners
- 16% from forest industry
- 14% from public lands

In the last decade, more than two thirds (70 percent) of all harvests came from non-industrial private forests (NIPF), 16 percent came from forest industry lands and 14 percent came from public lands. Among the 13 southern states, Florida ranked 10th in total roundwood production, fifth in pulpwood, ninth in veneer logs and 11th in saw logs production in 2003 (Johnson et al. 2006). By 2005, Florida slipped to ninth in pulpwood production (Johnson and Steppleton 2007). Harvested wood volume varies from year to year depending on many factors including catastrophic events, such as hurricanes, which increase the harvested volume due to salvage operations.

Other Agricultural Resources

In 2008, Florida fisheries landings produced an estimated value of nearly \$1.7 million

AQUACULTURE HIGHLIGHTS

Florida aquaculture producers reported sales of \$75 million during 2005, down from 95.5 million in 2003 due to devastating hurricanes of 2004 and 2005. In 2005, sales increased for alligator farmers, but decreased for tropical fish, aquatic plants, hard clams, turtles, sportfish, and a variety of food fish including catfish, tilapia, and hybrid striped bass.

There were 359 operations that reported sales for 2005 versus 544 farms in 2003. In 2003, 544 operations used 6,450 water acres in production, versus 3,010 water acres used by 359 operations during 2005.

Florida Agriculture Groups

Important users of agricultural statistics are farm organizations, agribusiness and transportation firms, state and national policy makers, and foreign buyers of agricultural products. These vital Florida Agriculture Groups provide the majority of the data collected through a broad program of sample surveys throughout the year.

Aquaculture

Florida Aquatic Plant Growers Association

700 South Flamingo Road
Fort Lauderdale, Florida 33325

Florida Cooperative Extension Service & Extension IFAS/UF Office Locations

Extension service is a partnership between state, federal, and county governments to provide scientific knowledge and expertise to the public. The University of Florida (UF), together with Florida A&M University (FAMU), administers the Florida Cooperative Extension Service.

At the University of Florida, Extension service is located in the Institute of Food and Agricultural Sciences (IFAS), along with the College of Agricultural and Life Sciences (CALS) and the Florida Agricultural Research and Education Center, and is called UF/IFAS Extension.

UF/IFAS Extension encompasses thousands of Extension faculty members, scientists, educators, administrative staff, and volunteers, all working to provide solutions for your life.

www.solutionsforyourlife.com is the web site of University of Florida Extension Service. You can explore topics in lawn and garden care, family life and consumer choices, agriculture, community development, the environment, and youth development. Above all, our site is focused on getting you timely and relevant solutions for improving your life.

Florida Farm Bureau Federation Offices

The Sunshine State's largest general agricultural organization with about 138,000 member-families representing Farm Bureaus in 60 counties. Membership provides a multitude of benefits, and you don't have to be a farmer to be a member of Florida Farm Bureau.

Join the FAPC

The features and benefits of the Florida Agricultural Promotional Campaign

If you are trying to enter a new market or need a viable marketing plan, the Florida Agricultural Promotional Campaign (FAPC), also known as “Fresh from Florida,” can help. This comprehensive marketing campaign of the Florida Department of Agriculture and Consumer Services provides marketing assistance to producers, shippers, brokers, wholesalers, suppliers, small businesses, distributors, specialty product buyers, seafood vendors, nurseries and more. If you have an agricultural product, join our program today.

Membership Benefits:

- Graphic design assistance
- Opportunity to participate in the Consumer Packaging Logo Incentive Program
- Usage of the “Fresh from Florida” logos
- Receive a farm sign
- Receive exporting assistance from experience marketing representatives
- Receive the bi-annual “Fresh from Florida” magazine and new summer “Fresh from Florida” Update
- Grant and other agricultural information emailed in a timely manner

***Benefits of the program are subject to change depending upon legislative funding.**

Complete and mail the card below to get more information of the FAPC Program.

Yes, I'd like to join the Florida Agricultural Promotional Campaign (FAPC).

- Please send me a membership application for the FAPC.
 Please call me to discuss the FAPC.

AGRICULTURAL STATISTICS & OTHER INFORMATION

INTERNET

NASS national & State reports and data are available on the world wide web, the Internet.

NATIONAL HOMEPAGE

<http://www.nass.usda.gov>

The national homepage has links to all agency products and services such as publications, graphics, historic data, State information, statistical research, Census of Agriculture, a search engine and a Published Estimates Data Base to query and download State or county historic data. There are also links to our Customer Service unit, a Kids Page, and all other federal statistics outside the National Agricultural Statistics Service.

For a monthly summary of USDA estimates, forecasts and projections of commodities, prices, trade issues, and world crop developments, see:

http://www.nass.usda.gov/Publications_Ag_Newsletter/index.asp

FLORIDA HOMEPAGE

www.nass.usda.gov/fl/

The Florida web site offers much of the same information as the national homepage but in a format designed for Florida customers. The reports contain the same statistics but offer more details about agriculture in Florida. Links are also available to other sites such as the Florida Department of Agriculture, University of Florida and other NASS field offices.

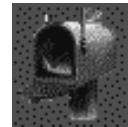

PRINTER REPORTS & COMPUTER FORMAT

All NASS reports are still printed on paper. Census reports are only available while supplies last; contact the Florida office for a copy. NASS also offers a wide variety of data on diskettes or CD-ROM with national, State, and county statistics. Most of these products are in Lotus 1-2-3 spreadsheet format or comma separated (CSV) files.

A listing of all paper reports and computer products can be found in the Products & Services catalog issued every December. To order a free Products & Services catalog or purchase paper reports, diskettes or CD-ROMs, call the order desk at:

1-800-999-6779

E-MAIL SUBSCRIPTIONS

Free e-mail subscriptions are available via automated mailing lists for National and State reports. You can subscribe to individual reports and they will be sent directly to your e-mail address soon after the official release time.

NATIONAL REPORTS VIA E-MAIL

National reports contain statistics from all states and are the most timely source of data. For more information, see:

<http://www.nass.usda.gov/Publications/index.asp>

or send e-mail to:

usda-reports@usda.mannlib.cornell.edu

and in the body of the message type the word: **list**

STATE REPORTS VIA E-MAIL

State reports are distributed after national reports but they usually contain more local information. To learn more about this service, see:

http://www.nass.usda.gov/Statistics_by_State/index.asp

or send e-mail to:

listserv@newsbox.usda.gov

and in the message text (not the subject), type two lines with one word on each line: **lists**
help

To subscribe to the Florida Weather & Crop News the message text (not the subject) would be:

subscribe usda-fl-crop-weather [your name]

AUTO-FAX

Selected NASS reports and information items are available from a free fax service called NASS-Fax. To receive the items, use a touch tone telephone connected to your FAX machine to call:

202-720-2000

Voice prompts will guide you to selected items of interest. The first time you access the system, request **Document number 0411** which will provide a listing of the information that is available in reports.

Florida Increases Ag Exports To U.K.

The United Kingdom is Europe's second-leading importer of Florida agricultural products, with more than \$41 million worth of goods purchased in 2007. A new report released by Florida Agriculture Commissioner Charles H. Bronson details Florida's ongoing efforts to expand agricultural exports and offers insight and information to Florida growers wishing to enter the important U.K. consumer market. [more](#)

Claims Against Ag Dealers Now Online

Florida's agricultural producers have a new tool to help them quickly find out which agricultural dealers have claims filed against them. A web site unveiled by Florida Agriculture Commissioner Charles H. Bronson enables the state's growers to view claims for non-payment that are currently filed against agricultural dealers, both licensed and unlicensed. [more](#)

Nominations Sought For Ag Hall Of Fame

Florida Agriculture and Consumer Services Commissioner Charles H. Bronson has announced that nominations are now being accepted for candidates to the Florida Agricultural Hall of Fame in 2009. The deadline for submitting nominations is September 1, 2008. "The Florida Agricultural Hall of Fame was created to honor Florida's agricultural pioneers and leaders," Bronson said. "I hope everyone will take a moment to consider who should be nominated this year for the highest honor bestowed by the agricultural community." [more](#)
