~ ~ ~ About the Cover ~ ~ ~

Featured on our front cover is "Pigs in a Basket", taken by Carrie Anne Smith from Denver, Indiana. This is Carrie's first year in 4-H and she is 9 years old. Carrie signed up to take photography in 4-H after watching her cousin enjoy it so much. She said, "I thought I would like it too. I really do enjoy taking pictures – it's a lot of fun behind the lens. I enjoy seeing the images I've taken".

The photograph on the back cover was taken by 11 year old Alexander Nunn from Laporte, Indiana. Alexander took the picture while looking around Laporte County for possible photo opportunities. He calls it "A Moo-ment in Time". This is his third year in 4-H and the photography project.

We extend a special thanks to the farmers, agri-businesses, extension officials and others who voluntarily provided basic data used to prepare the statistics presented in this publication and to the corps of enumerators who so faithfully collected much of our raw data.

We would also like to thank all of the 4-H photography members that submitted pictures for use in our publication. All of the photos were included on posters displayed at the 2009 Indiana State Fair.

In this 2009-2010 annual issue of the "Indiana Agricultural Statistics" publication you will find information about Indiana's entire agricultural industry. This is the 84th edition and is published by the cooperative efforts of Purdue University and USDA's National Agricultural Statistics Service.

This Federal/University cooperative effort has existed since 1925 and continues to enhance the opportunity for agricultural research programs for State specific statistical projects in support of agricultural researchers and decision makers. Some of those projects include Agronomic Survey of Indiana Corn and Soybean Growers, Plant Disease and Fungicide Use Survey, and Timber Price Survey. Results of these special research efforts are published by the individual research programs. Results from these special surveys are not a part of this publication but please feel free to contact us for reference to those researchers for additional information.

This publication satisfies the growing need for accurate, reliable and unbiased information and data. This data is used to provide facts to decision makers that determine the future of Indiana's agricultural industry. The goal for this publication remains unchanged. It is to provide the public with data to help them understand the current situation of Indiana's farming community and future opportunities. We strive to exceed this goal.

Indiana agriculture continues to be a growing segment of the State's economy, with Indiana ranked in the top ten nationally for farm receipts. Hoosier farmers should take pride in the fact that even with adverse weather conditions, rising production expenses and prices, Indiana agriculture continues to thrive. Indiana continues to rank near the top nationally in the production of corn, soybeans, popcorn, blueberries, peppermint, spearmint, processing tomatoes, fresh market melons, and vegetables for processing. Indiana livestock producers put our state's rank at the top for hogs, chickens, eggs, and turkeys.

The information in this annual summary is collected from farmers using surveys throughout the year. The voluntary response and cooperation of Indiana farmers, agricultural business firms, USDA Farm Service Agency County Staff, Purdue University County Extension Staff, NASDA Enumerators, and others across the state makes this Publication possible. The Indiana Field Office of USDA's National Agricultural Statistics Service pledges confidentiality of all individual reports and business data. We take every action necessary to ensure this pledge is upheld.

We are again pleased to feature the photography talents of 24 individual 4-H members within Indiana's 2009-2010 Agricultural Statistics Annual Summary. These photographs, exhibited at the 2009 Indiana State Fair, provide a glimpse of Indiana's agriculture from future farmers' perspective. We are grateful to all of the 4-H members who submitted their photos for publication.

Thank you for the opportunity to serve the agricultural community, with your help, in providing timely, accurate, and unbiased data. Please let us know your comments and suggestions.

Sincerely,

Greg Preston

FARM INCOME

CASH RECEIPTS

Indiana farmers received \$8.76 billion in cash receipts from farm marketings in 2009, 8 percent below 2008. Cash receipts from crops were down 4 percent, and receipts for livestock were 17 percent below the previous year. Marketings of crops at \$6.39 billion, accounted for 73.0 percent of the total cash receipts in 2009 while livestock receipts, at \$2.37 billion, accounted for the remaining 27.0 percent. In the previous year crop receipts accounted for 70.0 percent and livestock 30.0 percent of total cash receipts.

Corn was the leading source of income for Indiana farmers in 2009 and amounted to \$3.29 billion. Soybeans were second at \$2.52 billion and meat animals were third with \$1.06 billion. Poultry and Eggs remained as the fourth leading contributor with \$829 million and Dairy follows with \$450 million. These five commodity groups accounted for 93 percent of the 2009 cash receipts.

^{1/} Value of Agricultural sector production is the gross value of the commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

^{2/} A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales.

^{1/} Value of Agricultural sector production is the gross value of the commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

The above estimates of Growing Degree Days (GDD) Normals are derived from normal temperatures (1971-2000) at mid-month and the corresponding GDD. For example, a weekly average temperature of 60°F resulted in 84 GDD. The basic formula is: $1/2 (\max T - 50) + 1/2 (\min T - 50) = \text{GDD for one day}$. The maximum temperature is not allowed to exceed 86 degrees F. Negative units are not accumulated.

CROP HIGHLIGHTS

ACREAGE: Indiana's five major field crops totaled 12.1 million acres for harvest during 2009, down one percent from the 2008 harvested acreage. Corn acreage for harvest was unchanged from a year ago, while soybean acreage for harvest was up slightly from 2009. Winter wheat harvested acreage was down 20 percent from a year ago, but all hay harvested acreage was up 5 percent from the 2008 level. Oat acreage for harvest increased 40 percent from 2008. Other crops showing harvested acreage changes were tomatoes for processing, up 18 percent while tomatoes for fresh market decreased 11 percent. Sweet corn acreage for harvest increased 13 percent and watermelon harvested acreage increased 3 percent from 2008. In addition, snap beans for processing decreased 2 percent, while cucumbers for processing decreased 12 percent from 2008. Furthermore, cantaloupes for fresh market decreased 4 percent.

YIELDS: The 2009 growing season got off to a slow start due to cold, wet soil conditions. On the 6th of April, many areas of the state encountered snow with some northern areas receiving up to 3 inches. During late April and early May persistent rain showers kept farmers out of the fields, and by May 31st, only 78 percent of the intended corn acreage and 50 percent of the soybean acreage had been planted. Some farmers were still trying to plant corn during the second week of June, but many had either switched to soybeans or had taken preventive plantings. It was difficult for farmers to find enough rain-free days in a row to cut and bail hay without it getting wet. Winter wheat harvest progressed at a mostly normal pace across the state with good yields obtained in most areas. Below normal temperatures during July slowed crop development causing concern of potential damage from an early frost. Field crops in some northern counties were under stress from dry conditions in early and mid August while a few central and southern counties experienced flooding. Sudden death syndrome (SDS) and white mold were problems in many soybean fields. Corn and soybeans were very slow to mature, and by mid October, corn harvest was over 20 days behind the average pace. At this same

time, the soybean harvest briefly fell to a new record low pace, but moved out of this territory by the end of the month. Moisture content in harvested corn and soybeans remained higher than desired resulting in a large portion of the crops needing to be dried to prevent spoilage. Corn harvest lagged behind the normal pace all fall and by November 22nd it was the latest since 1992. Finally by December 6th, 91 percent of the corn acreage had been harvested and the soybean harvest was virtually complete. Mold was a severe problem in harvested corn resulting in considerable price dockage at the elevator with some corn being rejected entirely. The average yield for corn in 2009 was 171 bushels per acre, 11 bushels above the 2008 yield setting a new record high. The average yield for soybeans was 49 bushels per acre, 4 bushels above the 2008 yield. The average yield for winter wheat at 67 bushels per acre was 2 bushels below the previous year's yield of 69 bushels per acre. The average oat yield at 69 bushels per acre was down 6 bushels from last year's yield of 75 bushels per acre. All hay yield at 2.77 tons per acre was down from the 2008 yield of 3.16 tons per acre. Popcorn averaged 4,300 pounds per acre, down 200 pounds from the 4,500 pounds per acre produced a year earlier.

PRODUCTION: Corn produced during 2009 totaled 933.7 million bushels, 7 percent above the 2008 level of 873.6 million bushels. Soybean production was 266.6 million bushels, 9 percent above the 244.4 million bushels produced a year earlier. Winter wheat production decreased 22 percent from a year earlier, to 30.2 million bushels. Popcorn production totaled 258.0 million pounds, 6 percent below the 2008 level. Oat production of 483 thousand bushels was 29 percent above the 375 thousand bushels produced in 2008. All hay production, at 1.7 million tons, decreased 8 percent. Peppermint production increased 47 percent while spearmint production increased 6 percent from 2008. Apple production increased 30 percent to 30.0 million pounds. Blueberry production totaled 3.7 million pounds, a 3 percent decrease from the previous year.

BIOTECHNOLOGY VARIETIES

The National Agricultural Statistics Service conducts the June Agricultural Survey in all States each year. Randomly selected farmers across Indiana are asked if they planted corn or soybean seeds that, through biotechnology, are resistant to herbicides, insects, or both. Conventionally bred herbicide resistant varieties were excluded. Insect resistant varieties include only those containing bacillus thuringiensis (Bt). Stacked gene varieties include those containing biotech traits for both herbicide and insect resistance.

COUNTY HIGHLIGHTS

COUNTY HIGHLIGHTS

The following pages of county statistics represent the results of a survey of over 11,000 farm operators following the 2009 harvest season. In addition to these data are selected items of interest from the U.S. Population Census, 2007 Census of Agriculture, and 2008 Cash Receipts information from the Bureau of Economics Analysis. The County Highlights section summarizes the importance of agriculture to each and every Indiana county while comparing the magnitude of importance across counties.

Planted acreage for hay is represented by three dashes because this category is not estimated, planted acreage and yield for popcorn are represented by three dashes because these categories are not surveyed; in all other places the three dashes represent zero for that county. An asterisk signifies that the county has data for this item, but it cannot be disclosed for confidentiality purposes. The 2007 Chicken data from Census includes only layers twenty weeks old and older.

Below is a list of comparable items at the state level.
