## **Indiana Crop Weather**

November 12, 2024

## **Harvest Season Wound Down**

Gentle rain helped to slowly moisten the soil as harvest neared conclusion across the State, according to Nathanial Warenski, State Statistician, USDA NASS, Indiana Field Office. Topsoil moisture levels increased from the previous week, with 40 percent rated adequate or surplus.

The average temperature for the week was 56.5 degrees Fahrenheit, 11.5 degrees above normal for the State. The statewide average precipitation was 1.84 inches, 1.02 inches above normal. There were 5.1 days suitable for fieldwork for the week ending November 10.

Despite rainfall during the previous week, the soil remained drier than usual due to exceptionally warm fall weather and persistent lack of precipitation. Many burn bans have been lifted. Corn and soybean harvest progress ended the week at 94 and 96 percent, respectively, which was significantly ahead of the five-year averages. Winter wheat condition was stable with 62 percent of the crop rated in good to excellent condition. However, some planted winter wheat was reported to be struggling to emerge due to a lack of moisture. Other activities included fall tillage, planting cover crops, hauling grain, and applying lime and manure.

Soil Moisture: Week Ending 11/10/24

Item	Very short	Short	Adequate	Surplus		
	(percent)	(percent)	(percent)	(percent)		
Topsoil moisture	21	39	39	1		
Subsoil moisture	28	41	31	0
