Indiana Crop Weather

November 18, 2024

Soybean Harvest Concluded Despite Rain

Harvest wrapped up in many areas last week amid warm, rainy weather, according to Nathanial Warenski, State Statistician, USDA NASS, Indiana Field Office. Topsoil moisture levels increased from the previous week, with 54 percent rated adequate or surplus.

The average temperature for the week was 47.6 degrees Fahrenheit, 6.1 degrees above normal for the State. The statewide average precipitation was 1.07 inches, 0.32 inches above normal. There were 4.3 days suitable for fieldwork for the week ending November 17.

Soybean harvest across the State concluded, finishing considerably ahead of the five-year average pace. Corn harvest progress also neared its finish, ending the week at 97 percent complete. Steady rainfall and warmer-than-average temperatures aided the winter wheat crop, propelling emergence progress back up to the five-year average pace. Winter wheat condition improved slightly with 64 percent of the crop rated in good to excellent condition. Other activities included fall tillage, weed control, fertilizer and manure applications, and winter preparations.

Soil Moisture: Week Ending 11/17/24
