Cooperating with Louisiana Department of Agriculture and Forestry

This report contains the results from the **Crop Progress and Condition** weekly survey. The survey is completed by parish extension agents' visual observations and contact with producers in their parish. These data are also posted on our web site at <https://www.nass.usda.gov/la> and in a more detailed report at <https://www.nass.usda.gov>. Thanks to all of the parish extension agents who responded to this survey.

Week Ending: November 19, 2023

Released: November 20, 2023

According to the National Agricultural Statistics Service in Louisiana, there were 5.5 days suitable for fieldwork for the **week ending Sunday, November 19, 2023**. Topsoil moisture supplies were 29 percent very short, 52 percent short, 19 percent adequate, and 0 percent surplus. Subsoil moisture supplies were 36 percent very short, 50 percent short, 14 percent adequate, and 0 percent surplus.

Crop Progress for Week Ending November 19, 2023

Crop	This week	Last week	Last year	5-year average
	(percent)	(percent)	(percent)	(percent)

USDA AGRICULTURE COUNTS

Louisiana Subsoil Moisture Map for the week of November 6 – November 12, 2023

The Soil Moisture Active Passive (SMAP) provides measurements of soil moisture in the root zone as a weekly average, represented by pixels. Each pixel represents 9 by 9 kilometer plot or about 20,000 acres. The SMAP data measures soil moisture in cubic centimeters of water/cubic centimeters of soil. The scale represents the percent of water in a given volume of soil. More information and additional mapping is available at <https://nassgeo.csiss.gmu.edu/CropCASMA/>.
