This report contains the results from the **Crop Progress and Condition** weekly survey. The survey is completed by parish extension agents' visual observations and contact with producers in their parish. These data are also posted on our web site at *https://www.nass.usda.gov/la* and in a more detailed report at *https://www.nass.usda.gov*. Thanks to all of the parish extension agents who responded to this survey.

Week Ending: March 10, 2024 **Released: March 11, 2024**

According to the National Agricultural Statistics Service in Louisiana, there were 2.9 days suitable for fieldwork for the **week ending Sunday, March 10, 2024**. Topsoil moisture supplies were 0 percent very short, 2 percent short, 75 percent adequate, and 23 percent surplus. Subsoil moisture supplies were 0 percent very short, 11 percent short, 80 percent adequate, and 9 percent surplus.

Crop Progress for Week Ending March 10, 2024

Crop	This week	Last week	Last year	5-year average
	(percent)	(percent)	(percent)	(percent)
Corn planted	17	(NA)	62	16
Rice planted	9	(NA)	10	5
Winter wheat headed	2	(NA)	1	1

(NA) Not available.

Crop Condition for Week Ending March 10, 2024

Item	Very poor	Poor	Fair	Good	Excellent
	(percent)	(percent)	(percent)	(percent)	(percent)
Hay, all	0	4	60	36	0
Livestock	2	7	32	53	6

Louisiana Subsoil Moisture Map for the week of February 26 – March 3, 2024

The Soil Moisture Active Passive (SMAP) provides measurements of soil moisture in the root zone as a weekly average, represented by pixels. Each pixel represents 9 by 9 kilometer plot or about 20,000 acres. The SMAP data measures soil moisture in cubic centimeters of water/cubic centimeters of soil. The scale represents the percent of water in a given volume of soil. More information and additional mapping is available at https://nassgeo.csiss.gmu.edu/CropCASMA/.
