## Field Crops

Measurable precipitation and warm temperatures aided wheat emergence and growth as corn and soybean growers were finishing up harvest last week, according to Marlo D. Johnson, Director, USDA NASS, Great Lakes Regional Office. There were 5.0 days suitable for fieldwork in Michigan during the week ending November 10, 2024. **Corn** harvested for grain reached 91 percent last week, 31 points ahead of the 5-year average. Ninety-two percent of **winter wheat** had emerged, an increase of 14 points from the previous week. **Sugarbeet** harvest continued as sugar plants worked at capacity. Permanent piling of the crop was still intermittent. Other activities last week included soil testing, planting cover crops, hauling grain, fall tillage, tending to livestock, and farm planning for next year.
