Warmer Than Usual in Idaho

There were 6.6 days suitable for fieldwork in Idaho, up from 6.4 the previous week. During the week, warmer than normal temperatures were accompanied by precipitation in some areas. Jerome and Twin Falls Counties reported that the second cutting of alfalfa made progress due to hot weather. Corn was growing quickly, and most had recovered from earlier frost damage. Winter cereals were ripening, and most other crops looked good. Low elevation ranges dried out, while high elevation ranges appeared sufficient. Elmore and Owyhee Counties experienced the presence of Mormon Crickets in higher than usual elevations.

Oregon Dry and Cool with Sporadic Extreme Winds and Storms

There were 6.7 days suitable for fieldwork in Oregon, up from 6.6 days the previous week. Columbia, Multnomah, and Washington Counties reported cool, dry conditions with favorable progress for agronomic crops, including berries. Some disease issues were observed in late strawberries. Polk County reported a continued cool weather trend. Clatsop and Tillamook Counties reported cool conditions coupled with overnight rainfall, which ceased during the day and allowed for continued field activities. Hay was baled, and fields were treated with manure applications. Weather in Clackamas County was ideal for most crops, with irrigation utilized where needed. Hood River, Sherman, and Wasco Counties reported a continued positive outlook for crop progress. Windy conditions persisted, along with cooler temperatures. At times, the wind was severe, and spraying fields remained cumbersome. Umatilla County reported an outstanding outlook for winter and spring canola crops. Malheur County reported a significant thunderstorm that caused extensive damage and multiple fires, estimated to have burned several thousand acres of rangeland. Alfalfa hay continued to progress, and the second cutting was well underway. Dry peas and winter wheat neared harvest.

Windy Weather in Washington

There were 6.7 days suitable for fieldwork in Washington, up from 6.3 days the previous week. Western Washington saw cooler temperatures and some rain during the week. Strawberry harvest was ending as the raspberry harvest was gearing up. Central Washington had a lot of wind last week. The ground was drying out, with minimal subsoil moisture. In Yakima County, numerous brushfires were being fought throughout the non-irrigated areas of the County. Cherry harvest continued, while fruit thinning activities were noted in peaches and apples. Most hop bines were nearing the top of trellises. Mint fields and timothy hay were harvested over the past week. East central Washington had warm and dry conditions, which helped crops throughout the week. Moisture was adequate, but the spring crops could use more. In southeast Washington, it was mostly dry.

Soil Moisture Condition — Idaho, Oregon, and Washington: Week Ending 06/30/24

Item and State	Very short (percent)	Short (percent)	Adequate (percent)	Surplus (percent)
Topsoil moisture				
Idaho.....	2	28	68	2
Oregon.....	2	40	56	2
Washington.....	6	25	69	-

Access to NASS Reports

For your convenience, you may access NASS reports and products the following ways:

- All reports are available electronically, at no cost, on the NASS web site <http://www.nass.usda.gov>
- Both national and state specific reports are available via a free e-mail subscription. To set-up this free subscription, visit <http://www.nass.usda.gov>. Hover over the "Publications" drop down. Under "Receive reports by Email" section in the lower right corner, select the report(s) you would like to receive.

For more information on NASS surveys and reports, call the NASS Agricultural Statistics Hotline at (800) 727-9540, 7:30 a.m. to 4:00 p.m. ET, or e-mail: nass@usda.gov
