CROP PROGRESS AND CONDITION WEEK ENDING JUNE 19, 2016

AGRICULTURAL SUMMARY: Dry, hot conditions continue to persist across most of the state, but topsoil and subsoil moisture levels continued to be reported above both last year and the 5-year average, according to the Mountain Regional Field Office of the National Agricultural Statistics Service, USDA. Days suitable for field work increased slightly to 6.8 days from 6.7 days the previous week. The corn crop is almost fully emerged at 95 percent, comparable to both the previous year and 5-year average of 94 percent. Reports out of Weber County indicate corn mites have shown up in the 8 inch stalks, with concerns that continued hot, dry conditions could worsen the issue. Significant progress has been made for the first cutting of hay, with alfalfa hay reported at 83 percent complete and other hay at 73 percent complete, both significantly above their previous year and 5-year averages. Spring and winter wheat headed has seen substantial progress at 60 percent and 96 percent respectively and harvesting should begin soon. Harvesting of sweet cherries has started with 8 percent complete, behind both the previous year and 5-year average. Sheep and lambs moved to pasture is complete and cattle are nearing completion at 93 percent, with 72 percent of the pasture and rangeland in good to excellent condition. Irrigation and water supplies are at 79 percent good to excellent condition, compared to 45 percent good to excellent last year. Stock water supplies were reported as 9 percent short, 90 percent adequate, and 1 percent surplus.
