

# CALIFORNIA AGRICULTURE OVERVIEW

## CALIFORNIA'S GROSS CASH INCOME JUMPS 6% TO A NEW RECORD HIGH

Agricultural production and gross cash income in 1996 rose to a record level of \$24.8 billion, 6% above last year. Cash receipts from farm marketings totaled \$23.3 billion, up 3% from 1995; other farm related income was \$1.5 billion. Of the total gross income, livestock and poultry comprised 25%; fruits and nuts, 26%; vegetables and melons, 21%; field crops, 13%; nursery, greenhouse products, and Christmas trees, 9%. Fruit and nut cash receipts increased 7% to \$6.37 billion, while livestock and poultry increased 12% to \$6.21 billion. Vegetable crops declined 7% to \$5.30 billion, but field crops increased 1% to \$3.19 billion, and nursery and greenhouse products increased 4% to \$2.22 billion. Notable increases in marketings were as follows: corn for grain, +44%; cottonseed, +39%; rice, +21%; wheat, +70%; apricots, +53%; Freestone peaches, +45%; pears, +44%; grapes, +16%; fresh tomatoes, +27%; eggs, +27%; milk and cream, +21%; almonds, +14%; olives, +105%. Significant decreases in marketings occurred in sugar beets, -24%; pistachios, -24%; lemons, -21%; tangerines, -55%; asparagus, -29%; celery, -37%; and lettuce, -25%.

## PRECIPITATION ABOVE NORMAL IN NORTH, BELOW IN SOUTHERN CALIFORNIA. TEMPERATURES ABOVE FOR SEASON

The Golden State experienced an unusual year (July 1995-June 1996) with precipitation above normal for the northern half of the State, but below in the southern part. Heavy rainfall during the winter months hampered pollination. Cold temperatures in late February damaged additional almond and stone fruit blossoms. Before late February, temperatures were well above normal and the lack of chilling hours affected tree fruit production. Temperatures during the summer months were generally well above normal and crop development was ahead of normal. The high temperatures caused sunburn damage to walnuts and boll shedding to cotton. With warm dry conditions throughout the summer and fall, harvest of most crops progressed rapidly and was completed ahead of normal. Even with the adverse weather, most fruit crops showed increases in production from the previous year's very low production. Olive production jumped 114% from 1995 to a record high. With the exception of almonds, all nut crops had lower production in 1996. Pecan production was down 55%; pistachios, down 29%; walnuts down 11%. Most stone fruit showed large increases with apricots, +41%; nectarines, +38%; Clingstone and Freestone peaches, both +26%; plums, +79%. Most vegetable crops experienced increases in production from the flood damaged crops of 1995. The following vegetable crops reached a record high production: carrots, +23%; fresh cucumbers, +21%; garlic, +17%; cantaloupes, +9%; honeydew melons, +40%; watermelons, +18%; bell peppers, +10%. Several field crops had large increases in 1996 production, most of which was due to more harvested acreage. Field crops showing significant changes were as follows: winter wheat, +46%; Durum wheat, +103%; corn for grain, +47%; Pima cotton, +67%; sugar beets, -25%. Red meat production dropped 3%, which included beef, -3%; lambs and mutton, -6%; pork, -14%. Poultry production decreased 2%. California continues to lead the Nation in milk production, which was up 2% from a year ago. Milk is also the Golden State's leading commodity.

## CALIFORNIA FIRSTS

Some 250 crops are recognized in California, including seeds, flowers and ornamentals.

This report contains information about 65 major crops grown on a large commercial scale in California:

13 Field Crops  
25 Fruits and Nuts  
25 Vegetables and Melons  
Nursery Products and Cut Flowers

In addition, data are shown for 10 livestock, poultry, and other products.

California leads the Nation in the crops shown in the table below. A large number are specialty crops in which the Golden State accounts for most of the U.S. production.

## CALIFORNIA'S LEADING FARM PRODUCTS

California's "Top Twenty" crop and livestock commodities account for 75% of the State's gross farm income.

### California's Diversity

California agriculture is considered one of the most diversified in the world, with no one crop dominating the State's farm economy.

This is illustrated by the fact that only one product exceeds 10%, and the five leading commodities account for about two-fifths, of the State's total gross farm income.

California continues to lead the nation with many commodities, primarily fruit and nut crops and vegetables. Fruit, nut and vegetable crops produced in California account for over half of the nation's production.

### CALIFORNIA 1996 FARM FACTS

About 11.5% of the national gross cash receipts for farming are produced in California on 82,000 farms.

This constitutes 4.4% of the Nation's total farms (based on the Census of Agriculture definition of farms as places with annual sales of agricultural products of \$1,000 or more).

#### CROP AND LIVESTOCK COMMODITIES IN WHICH CALIFORNIA LEADS THE NATION

Alfalfa Hay  
Alfalfa Seed  
Almonds  
Apricots  
Artichokes  
Avocados  
Bedding Plants  
Bell Peppers  
Bermuda Grass Seed  
Blackeye Beans  
Broccoli  
Brussels Sprouts  
Bulbs  
Cantaloupes  
Carrots  
Casaba Melons  
Cauliflower  
Celery  
Chicory  
Chinchillas  
Chinese Cabbage  
Chinese Peas  
Crenshaw Melons  
Currants  
Cut Flowers  
Dates  
Dry Baby Lima Beans  
Dry Large Lima Beans  
Eggs  
Figs  
Garbanzo Beans  
Garlic  
Goat's Milk  
Green Lima Beans  
Green Onions  
Greenhouse Vegetables  
Herbs  
Honey  
Honeydew Melons  
Indoor Plants  
Dry Kidney Beans

Kiwifruit  
Ladino Clover Seed  
Lemons  
Romaine Lettuce  
Leaf Lettuce  
Head Lettuce  
Milk  
Nectarines  
Olives  
Onions  
Oriental Vegetables  
Parsley  
Peaches  
Pears, Bartlett  
Persian Melons  
Persimmons  
Pigeons & Squabs  
Pistachios  
Plums  
Pomegranates  
Prunes  
Rabbits  
Raisins  
Safflower  
Sod  
Spinach  
Strawberries  
Sudan Grass  
Sweet Rice  
Table Grapes  
Processing Tomatoes  
Vegetable & Flower Seed  
Walnuts  
Wild Rice  
Wine Grapes

**CALIFORNIA FARM INCOME INDICATORS, 1992-96**

Real estate and nonreal estate interest	991,782	1,004,685	1,092,382	1,185,357	1,248,840
Net farm income	5,305,545	5,822,096	5,824,816	4,644,537	5,662,985

1/ A positive value of inventory change represents current-year production not sold by December 1. A negative value is an offset to production from prior years included in current-year sales.

2/ Final sector output is the gross value of the commodities and services produced with a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-of-production. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

**CASH RECEIPTS DEFINED**

Cash receipt data as prepared by the Economic Research Service (ERS) reflect income derived from the sale of agricultural commodities during a calendar year for only that portion of the commodity that is sold. Whereas, value of production data for crops and livestock products as prepared by the National Agricultural Statistics Service (NASS) reflect the total value of the commodity produced based on a marketing year average price. For certain commodities such as some fruits and vegetables which are normally sold in the same calendar year in which they were produced, cash receipt data and value of production data will be in close agreement. However, for most field crops, the marketing year will span portions of two calendar years, making the two data series non comparable. Data users should be aware of the differences between the ERS and NASS data series in their use of the data.

a/ Old definition of farm: Places of 10 or more acres that had annual sales of agricultural products of \$50 or more and places of less than 10 acres that had annual sales of \$250 or more.

b/ New definition of farm: Places with annual sales of agricultural products of \$1,000 or more.

# CALIFORNIA FIELD CROPS

## SUMMARY OF FIELD CROPS

California's 1996 field crop production was worth \$3.63 billion at the farm-gate level. This value was 5% above the previous year.

Wheat, corn for grain, American Pima cotton, and cottonseed recorded significantly higher farm returns. Winter wheat harvested acreage, yields, and prices were up considerably from the flood-plagued 1995 crop. Durum wheat value of production was up 107% due primarily to a doubling of harvested acreage, as yields and prices remained fairly constant. Total value of corn for grain was up 30% due to a 47% increase in harvested acreage, which offset an 11% drop in average price. American Pima cotton returns increased 38% as harvested acreage jumped 43% from the previous year and yields were up 17% from the heat-stricken 1995 crop. These factors offset a 22 cent per pound decline in the average price.

Rice, dry edible beans, sugar beets, and sweet potatoes showed significantly lower farm returns. Rice acreage was up 8%, but yields were down slightly and prices were down 14%, which brought the total value down 8%. Dry bean acreage and yields were lower, but were partially offset by a 7% increase in price. Sugar beet production and value decreased considerably with harvested acreage down 28% from the previous year. Sweet potato returns dropped 26%, as average prices fell 35% from 1995.

The average value per harvested acre in 1996 increased to \$692 from the \$674 per acre value in 1995. Production of the major field crops totaled 25.5 million tons, down 2% from the 26.1 million tons produced in 1995.

Upland cotton was again the State's highest valued field crop with a total value of \$887 million. Nationally, California ranked second in Upland cotton production with 2.39 million bales produced, at an average price of 77.3 cents per pound.

All hay was California's second leading field crop, with a total value of \$813 million. At the U.S. level, the State ranked second in the production of all hay, with a total of 8.01 million tons.

a/ Production is on a clean basis

b/ Estimate discontinued.

c/ Excludes beans grown for garden seed.

d/ Not estimated.

e/ Cotton: 480 lbs. net-weight per bale.

f/ Estimated marketings of alfalfa and other hay used as weights to calculate all hay price for 1989-96.

g/ Not available at publication.

h/ Excludes sweet and wild rice.

i/ Includes some acreage carried over and harvested the following spring.

1/ The total covered growing area of 134,772,000 square feet consisted of the following: 22,273,000 square feet of shade and temporary cover; 14,114,000 square feet of glass; 45,754,000 square feet of fiberglass and other rigid greenhouses; and 52,631,000 square feet of film plastic (single/multi) greenhouses. In addition, plants were produced on 10,200 acres of open ground.

2/ For potted plants, price represents a weighted average for plants sold in pots less than 5 inches and in pots 5 inches or more.

3/ Total includes Gladioli, which are not published to avoid disclosure of individual operations.

4/ Total includes New Guinea Impatiens, which are not published to avoid disclosure of individual operations.

5/ Based on equivalent wholesale value of all sales for all crops, except potted foliage plants which are based on net value of sales.

# FRUIT AND NUT CROPS

## SUMMARY OF FRUIT AND NUT CROPS

California produced 13.5 million tons of fruit and nut crops in 1996, 4% more than in 1995. The Golden State grew 41% of U.S. fruit and nut production in 1996, up from 39% the previous year. The total value of fruit and nut production was \$6.43 billion in 1996, up 9% from 1995. This was 57% of the U.S. total value. Record values of production were set for all grapes, nectarines, olives, all peaches, all pears, and almonds. For the first time, almonds and wine-type grapes passed the billion-dollar mark in value of production. California accounts for nearly all of the U.S. production of dates, figs, kiwifruit, nectarines, olives, almonds, pistachios, and English walnuts.

California dominates U.S. production of apricots, avocados, grapes, lemons, plums, prunes, and strawberries. Several crops had major changes in production from 1995 to 1996. They include the following changes: apricots, up 41%; nectarines, up 38%; Cling and Freestone peaches, both up 26%; plums, up 79%; almonds, up 38%; olives, up 114%; Valencia oranges, up 38%; pecans, down 55%; and pistachios, down 29%.

Precipitation during the winter months was near normal. Rainy weather during the critical pollination period hampered bee pollination, and cold temperatures in late February damaged some blossoms in almonds and stone fruits. Before late February, temperatures were well above normal and the lack of chilling hours affected the production of some crops. Temperatures during the summer months were generally well above normal and crop development was ahead of normal. The high temperatures caused sunburn damage to walnuts and hastened maturity of most crops. Harvest progressed rapidly and was generally completed ahead of normal.

## NOTES FOR USERS

**Total production** is the quantity actually harvested plus quantities that would have been acceptable for fresh market or processing but were not harvested. It also includes fruit harvested but not sold due to marketing conditions. **Utilized production** is the amount sold plus the quantities used at home or held in storage. **Crop year production** for citrus and avocados are from the bloom of the first year shown. For example, 1996-97 would represent the 1997 production from the 1996 bloom.

**Utilization** refers to first, but not necessarily final, utilization. For example, frozen fruit used for preserves is included as frozen. **Canned** includes all canned products -- jam, jelly, baby food, nectar, juice, puree, and all fruit packs combined.

The price quoted is at the packinghouse door, which includes the transportation costs. Drying costs are excluded from prices on all fruit crops except grapes. **Crop value** estimates cover the marketing season or crop year and should not be confused with **cash receipts** from these crops, which are calculated on a single calendar year. The season average price is applied to utilized production to compute **value of production**.

Price and value for citrus fruits are based on equivalent packinghouse door returns for the entire data series. The processing price for berries is based on equivalent returns at the processing plant door. The fresh market price is on a packed and loaded basis, F.O.B. shipping point.

1/ Return at processing plant door or packinghouse door.

2/ Acres of raisin type grapes enrolled in the California Raisin Industry Diversion (RID) program were; 1987, 15,000; 1988, 25,000; 1991, 20,000; 1992, 12,500; 1993, 20,000; 1994, zero; 1995, 25,000; 1996, zero. These acres were deducted from bearing acres before calculating yield.

3/ Raisin type production is the fresh equivalent of dried and not dried.

4/ Total value based on grower return.

5/ Reported as miscellaneous after 1989.

6/ Acreage by county, variety, and year of planting for 1996 are available upon request.

7/ These crops are almond hulls, black walnuts, jojobas (until 1991), limes, persimmons, pomegranates (starting in 1990), and in 1991, bushberries. Acres exclude almond hulls.

- 1/ Dried and frozen fruit included in total processed to avoid disclosure of individual operations.
- 2/ Processed fruit included in fresh market total to avoid disclosure of individual operations.
- 3/ Total processed includes canned, crushed, frozen, and brined.
- 4/ For 1987-96, prices for processing and fresh totals were not published to avoid disclosure of individual operations. Small quantities processed included in fresh to avoid disclosure of individual operations.
- 5/ Includes substandard raisins diverted to other uses.
- 6/ Processed and fresh fruit not published to avoid disclosure of individual operations but included in total utilized.
- 7/ Limited and undersized combined prior to 1988.
- 8/ Processed mostly canned, but includes other small quantities not published separately to avoid disclosure of individual operations.
- 9/ Pomegranates reported as miscellaneous after 1989 crop.

1/ Equivalent packinghouse door returns.

2/ Season average prices for all grapefruit are derived by weighting the season average prices for each area by their carton weights.

3/ Prior to 1993-94 net weight per carton was 32 pounds.

4/ Estimates for "Grapefruit, Desert" and "Grapefruit, Other" were combined to "Grapefruit, All" starting in 1995-96.

# CALIFORNIA LIVESTOCK AND DAIRY

## SUMMARY OF LIVESTOCK INVENTORY AND CASH RECEIPTS

Livestock cash receipts totaled \$6.21 billion, 12% above 1995.

Total production of the three red meat species, at 2.05 billion pounds, was 3% below last year's production. All cattle and calf marketings, at 1.91 billion pounds, were down 3% from a year ago. Sheep and lamb marketings of 56.6 million pounds were down 6%. Hog and pig marketings of 76.3 million pounds were 14% below a year ago.

Poultry production, at 1.66 billion pounds, decreased 2% from 1995. Broiler production of 1.17 billion pounds decreased 1% from the previous year. Turkey production was 7% higher at 493 million pounds.

Milk production, at 25.9 billion pounds, was 2% above a year ago. Egg production, at 6.57 billion eggs, was up 2%. Honey production of 27.3 million pounds decreased by 30% from the 1995 production year. Wool production of 4.86 million pounds was 7% less than 1995.

<sup>1/</sup> Live weight; adjustments made for changes in inventory and for inshipments.

<sup>2/</sup> Live weight; excludes custom slaughter for use on farms where produced and interfarm sales within the State.

<sup>3/</sup> Receipts from marketing and sale of farm slaughter.

<sup>4/</sup> Hogs and pigs receipts for 1995 and 1996 include allowance for higher average price of State inshipments and outshipments of feeder pigs.

# **CALIFORNIA VEGETABLES AND MELONS**

## **SUMMARY OF VEGETABLE AND MELON CROPS**

California produced 20.7 million tons of vegetables and melons in 1996, 4% more than in 1995. Total value of vegetable production was \$4.24 billion, down 9% from 1995.

The Golden State continues to lead the Nation in vegetables and melons, accounting for 33% of the harvested acres, 55% of the production, and 52% of the total value.

The vegetable and melon estimates include commercial production, excluding garden production and vegetables grown for seed. Prices for processing crops and processed segments of dual utilization crops are based upon equivalent returns at the processing plant door.

For fresh market sales, the price is on a packed and loaded basis, F.O.B. shipping point. Not all data are published for California to avoid disclosure of individual plants.

1996	176,475	---	---	---	825,000	

a/ The processed price is based on equivalent returns at the processing plant door. The fresh market price is on a packed and loaded basis, f.o.b. shipping point.

b/ Program initiated for 1992.

c/ Fresh market and processed acreage separated starting in 1993.

d/ Information unavailable due to disclosure.

e/ Onion production includes quantity harvested, but not marketed because of loss during storage (shrinkage): 1987 -- 320,000 cwt., 1988 -- 280,000 cwt., 1989 -- 200,000 cwt., 1990 -- 234,000 cwt., 1991 -- 174,000 cwt., 1992 -- 275,000 cwt., 1993 -- 313,000 cwt., 1994 -- 248,000 cwt.; 1995 -- 253,000 cwt.; 1996 -- 270,000 cwt. Storage loss amounts are excluded when computing total value.

f/ Miscellaneous vegetables and melons include: Green lima beans for processing, oriental vegetables, green peas, chili peppers, squash, etc. The new crops added in 1992 are excluded from the 1992 to present miscellaneous totals. Miscellaneous figures come from County Agricultural Commissioners.
