

CALIFORNIA AGRICULTURE OVERVIEW

1997

CALIFORNIA'S GROSS CASH INCOME JUMPS 6% TO A NEW RECORD HIGH

Agricultural production and gross cash income in 1997 rose to a record level of \$26.8 billion, 6% above last year. Cash receipts from farm marketings totaled \$25.3 billion, up 8% from 1996; other farm related income totaled \$1.50 billion. Of the total gross income, fruits and nuts comprised 28%; livestock and poultry, 23%; vegetables and melons, 22%; field crops, 12%; nursery, greenhouse products, and Christmas trees, 9%. Fruit and nut cash receipts jumped 14% to \$7.49 billion, while livestock and poultry increased 1% to \$6.29 billion. Vegetable crops increased 10% to \$5.97 billion, field crops increased 6% to \$3.17 billion, and nursery and greenhouse products increased 3% to \$2.35 billion. Notable increases in marketings were as follows: cotton, +18%; all hay, +14%; rice, +33%; sugar beets, +23%; apricots, +23%; cherries, +40%; grapes, +29%; Clingstone peaches, +25%; Navel oranges, +12%; lemons, +21%; strawberries, +17%; almonds, +11%; pecans, +206%; pistachios, +67%; walnuts, +8%; asparagus, +44%; Brussels sprouts, +33%; cabbage, +39%; carrots, +24%; celery, +38%; garlic, +33%; lettuce, +20%; cantaloups, +9%; honeydews, +52%; fresh market tomatoes, +21%; and cattle and calves, +18%. Significant decreases in marketings occurred in; nectarines, -15%; olives, -33%; Freestone peaches, -39%; plums, -21%; grapefruit, -39%; tangerines, -17%; cucumbers, -29%; onions, -10%; processing tomatoes, -15%; potatoes, -21%; barley, -52%; wheat, -26%; turkeys, -9%; and milk and cream, -3%.

AMPLE WINTER PRECIPITATION, WARM, DRY SPRING AND MILD TEMPERATURES DURING THE GROWING SEASON RESULTS IN NEARLY IDEAL GROWING CONDITIONS.

The Golden State experienced a wide variety of weather during the growing season (July 1996-June 1997). Precipitation during the winter months was near normal, although severe flooding occurred in some of the northern California counties in late December 1996 and early January 1997. Most of the damage from flooding occurred to infrastructures such as roads, levees, and canals. An early spring with mild temperatures and dry weather resulted in early crop growth. Most fruit and nut crops experienced nearly ideal weather during the critical pollination period and consequently, good fruit sets were realized.

Crop progress of most crops was ahead of normal throughout the year. The harvest progressed rapidly, and was generally completed ahead of schedule. The weather during the summer growing season was mild, with very few extremely hot days. The conditions were ideal for crop production and as a result several crops had record production. All three major nut crops had record production in 1997; almonds, up 48%, pistachios, up 71%, and walnuts, up 29%. Wine and table type grapes also reached record production. Wine type grapes were up 32% and table type, up 39%. Raisin type grapes were up 31%, however, this was not a record. Nectarine and Freestone peach production increased 7% and 10%, respectively to record highs. Other notable increases in production from the previous year were as follows: apricots, +74%; cherries, +100%; Valencia oranges, + 20%; pecans, + 92%; bushberries, +26%; dry beans, + 28%; corn for grain, +26%; Pima cotton, +12%; hay, +8%; rice, +13%; sugar beets, +23%; broccoli, +11%; cabbage, +17%; carrots, +20%; cantaloups, +11%; honeydews, +35%; and fresh market tomatoes, +11%. Significant declines in production were as follows; olives, -37%; barley, -18%; Upland cotton, -8%; winter wheat, -21%; garlic, -9%; and processing tomatoes, -12%.

California continues to lead the Nation in milk production, which was up 7% from a year ago. Milk is also the Golden State's leading commodity. Cattle and calves' production increased 5% from 1996.

CALIFORNIA FACTS

Some 350 crops are recognized in California, including seeds, flowers and ornamentals.

This report contains information about 65 major crops grown on a large commercial scale in California:

13 Field Crops
25 Fruits and Nuts
25 Vegetables and Melons
Nursery Products and Cut Flowers

In addition, data are shown for 10 livestock, poultry, and other products.

California leads the Nation in the crops shown in "California's Top Twenty" table. A large number are specialty crops in which the Golden State accounts for most of the U.S. production.

CALIFORNIA'S LEADING FARM PRODUCTS

California's "Top Twenty" crop and livestock commodities account for 77% of the State's gross farm income.

California's Diversity

California agriculture is considered one of the most diversified in the world, with no one crop dominating the State's farm economy.

This is illustrated by the fact that only two products exceed 10%, and the five leading commodities account for about 45%, of the State's total gross farm income.

California continues to lead the Nation with many commodities, primarily fruit, nut, and vegetable crops. These crops account for over half of the Nation's production.

CALIFORNIA 1997 FARM FACTS

About 12.1% of the national gross cash receipts for farming is produced in California on 84,000 farms.

This constitutes 4.1% of the Nation's total farms (based on the Census of Agriculture definition of farms as places with annual sales of agricultural products of \$1,000 or more).

El Nino Storms Saturate California

Unlike El Nino of 1982-83 which started in September and damaged primarily tomatoes, grapes, and other late season crops, El Nino of 1997-98 held off until January 1998. Looking back on the 1997-98 weather year that ended on June 30, California growers were assessing damages from the incessant rainfall. The soggy coastal valleys remained wet the first half of 1998 resulting in delayed planting, damaged produce, and high supermarket prices for California vegetables. Salinas Valley lettuce and broccoli were in short supply. Monterey County strawberries turned mushy. Roads and bridges washed out. Levees were threatened or breached as rivers peaked and the rain kept falling.

Precipitation records were being broken all over the State as the central valley spring began to emerge. Despite the blossoming of almonds and cherries, bees were hiding in hives rather than pollinating. Cool weather and rainfall continued. State and Federal disaster declarations made headlines. Forty-two of California's 58 counties were declared major disaster areas. Governor Wilson mobilized emergency preparedness and appointed special flood teams. If a warm, wet front had hit the Sierra snow pack, the magnitude of the disaster would have been unimaginable. Many remained on alert preparing for the worst.

California's agricultural producers surveyed the scene and continued working to restore order. Plans were thwarted. The Artichoke Festival was canceled. Standing water delayed spring planting of tomatoes and field crops. Fungal problems abounded in orchards and vineyards. Stone fruit trees suffered damaged roots as they stood in totally saturated soils. Bees remained sluggish and slow to pollinate. Inaccessibility hindered or prevented normal cultural activities. Windrowed alfalfa was made moldy by rain. Dairy cows were miserably wet resulting in loss of milk production.

As spring progressed, the rain and cool weather continued. Almonds, walnuts, and pistachios were slow to develop. Stone fruit suffered brown rot. Some cotton fields remained too wet to be planted in time to grow a crop. Many planted cotton fields were later plowed under for failure to thrive. With expected Upland cotton production down 34 percent from last year, weather related cotton losses will be quite high. Delays to rice planting and development were nearly unprecedented. A strong low-pressure system set up over northern California and brought record late-May rainfall and well below normal temperatures to much of the State for the Memorial Day weekend. Romaine lettuce shortages frustrated grocers and restauranteurs.

Conditions worsened in the Fresno area when the first weekend in June brought nearly two inches of rainfall and cool temperatures. The cherry crop suffered in quantity and quality, since it was rained on during bloom, ripening, and harvest. Losses to cherry growers for the 1998 crop were estimated to exceed \$70 million. Bunch rot became a concern to table grape growers in that area. As the weather/water year closed on June 30, 1998, many areas of the State had accumulated precipitation totals more than twice normal for the season. Some precipitation totals for 1997-98, as a percentage of normal were as follows: Monterey, 250%; Bakersfield, 247%; Riverside, 221%; Santa Maria, 261%; Salinas, 276%. The El Nino related damages to California's agriculture are estimated to exceed half a billion dollars.

**CROP AND LIVESTOCK COMMODITIES
IN WHICH CALIFORNIA LEADS THE NATION**

Alfalfa Hay	Indoor Plants
Alfalfa Seed	Kiwifruit
Almonds	Ladino Clover Seed
Apricots	Lemons
Artichokes	Romaine Lettuce
Avocados	Leaf Lettuce
Bedding Plants	Head Lettuce
Bell Peppers	Milk
Bermuda Grass Seed	Nectarines
Blackeye Beans	Olives
Broccoli	Onions
Brussels Sprouts	Oriental Vegetables
Bulbs	Parsley
Cantaloupes	Peaches
Carrots	Pears, Bartlett
Casaba Melons	Persian Melons
Cauliflower	Persimmons
Celery	Pigeons & Squabs
Chicory	Pistachios
Chinchillas	Plums
Chinese Cabbage	Pomegranates
Chinese Peas	Prunes
Crenshaw Melons	Rabbits
Currants	Raisins
Cut Flowers	Safflower
Dates	Sod
Dry Baby Lima Beans	Spinach
Dry Large Lima Beans	Strawberries
Figs	Sudan Grass
Garbanzo Beans	Sweet Rice
Garlic	Table Grapes
Goat's Milk	Processing Tomatoes
Green Lima Beans	Vegetable & Flower Seed
Green Onions	Walnuts
Greenhouse Vegetables	Watermelon
Herbs	Wild Rice
Honey	Wine Grapes
Honeydew Melons

Net farm income	5,921,631	5,823,978	4,860,204	5,891,511	5,790,885

1/ A positive value of inventory change represents current-year production not sold by December 1. A negative value is an offset to production from prior years included in current-year sales.

2/ Final sector output is the gross value of the commodities and services produced with a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-of-production. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

CALIFORNIA FIELD CROPS

SUMMARY OF FIELD CROPS

California's 1997 field crop production was worth \$3.82 billion at the farm-gate level. This value was 3% above the previous year.

Hay, corn for grain, rice, and sugar beets recorded significantly higher farm returns. Hay prices were up 14% from 1996, while yield and production were up 4 and 8%, respectively. Total value of corn for grain was up 19%, primarily due to an 18% increase in harvested acreage, which offset a 5% drop in average price. Rice returns were up 17% as yields per acre jumped 11% from the disease-plagued 1996 crop.

Wheat, Upland cotton, barley, and oats showed significantly lower farm returns. Winter wheat yields were up 9%, but harvested acreage was down 27%, and average prices fell 22%, which brought the total value down 39%. Durum wheat returns were 18% below 1996, mainly due to a 17% decrease in average price, although a 4% increase in harvested acreage was partially offsetting. Upland cotton acreage harvested was down 12%, but slightly higher yields were offset by lower prices, bringing total value down 11% from the previous year. Barley acreage, yields, and prices were considerably below 1996 levels, resulting in a 35% decline in total farm returns.

The average value per harvested acre in 1997 increased to \$733 from the \$700 per acre value in 1996. Production of the major field crops totaled 29.4 million tons, up 11% from the 26.5 million tons produced in 1996.

Hay was the State's highest valued field crop with a total of \$1.04 billion. Nationally, California ranked second in all hay production with 8.62 million tons produced, at an average price of \$123 per ton.

Upland cotton was California's second leading field crop, with a total value of \$775 million. At the U.S. level, the State ranked second in production with a total of 2.19 million bales produced.

- a/ Production is on a clean basis.
- b/ Estimate discontinued.
- c/ Excludes beans grown for garden seed.
- d/ Not estimated.
- e/ Cotton: 480 lbs. net-weight per bale.
- f/ Estimated marketings of alfalfa and other hay used as weights to calculate all hay price for 1989-97.
- g/ Not available at publication.
- h/ Excludes sweet and wild rice.
- i/ Includes some acreage carried over and harvested the following spring.

TOTAL ALL PLANTS 5/	578	---	---	---	---	---	---	651,555

1/ The total covered growing area of 130,415,000 square feet consisted of the following: 19,518,000 square feet of shade and temporary cover; 13,904,000 square feet of glass; 45,132,000 square feet of fiberglass and other rigid greenhouses; and 51,861,000 square feet of film plastic (single/multi) greenhouses. In addition, plants were produced on 8,069 acres of open ground.

2/ For potted plants, price represents a weighted average for plants sold in pots less than 5 inches and in pots 5 inches or more.

3/ Total includes Gladioli, which are not published to avoid disclosure of individual operations.

4/ Total includes Leatherleaf Ferns, which are not published to avoid disclosure of individual operations.

5/ Based on equivalent wholesale value of all sales for all crops, except potted foliage plants which are based on net value of sales.

TOTAL ALL PLANTS 5/	943	---	---	---	---	---	---	729,257

1/ The total covered growing area of 128,145,000 square feet consisted of the following: 19,531,000 square feet of shade and temporary cover; 14,964,000 square feet of glass; 41,286,000 square feet of fiberglass and other rigid greenhouses; and 52,364,000 square feet of film plastic (single/multi) greenhouses. In addition, plants were produced on 7,977 acres of open ground.

2/ For potted plants, price represents a weighted average for plants sold in pots less than 5 inches and in pots 5 inches or more.

3/ Total includes Gladioli, which are not published to avoid disclosure of individual operations.

4/ Total includes Leatherleaf Ferns, which are not published to avoid disclosure of individual operations.

5/ Based on equivalent wholesale value of all sales for all crops, except potted foliage plants which are based on net value of sales.

FRUIT AND NUT CROPS

SUMMARY OF FRUIT AND NUT CROPS

California produced 15.6 million tons of fruit and nut crops in 1997, 16% more than in 1996. The Golden State grew 42% of U.S. fruit and nut production in 1997, up slightly from the previous year. The total value of fruit and nut production was \$7.55 billion in 1997, up 16% from 1996. This was 59% of the U.S. total value. Record values of production were set for almonds, avocados, all grapes, lemons, all oranges, strawberries, tangerines, and pistachios. The top value fruit and nut crops in California in 1997 were grapes at \$2.82 billion and almonds at \$1.13 billion, both record highs. California accounts for nearly all of the U.S. production of dates, figs, kiwifruit, nectarines, olives, almonds, pistachios, and English walnuts.

California dominates U.S. production of apricots, avocados, grapes, lemons, plums, prunes, and strawberries. Several crops had major changes in production from 1996 to 1997. They include the following changes: apricots, up 74%; cherries, up 100%; grapes up 33%; Valencia oranges, up 20%; almonds, up 48%; pecans, up 92%; pistachios, up 71%; walnuts, up 29%; bushberries, up 26%; and olives, down 37%.

Precipitation during the winter months was near normal, although some severe flooding occurred in late December 1996 and early January 1997. An early and warm spring allowed the fruit and nut crops to bloom early and ideal weather during the critical pollination period resulted in good fruit sets. Although winter temperatures were above normal, weather during the growing season was nearly ideal for most crops and as a result, several crops had record production. Crop progress was ahead of normal all year and harvest progressed rapidly, generally completed ahead of schedule. The weather conditions were good throughout the entire season and, consequently, the fruit quality was very good.

NOTES FOR USERS

Total production is the quantity actually harvested plus quantities that would have been acceptable for fresh market or processing, but were not harvested. It also includes fruit harvested, but not sold due to marketing conditions. **Utilized production** is the amount sold plus the quantities used at home or held in storage. **Crop year production** for citrus and avocados are from the bloom of the first year shown. For example, 1996-97 would represent the 1997 production from the 1996 bloom.

Utilization refers to the first, but not necessarily final, utilization. For example, frozen fruit used for preserves is included as frozen. **Canned** includes all canned products -- jam, jelly, baby food, nectar, juice, puree, and all fruit packs combined.

The price quoted is at the packinghouse door, which includes the transportation costs. Drying costs are excluded from prices on all fruit crops, except grapes. **Crop value** estimates cover the marketing season or crop year and should not be confused with **cash receipts** from these crops, which are calculated on a single calendar year. The season average price is applied to utilized production to compute **value of production**.

Price and value for citrus fruits are based on equivalent packinghouse door returns for the entire data series. The processing price for berries is based on equivalent returns at the processing plant door. The fresh market price is on a packed and loaded basis, F.O.B. shipping point.

- 1/ Return at processing plant door or packinghouse door.
 2/ Acres of raisin type grapes enrolled in the California Raisin Industry Diversion (RID) program were: 1988 -- 25,000; 1991 -- 20,000; 1992 -- 12,500; 1993 -- 20,000; 1994 -- zero; 1995 -- 25,000; 1996 and 1997 -- zero. These acres were deducted from bearing acres before calculating yield.
 3/ Raisin type production is the fresh equivalent of dried and not dried.
 4/ Total value based on grower return.
 5/ Reported as miscellaneous after 1989.
 6/ Acreage by county, variety, and year of planting for 1997 are available upon request.
 7/ These crops are almond hulls, black walnuts, jojobas (until 1991), limes, persimmons, pomegranates (starting in 1990), and in 1991, bushberries. Acres exclude almond hulls.

DRYING RATIO -- TONS OF GREEN FRUIT REQUIRED TO PRODUCE ONE DRIED TON

- 1/ Dried and frozen fruit included in total processed to avoid disclosure of individual operations.
- 2/ Processed fruit included in fresh market total to avoid disclosure of individual operations.
- 3/ Total processed includes canned, crushed, frozen, and brined.
- 4/ For 1988-97, prices for processing and fresh totals were not published to avoid disclosure of individual operations. Small quantities processed included in fresh to avoid disclosure of individual operations.
- 5/ Includes substandard raisins diverted to other uses.
- 6/ Processed and fresh fruit not published to avoid disclosure of individual operations, but included in total utilized.
- 7/ Processed mostly canned, but includes other small quantities not published separately to avoid disclosure of individual operations.
- 8/ Pomegranates reported as miscellaneous after 1989 crop.

- 1/ Price and value are based on the edible portion of the crop only. Included in production are inedible quantities of no value as follows: 1988 -- 18.5 million pounds, 1989 -- 18.5 million pounds, 1990 -- 17.0 million pounds, 1991 -- 15.9 million pounds, 1992 -- 16.2 million pounds, 1993 -- 10.3 million pounds, 1994 -- 14.7 million pounds, 1995 -- 14.8 million pounds, 1996 -- 20.8 million pounds, 1997 -- 30.0 million pounds.
- 2/ Data for 1997 acreage by county, variety, and year of planting available upon request.
- 3/ Pecan production data begins with the 1988 crop.
- 4/ Data for 1995-1997 walnut acreage was revised based on change in bearing years.

1/ Equivalent packinghouse door returns.

2/ Estimates for "Grapefruit, Desert" and "Grapefruit, Other" were combined to "Grapefruit, All" starting in 1995-96. Season average prices for all grapefruit are derived by weighting the season average prices for each area by their carton weights. Prior to 1993-94, net weight per carton for Desert Valley was 32 pounds.

1/ Live weight; adjustments made for changes in inventory and for inshipments.

2/ Live weight; excludes custom slaughter for use on farms where produced and interfarm sales within the State.

3/ Receipts from marketing and sale of farm slaughter.

4/ Hogs and pigs receipts for 1995 and 1996 include allowance for higher average price of State inshipments and outshipments of feeder pigs.

CALIFORNIA VEGETABLES AND MELONS

SUMMARY OF VEGETABLE AND MELON CROPS

California produced 23.5 million tons of vegetables and melons in 1997, 3% less than in 1996. Total value of vegetable production was \$5.88 billion, up 11% from 1996.

The Golden State continues to lead the Nation in vegetables and melons, accounting for 34% of the harvested acres, 53% of the production, and 52% of the total value.

The vegetable and melon estimates include commercial production, excluding garden production and vegetables grown for seed. Prices for processing crops and processed segments of dual utilization crops are based upon equivalent returns at the processing plant door.

For fresh market sales, the price is on a packed and loaded basis, F.O.B. shipping point. Not all data are published for California to avoid disclosure of individual plants.

- a/ The processed price is based on equivalent returns at the processing plant door. The fresh market price is on a packed and loaded basis, f.o.b. shipping point.
- b/ Program initiated for 1992.
- c/ Fresh market and processed acreage separated starting in 1993.
- d/ Information unavailable due to disclosure.
- e/ Onion production includes quantity harvested, but not marketed because of loss during storage (shrinkage): 1988 -- 280,000 cwt., 1989 -- 200,000 cwt., 1990 -- 234,000 cwt., 1991 -- 174,000 cwt., 1992 -- 275,000 cwt., 1993 -- 313,000 cwt., 1994 -- 248,000 cwt.; 1995 -- 253,000 cwt.; 1996 -- 270,000 cwt.; 1997 -- 258,000 cwt. Storage loss amounts are excluded when computing total value.
- f/ Miscellaneous vegetables and melons include: Green lima beans for processing, oriental vegetables, green peas, chili peppers, squash, etc. The new crops added in 1992 are excluded from the 1992 to present miscellaneous totals. Miscellaneous figures come from County Agricultural Commissioners.
