

Agriculture Statistical Review

Overview

When people think of California, they generally think of Disneyland, Hollywood, the Beach Boys, beautiful weather, earthquakes, traffic problems, and millions of people but seldom do they think of agriculture. Think again. The Golden State is also home to the largest food and agricultural economy in the nation. No other state even comes close. California's farmers and ranchers have made this state the leader in agricultural production for more than 50 years.

Got milk? You better believe we do. California produces almost one out of every five glasses of milk in the nation. The dairy industry continues to grow at an astonishing rate with milk production jumping 6 percent from 1999 to 2000. California also has some of the largest dairies in the country with more than 600 cows on an average dairy, while the United States average is less than 100. In 2000, the average milk production per cow in California was 21,169 pounds, 16 percent higher than the national average.

And no, you didn't just hear it through the grapevine. California produces most of the grapes grown in the United States. Are you ready to toast your friends with a glass of wine? Chances are it was produced by one of the nearly 1,100 wineries in the state. Warm days and cool nights are very conducive to growing grapes, and California now produces some of the best wine in the world. In 2000, 92 percent of all grapes (raisin, table and wine) produced came from right here in the Golden State.

Are you hungry for a fruit, nut, or vegetable? Flip a coin. Since the state grows more than half of the nation's fruits, nuts, and vegetables, there's a fifty-fifty chance it's from California. Oh, and don't forget artichokes, brussels sprouts, almonds, dates, figs, kiwifruit, nectarines, olives, pistachios, dried plums (prunes), and walnuts – they will be hard to find growing in any other state. Don't worry though; these are easy to find in your grocery store with a proud label indicating they're California grown.

And California agriculture is more than just food. Golden State farmers also contribute to the creation of products related to manufacturing, health care, printing, education, recreation, transportation, construction, entertainment, and personal care. There's everything

from detergents, x-ray film, antibodies, paper, shampoo, toothpaste, footballs, shoes, flowers, tires and antifreeze to baseball bats.

The Golden State is, by far, the number-one agricultural producer and exporter in the United States. In fact, last year the agricultural marketings reached \$27.2 billion. And for those in Texas who like to talk big, California's total represents more agriculture than Texas and Iowa combined – the second and third leading agricultural states in the nation.

So, if it's breakfast, lunch, dinner, or almost anything else, remember it was probably grown right here in California.

California's Gross Cash Income for 2000

Agricultural production and gross cash income in 2000 increased to \$27.2 billion, 1 percent higher than the previous year and fractionally less than the record income set in 1997. Cash receipts from farm marketings totaled \$25.5 billion, up 2 percent from 1999; other farm related income totaled \$1.65 billion.

The chart below indicates total gross cash income from all farm marketings for 2000. Fruit and nut cash receipts, at \$7.31 billion, jumped 7 percent from last year and comprised 27 percent of the total. Vegetable receipts also increased 7 percent from \$6.25 billion in 1999 to \$6.67 billion in 2000. Livestock and poultry dropped 6 percent and comprised 23 percent of the total. Floriculture, with 10 percent of the total was down 1 percent from last year. Field crops accounted for 9 percent of the total; their cash receipts dropped 1 percent from the previous year.

The Golden State's two leading commodities in cash receipts are milk with \$3.70 billion and grapes with \$2.84 billion. Nationally, California has about 19 percent of the total milk receipts and 91 percent of the grape receipts. Growth in these two commodities over the last ten years is shown in the following charts.

**NOTABLE INCREASES IN
MARKETINGS WERE AS FOLLOWS:**

Broccoli	24%
Cabbage	48%
Cauliflower	28%
Celery	48%
Corn for Grain	30%
Cotton	34%
Grapes, Wine	23%
Hogs and Pigs	22%
Lettuce	31%
Pistachios	46%
Raspberries	32%
Spinach	29%
Tangerines	28%
Tomatoes, Fresh Market	31%

**SIGNIFICANT DECREASES IN
MARKETINGS OCCURRED IN THE
FOLLOWING:**

Apples	38%
Brussels Sprouts	27%
Carrots	23%
Corn, Sweet	26%
Dates	35%
Grapefruit	25%
Grapes, Raisin	28%
Olives	40%
Oranges, Valencia	55%
Tomatoes, Processing	28%

California Farm Facts

California has 87,500 farms, which constitute about 4 percent of the nation’s total farms. However, these farms account for 13 percent of the national gross cash receipts from farming. Some 350 crops are recognized in California, including seeds, flowers and ornamentals. This directory contains information on roughly 67 major crops grown on a large commercial scale in California:

- 13 field crops
- 25 fruit and nuts
- 29 vegetable and melons
- Nursery products and cut flowers

In addition, data are shown for 11 livestock, poultry and other products.

California’s Top 20 Commodities

California’s top 20 crop and livestock commodities account for 72 percent of the state’s gross farm income. A large number of these are specialty crops in which the Golden State accounts for most production in the United States. Milk and Cream production remained number one in 2000, followed by grapes and nursery products.

Leading Counties

California has some of the most agriculturally productive counties in the country. According to the 1997 Census of Agriculture’s ranking of market value of agricultural products sold, eight of the nation’s top ten producing counties are in California.

Fresno is the leading agriculture county in the nation and in 2000 reached \$3.42 billion in agricultural value. If ranked separately, the value of agricultural commodities in Fresno County would rank it ahead of over half the states in cash receipts.

Weather Highlights for 2000

The winter weather of 1999-2000 was rather uneventful. Rainfall was abundant and supplied an ample snow pack that provided moisture for the remainder of the year. Heavy rainfall in January and February of 2000 delayed many cultural activities such as pruning, planting, spraying, and ground preparation. The cold temperatures provided sufficient chilling for a good dormancy, which is important for many of the non-citrus crops. The almonds began blooming in late February and reached full bloom by March 1. Bee colonies were placed in almond orchards for pollination, but the cool, wet weather often hampered bee activity. Stone fruit blossom began in early March and warm weather following in March and April accelerated crop progress. Development of most fruit and nut crops was about normal throughout the remainder of the growing season, when temperatures ranged from normal, to slightly below. Generally speaking, most fruit crops had good quality, but sizes were small. The mild weather during the growing and harvest seasons allowed growers to produce a crop with few problems.

Rainfall disrupted planting and slowed development of many winter vegetables. However, warm weather in April allowed crops to be planted and to progress normally. During May, June, and July temperatures ranged both above and below normal, but there were no real extremes. Most vegetable crops developed normally and harvest proceeded on schedule. However, October and November's cool, wet weather slowed development and lowered quality of some vegetables produced in the San Joaquin Valley. Good supplies still came from the Salinas Valley.

Cotton was planted on schedule, but rainfall and cool temperatures during April forced some replanting. Much of the American Pima cotton that was abandoned in the spring was replanted to Upland cotton. Most other field crops progressed normally throughout the year, with only occasional problems developing. Insect pressure was generally light and good fall weather allowed harvest to progress on schedule.

California's Top Twenty Commodities for 2000

Crop and Livestock Commodities in which California Leads the Nation

Almonds	Figs	Melons, Crenshaw	Pistachios
Apricots	Flowers, Bulbs	Melons, Honeydew	Plums
Artichokes	Flowers, Cut	Melons, Persian	Plums, Dried
Asparagus	Flowers, Potted Plants	Milk	Pomegranates
Avocados	Garlic	Milk, Goat	Rabbits
Beans, Black-eyed	Grapes, Raisins	Nectarines	Rice, Sweet
Beans, Dry Baby Lima	Grapes, Table	Nursery, Bedding Plants	Safflower
Beans, Dry Large Lima	Grapes, Wine	Nursery Crops	Seed, Alfalfa
Beans, Garbanzo	Hay, Alfalfa	Olives	Seed, Bermuda Grass
Broccoli	Hay, Small Grain	Onions	Seed, Ladino Clover
Brussels Sprouts	Herbs	Onions, Green	Seed, Sudan Grass
Cabbage, Chinese	Kale	Parsley	Seed, Vegetable and Flower
Carrots	Kiwifruit	Peaches, Clingstone	Spinach
Cauliflower	Lemons	Peaches, Freestone	Strawberries
Celery	Lettuce, Head	Pears, Bartlett	Tomatoes, Processing
Chicory	Lettuce, Leaf	Peas, Chinese	Vegetables, Greenhouse
Currants	Lettuce, Romaine	Peppers, Bell	Vegetables, Oriental
Dates	Melons, Cantaloupe	Persimmons	Walnuts
Escarole/Endive	Melons, Casaba	Pigeons and Squabs	

California is the sole producer (99% or more) of the commodities in bold.

^{1/} A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales.

^{2/} Final sector output is the gross value of commodities and services produced within a year. Net value-added is the sector's contribution to the national economy and is the sum of the income from production earned by all factors-of-production. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

Commodity Rank, Acreage, Production, Value and Leading Producing Counties, 2000

1/ Based on quantity produced for crops and on quantity marketed for livestock and poultry products.

2/ Based on value of quantity harvested for crops, value of quantity marketed for livestock, and value of quantity produced for poultry products.

3/ Based on values published in the county agricultural commissioners' annual crop reports.

4/ Share of U.S. production based on 1997 Census of Agriculture.

5/ The 2000 price and value are based on the 1999 California average price.

6/ Extracted from county agricultural commissioners' annual crop reports.

7/ Includes sunflower, safflower, and canola.

8/ Includes trees, shrubs, vines, bulbs, turf, etc., not included in flowers and foliage category.

9/ Includes cut flowers, potted plants, foliage plants, bedding plants, and indoor decoratives.

California Field Crops

California's 2000 field crop production was worth \$3.20 billion at the farm-gate level. This value was 2 percent higher than the previous year.

The average value per harvested acre increased from \$609 in 1999 to \$642 in 2000. Production of the major field crops in California reached 27.6 million tons, down 4 percent from the 28.6 million tons produced in 1999.

NOTABLE INCREASES IN VALUE OCCURRED AS FOLLOWS:

Corn for Grain	30%
Cotton	34%
Cottonseed	16%

SIGNIFICANT DECLINES IN VALUE OCCURRED AS FOLLOWS:

Dry Beans	14%
Rice	10%
Sugar Beets	12%
Wheat	14%

Cotton was the state's highest-valued field crop with a total of \$898 million, overtaking all hay with a value of \$730 million. Nationally, the Golden State is the leading alfalfa-producing state and ranked second in all cotton and all hay production.

The 34 percent increase in the value of cotton was based on an 8 percent increase in harvested acreage, a 17 percent increase in production, and a 14 percent increase in the unit price. The 2000 cotton crop was planted on schedule, but rainfall and cool temperatures during April forced some replanting. Much of the American Pima cotton that was abandoned in the spring was replanted to Upland. The crop progressed well throughout the year with only occasional problems. Insect pressure was generally light and good fall weather allowed harvest to progress with very few problems.

The large increase in corn for grain production is attributed, almost entirely, to a 27 percent increase in harvested acreage. Rice production actually showed a 19 percent increase in production, but the unit price declined 24 percent resulting in a 10 percent decline in total value. The large decrease in dry bean value is attributed, almost entirely, to a 15 percent decline in harvested acreage, as the unit price remained unchanged from the previous year. Winter wheat production declined 15 percent, while Durum wheat production increased 9 percent. Lower prices for both winter and Durum wheat resulted in a 14 percent decrease for all wheat.

2000	600,000	447,000	2.30	1,026,000	95.00	96,935	

1/ Production is on a clean basis.

2/ Dashes represent data not published due to the estimate being discontinued, not estimated, or not available.

3/ Included in "Beans, Other Dry."

4/ Includes varieties not listed separately. Excludes beans grown for garden seed.

5/ Cotton bales are 480 lbs. net-weight.

6/ Estimated marketings of alfalfa and other hay used as weights to calculate all hay price for 1991-00.

7/ Excludes sweet and wild rice.

8/ Includes some acreage carried over and harvested the following spring.

California Floriculture

Floriculture continued its rapid growth in 2000. The industry enjoyed record wholesale values again this year due to the strength of its leading producing states --- California, Florida, Michigan, Texas and Ohio. These five states account for over half of the total value.

California maintained its position as the leading floriculture state in the nation, with a total wholesale value of \$842 million. This total represents 20 percent of the national value and a 9 percent increase from the previous year. Aided by its favorable coastal climate, California now accounts for 67 percent of the national value for all fresh, cut flowers. At \$286 million in sales, this represents a 2 percent increase over the 1999 total of \$280 million. The rose is the most popular cut flower in the nation, with California producing roughly 68 percent of all fresh, cut roses grown in the United States. While cut flower demand has continued to rise, domestic production has been declining with over two-thirds of the major cut flowers now imported. Most imports are coming from Columbia, Costa Rica, Ecuador, Mexico and the Netherlands.

California's total sales of potted flowering plants decreased 6 percent from \$151 million in 1999 to \$142 million in 2000. California is still the leading state with 18 percent of the national value. Sales of foliage plants showed a 24 percent drop from \$93.8 million in 1999 to \$70.8 million in 2000.

The wholesale value of bedding and garden plants jumped 28 percent from \$234 million in 1999 to \$300 million in 2000. The value for cut, cultivated greens was down 2 percent to \$16.1 million.

The number of floriculture producers in the state has been declining rapidly, and California now has 831 growers compared to 969 in 1999.

1/ The total covered growing area of 116,927,000 square feet consisted of the following: 16,669,000 square feet of shade and temporary cover; 13,286,000 square feet of glass; 31,891,000 square feet of fiberglass and other rigid greenhouses; and 55,081,000 square feet of film plastic (single/multi) greenhouses. In addition, plants were produced on 8,043 acres of open ground.

2/ For potted plants, price represents a weighted average for plants sold in pots less than 5 inches and in pots 5 inches or more.

3/ Total includes Leatherleaf Ferns, which are not published to avoid disclosure of individual operations.

4/ Based on equivalent wholesale value of all sales for all crops, except potted foliage plants which are based on net value of sales.

1/ The total covered growing area of 108,838,000 square feet consisted of the following: 17,710,000 square feet of shade and temporary cover; 15,115,000 square feet of glass; 30,482,000 square feet of fiberglass and other rigid greenhouses; 45,531,000 square feet of film plastic (single/multi) greenhouses; and 8,035,000 open ground.

2/ For potted plants, price represents a weighted average for plants sold in pots less than 5 inches and in pots 5 inches or more.

3/ Data for 1999 and 2000 are not comparable. Data for 1999 represents net value (total sales minus cost of young plants); 2000 data represents wholesale equivalent value of all sales.

4/ Data series began in 2000; 1999 data not available.

5/ Total includes Leatherleaf Ferns, which are not published to avoid disclosure of individual operations.

6/ Total data for 1999 and 2000 are not comparable, total sales of propagative materials were added in 2000. Total foliage for 1999 represents net value (total sales minus cost of young plants); total foliage for 2000 represents the wholesale equivalent value of all sales.

California Fruit and Nut Crops

California produced 15.5 million tons of fruit and nuts in 2000, 21 percent above 1999. This represents 42 percent of the national fruit and nut production. The total value of California's fruit and nut production in 2000 was \$6.98 billion, up 2 percent from the previous year and represents 58 percent of the national total value of fruit and nut crops.

A record value of production was set for avocados, cherries, table grapes, and wine grapes. Grapes continued to be the top-valued fruit and nut crop with \$2.84 billion, up 7 percent from the \$2.66 billion of 1999. California accounts for nearly all the national production of almonds, Clingstone peaches, dates, English walnuts, figs, kiwifruit, nectarines, olives and pistachios.

The Golden State dominates the nation in production of apricots, avocados, grapes, lemons, peaches, plums, and strawberries. Crops with record production in 2000 were wine grapes, Freestone peaches, pistachios and strawberries.

CROPS WITH SIGNIFICANT INCREASES IN PRODUCTION FROM LAST YEAR INCLUDE THE FOLLOWING:

Avocados	18%
Figs	22%
Grapes, Raisin	36%
Grapes, Wine	26%
Kiwifruit	26%
Lemons	17%
Oranges, Navel	91%
Oranges, Valencia	80%
Pecans	79%
Pistachios	98%
Plums, Dried (Prunes)	32%
Tangerines	67%

NOTABLE DECREASES IN PRODUCTION OCCURRED IN:

Almonds	16%
Apples	27%
Dates	35%
Olives	63%
Cherries	42%
Walnuts	16%

In 2000, California's rainfall was above normal during the winter months providing much needed moisture to the soil and trees. The cold temperatures provided sufficient chilling for a good dormancy, which is important for many non-citrus crops. The rains slowed the normal cultural activities such as pruning, spraying, and planting. Almonds began blooming in February and were in full-bloom by March 1. Bee colonies were placed in almond orchards for pollination, but the cool, wet weather hampered the bees' activities. Blooming of the stone fruit began in early March and the warm weather in March and April accelerated crop progress.

Crop development of most commodities was about normal throughout the growing season, when temperatures ranged from normal-to-slightly below. Generally speaking, most crops had good fruit quality, but sizes were small. The weather during the growing and harvest seasons was mild, which allowed growers to harvest their crops without any substantial problems. The grapes had a very good year with good quality and a very large crop.

With the exception of grapefruit, which dropped 1 percent, all citrus crops showed major increases in production from the low 1998-99 frost-affected crops. Navel orange production jumped 90 percent, Valencia oranges rose 80 percent, tangerines went up 67 percent, while lemons were up 17 percent.

1/ Equivalent packinghouse door returns.

2/ Estimates for "Grapefruit, Desert" and "Grapefruit, Other" were combined to "Grapefruit, All" starting in 1995-96. Season average values for all grapefruit are derived by weighting the season average value for each area by their carton weights. Prior to 1993-94, net weight per carton for Desert Valley was 32 pounds.

1/ Return at processing plant door or packinghouse door.

2/ Acres of raisin type grapes enrolled in the California Raisin Industry Diversion (RID) program were; 1990 -- zero; 1991 -- 20,000; 1992 -- 12,500; 1993 -- 20,000; 1994 -- zero; 1995 -- 25,000; 1996,1997, 1998, 1999 and 2000 -- zero. These acres were deducted from bearing acres before calculating yield.

3/ Raisin type production is the fresh equivalent of dried and not dried.

4/ Total value based on grower return.

5/ Acreage by county, variety, and year of planting for 2000 are available upon request.

6/ These crops are almond hulls, black walnuts, jojobas (until 1991), limes, persimmons, pomegranates, and in 1991, bushberries. Acres exclude almond hulls.

1/ Dried and frozen fruit included in total processed to avoid disclosure of individual operations.

2/ Processed fruit included in fresh market total to avoid disclosure of individual operations.

3/ Total processed includes canned, crushed, frozen, and brined.

4/ Prices for processing and fresh totals were not published to avoid disclosure of individual operations. Small quantities processed included in fresh to avoid disclosure of individual operations.

5/ Includes substandard raisins diverted to other uses.

6/ Processed and fresh fruit not published to avoid disclosure of individual operations, but included in total utilized.

7/ Processed mostly canned, but includes other small quantities not published separately to avoid disclosure of individual operations.

8/ Total processing value per ton excludes dried processing.

1/ Excludes raisins produced from table type grapes.
2/ Miscellaneous seedless grapes with Oleate applied.
3/ Missing 2000 data will be available by the end of January 2002.

California Livestock and Dairy

Livestock cash receipts during 2000 totaled \$6.27 billion, down 6 percent from 1999. Most of the decline in value was due to a 9 percent decrease in milk, cream and broilers, and a 10 percent drop in eggs.

The Golden State's dairy industry continued growing as new record highs were set for the number of milk cows and milk production. In 2000, a record-high 32.2 billion pounds were produced, up 6 percent from the previous year. The average number of cows in 2000 was 1.52 million, up 4 percent from 1999. Total milk value was \$3.70 billion, off 9 percent from the previous year. The decline is due to a 14 percent drop in the unit value, from \$13.45 to \$11.50 per hundredweight.

California continues to lead the nation in total milk production, with Wisconsin ranking second and New York third. The five leading counties in milk production and number of milk cows were Tulare, Merced, San Bernardino, Stanislaus, and Kings. Collectively, these counties accounted for approximately two-thirds of the milk production and milk cows in the State.

In the United States, California ranked first in nonfat dry milk production, first in butter production, and second in cheese production. California produced 48 percent of the nation's nonfat dry milk, 28 percent of the butter, and 18 percent of the cheese. Cheddar and mozzarella cheeses constituted approximately three-fourths of the cheese production in California.

The three red meat species (cattle, sheep and hogs) total production was 2.12 billion pounds, up fractionally from the 2.10 billion pounds of a year ago. Total marketings of the three red meat species also showed a slight increase, from 2.62 to 2.63 billion pounds. Cattle and calf marketing were 2.47 billion pounds, 1 percent above last year. Sheep and lamb marketings of 77.3 million pounds were down 4 percent from 1999. Hogs and pig marketings declined 2 percent from the previous year to 79.9 million pounds.

Cattle and calves marketed from California feedlots totaled 608 thousand head, a 3 percent increase from 1999. Turkey production increased 2 percent to 439 million pounds in 2000. Egg production of 6.29 billion eggs was down 5 percent from the previous year. Honey production was 30.8 million pounds, up 2 percent from 1999. Wool production was 4.00 million pounds, up 10 percent from the previous year.

1/ Starting in 1993, the 100+ Head class was broken out into 100-199 Head and 200+ Head classes.

2/ Starting in 1997, the 200+ Head class was broken out into 200+ Head, 200-499 Head, and 500+ Head classes.

Grazing Fee Annual Average Rates, 1991-00 1/

Year	Per Animal Unit <u>2/</u>	Cow-Calf	Per Head
	<i>Dollars Per Month</i>		
1991	9.61	11.63	12.37
1992	10.09	13.29	12.09
1993	10.40	13.30	11.20
1994	11.00	13.10	11.80
1995	10.50	12.80	11.10
1996	10.10	12.20	11.90
1997	10.60	13.00	12.00
1998	11.50	14.50	12.90
1999	12.10	15.00	12.50
2000	12.30	15.50	12.70

1/ The average rates are estimates (rates over \$10.00 are rounded to the nearest dime) based on survey indications of monthly lease rates for private, non-irrigated grazing land from the January Agricultural Survey.

2/ Includes animal unit plus cow-calf rates. Cow-calf rate converted to animal unit (AUM) using (1 aum=cow-calf *0.833).

1/ Live weight; adjustments made for changes in inventory and for inshipments.

2/ Live weight; excludes custom slaughter for use on farms where produced and interfarm sales within the State.

3/ Receipts from marketing and sale of farm slaughter.

4/ Hogs and pigs receipts for 1995 and 1996 include allowance for higher average price of State inshipments and outshipments of feeder pigs.

1/ Publication of livestock county estimates was reinstated in 2001.

2/ Combined in "Other Counties" to avoid disclosure of individual operations.

California Vegetables and Melons

California's diverse climate allows for year-round production of many vegetables, beginning in the desert during the winter months and then heading into the coastal areas and Central Valley as the season progresses.

The Golden State produced 25.9 million tons of vegetables and melons in 2000, 10 percent below 1999. California continues to lead the nation in vegetable and melon production, accounting for 38 percent of acreage harvested, 57 percent of production and 52 percent of the total value.

Total value of vegetable and melon production was \$6.64 billion. Although vegetable and melon production declined, the value of production jumped 7 percent from the previous year. Broccoli, cabbage, cauliflower, celery, lettuce, peppers, spinach, fresh market tomatoes, and watermelons showed large increases in value. Notable decreases in value occurred in brussels sprouts, carrots, sweet corn, garlic, and processing tomatoes.

California produces 95 percent of the processing tomatoes in the country, with most coming from the rich farmland in the Sacramento and San Joaquin valleys. The Golden State also accounts for more than 90 percent of the nation's production of artichokes, brussels sprouts, and celery. Additionally, California is home to more than 75 percent of the national production of broccoli, cauliflower, fresh market carrots, garlic, honeydews, leaf lettuce and fresh market spinach. Monterey County is known worldwide for its abundant, high-quality vegetable crops, particularly artichokes, broccoli, cauliflower, celery, and lettuce.

The production of several vegetable and melon crops declined last year after the very high production of 1999. The 2000 crop year was characterized as a fairly wet February and March, which caused some disruption in planting and slowed development of many vegetables. During April, warm weather enabled the crops to be planted and to progress normally. The months of May, June, and July had both below and above average temperatures, but no real extremes. Most vegetable and melon crops developed normally and harvest proceeded on schedule. However, October and November's cool, wet weather slowed crop development and lowered fruit quality of several fall vegetables, particularly in the San Joaquin Valley. Good supplies still came from the Salinas Valley. Processing tomatoes had a record-high yield, but harvested acreage was down 18 percent and production was 16 percent below the previous year.

NOTABLE CHANGES IN VEGETABLE AND MELON PRODUCTION FROM 1999 TO 2000 WERE AS FOLLOWS:

Commodity	Percent Change
Beans, Snap	+13%
Brussels Sprouts	-19%
Cabbage	+27%
Corn, Sweet	-22%
Garlic	-10%
Melons, Honeydew	+13%
Peppers, Bell	+20%
Tomatoes, Processing	-16%

Note to the Reader

Vegetable and melon estimates include commercial production, but exclude garden production and vegetables grown for seed. Prices for processing crops and processed segments of dual utilization crops are based upon equivalent returns at the processing plant door.

For fresh market sales, the price is on a packed and loaded basis, Free-On-Board (F.O.B.) Shipping Point. To avoid disclosure of individual plants, not all of California's data were published.

Miscellaneous Vegetables and Melons, Fresh Market and Processing <u>9/</u>						
	1991	279,000	---	110,460	---	884,344
	1992	94,000	---	33,040	---	347,442
	1993	164,000	---	58,420	---	656,547
	1994	208,000	---	78,500	---	827,313
	1995	184,000	---	67,200	---	825,877
	1996	238,000	---	86,960	---	953,535
	1997	166,000	---	62,400	---	796,332
	1998	209,000	---	74,800	---	934,815
	1999	206,000	---	84,060	---	927,721
	2000	159,000	---	61,760	---	804,578

1/ The processed price is based on equivalent returns at the processing plant door. The fresh market price is on a packed and loaded basis, F.O.B. shipping point.

2/ Program initiated in 1992.

3/ Starting in 1993, fresh market and processed acreage were published separately.

4/ Program initiated in 2000.

5/ Data not published for 1991.

6/ Onion production includes quantity harvested, but not marketed because of loss during storage (shrinkage): 1991 -- 174,000 cwt., 1992 -- 275,000 cwt., 1993 -- 346,000 cwt., 1994 -- 266,000 cwt., 1995 -- 266,000 cwt., 1996 -- 292,000 cwt., 1997 -- 278,000 cwt., 1998-2000 -- 250,000 cwt. Storage loss amounts are excluded when computing total value.

7/ Includes fresh and processed.

8/ Program initiated in 1998.

9/ Miscellaneous vegetables and melons include: Green lima beans for processing, oriental vegetables, green peas, etc. The new crops added in 1992 and 2000 are excluded from the 1992 to present miscellaneous totals.
