## Agricultural Overview

California agriculture experienced a 9 percent drop in the sales value of its products for 2009. The state's 81,500 farms and ranches received \$34.8 billion for their output last year, down from the all-time high of \$38.4 billion reached during 2008. The state's agricultural sales for 2009 were the third highest recorded, behind only 2008 and 2007.

California's decline in revenue was led by the dairy sector. Dairy producers received \$4.54 billion for their milk production in 2009, down 34 percent from 2008, and down 38 percent from the 2007 record high of \$7.34 billion. Herd size decreased 3 percent from 2008. Milk production from the state's dairy farms decreased 4 percent. Milk prices received by producers continued to fall from \$18.05 in 2007, to \$16.82 in 2008, to \$11.49 per hundred pounds of milk sold in 2009. California produced 20.9 percent of the nation's milk supply last year. Milk prices remained low for the first 7 months before beginning to recover.

California remained the number one state in cash farm receipts in 2009, with its \$34.8 billion in revenue representing 12.3 percent of the U.S. total. The state accounted for 16.5 percent of national receipts for crops, and 6.5 percent of the U.S. revenue for livestock and livestock products.

California's agricultural abundance includes more than 400 commodities. The state produces nearly half of U.S.-grown fruits, nuts, and vegetables. Across the nation, U.S. consumers regularly purchase several crops produced solely in California.

### Top 5 Agricultural States in Cash Receipts, 2009

State	Rank	Total Value Billion Dollars
California	1	34.8
Iowa	2	21.0
Texas	3	16.6
Nebraska	4	15.3
Illinois	5	14.5

### Notable Increases in California Cash Receipts:

Kiwifruit .....	79%
Blueberries .....	46%
Safflower .....	44%
Plums and prunes .....	36%
Walnuts .....	32%
Beans, dry .....	26%
Nectarines .....	24%
Aquaculture .....	22%
Pecans .....	20%

### Notable Decreases in California Cash Receipts:

Wheat .....	-29%
Olives .....	-31%
Other berries .....	-31%
Milk, wholesale .....	-34%
Avocados .....	-36%
Honey .....	-36%
Wool .....	-37%
Misc. fruits & nuts .....	-38%
Oats .....	-38%
Hay .....	-44%
Cotton .....	-52%

### Crop and Livestock Commodities in which California Leads the Nation\*

<b>Almonds</b>	Escarole/Endive	Limes	Plums
Apricots	<b>Figs</b>	Melons, Cantaloupe	<b>Plums, Dried</b>
<b>Artichokes</b>	Flowers, Bulbs	Melons, Honeydew	Puots
Asparagus	Flowers, Cut	Milk	<b>Pomegranates</b>
Avocados	Flowers, Potted Plants	Milk Goats	Raspberries
Beans, Dry Lima	Garlic	Nectarines	<b>Rice, Sweet</b>
Bedding/Garden Plants	<b>Grapes, Raisins</b>	Nursery, Bedding Plants	Safflower
Broccoli	Grapes, Table	Nursery Crops	Seed, Alfalfa
Brussels Sprouts	Grapes, Wine	<b>Olives</b>	Seed, Bermuda Grass
Cabbage, Chinese	Greens, Mustard	Onions, Dry	<b>Seed, Ladino Clover</b>
Cabbage, F.M.	Hay, Alfalfa	Onions, Green	Seed, Vegetable and Flower
Carrots	Herbs	Parsley	Spinach
Cauliflower	Kale	<b>Peaches, Clingstone</b>	Strawberries
Celery	<b>Kiwifruit</b>	Peaches, Freestone	Tangelos
Chicory	Kumquats	Pears, Bartlett	Tangerines
Cotton, American Pima	Lemons	Peppers, Bell	Tomatoes, Processing
Daikon	Lettuce, Head	Persimmons	Vegetables, Greenhouse
<b>Dates</b>	Lettuce, Leaf	Pigeons and Squabs	Vegetables, Oriental
Eggplant	Lettuce, Romaine	<b>Pistachios</b>	<b>Walnuts</b>
			Wild Rice

\*California is the sole producer (99 percent or more) of the commodities in **bold**.

## Farm Facts

In 2009, 81,500 farms operated in California, less than 4 percent of the national total. Over 23 percent of California farms produced commodity sales totaling over \$100,000, compared with 17 percent for the U.S. as a whole. During 2009, California lands devoted to farming and ranching totaled 25.4 million acres, unchanged from 2008. Both the California and U.S. average farm size remained steady from the previous year at 312 and 418 acres, respectively.

### Land Values/Cash Rents

In 2009, the average value of farm real estate increased \$160 per acre to \$6,600 per acre. Farm real estate increased over the past year in California, whereas all types of farmland showed modest decreases across the United States. Irrigated cropland valued at \$11,600 per acre and non-irrigated cropland valued at \$3,400 per acre both decreased 6 and 5 percent in value from the previous year. All cropland was valued at \$9,480 per acre and decreased \$400 per acre from 2008. Pastureland was valued at \$2,900 per acre for 2009, down 4 percent from the previous year.

Because crop and pasture land values decreased from the previous year, so too did their respective rental rates. Irrigated cropland rental rates were valued at \$350 per acre, a decrease of \$10 per acre from the previous year. Similarly, non-irrigated land rental rates decreased 5 percent to \$56 per acre. All cropland was valued at \$274 per acre. Pastureland was valued at \$14 per acre, a decrease of 7 percent from the previous year.

## Leading Counties

California is home to some of the most productive counties in the nation. According to the 2007 Census of Agriculture's ranking of market value of agricultural products sold, nine of the Nation's top 10 producing counties are in California. The sales of these nine counties accounted for 6.6 percent of the Nation's total sales value.

California's counties reported a decrease of 8.5 percent in the value of their agricultural production for 2009. Four counties reported agricultural production exceeding \$3.0 billion each and thirteen counties reported a value of production in excess of \$1.0 billion. Fresno continued as the leading county with an agricultural production value of \$5.37 billion, a decrease of 4.7 percent from the 2008 value. Tulare County was second in value of production with \$4.05 billion, a 19.4 percent decrease from 2008. Monterey had an increase of 5.4 percent in production to \$4.03 billion, moving the county to third in value. Kern's decrease of 10.6 percent dropped their value of agricultural production to \$3.61 billion, fourth in value.

## Top Commodities

California's top 20 crop and livestock commodities accounted for more than \$27.2 billion in value for 2009. Eight commodities exceeded \$1.00 billion in value for 2009. Eleven of the 20 commodities registered an increase in value from the previous year. The same was not true for California's leading commodity, Milk and Cream, which decreased by over \$2 billion in value, due to lower production and lower prices. Final grower returns could change the sales value for hay, berries and other commodities, resulting in an updated dollar amount in next year's report.

### Top 20 Commodities for 2007-2009

Commodity	2007		Value and Rank		2009	
			2008		\$1,000

## Weather Highlights for 2009

January began with cool and foggy weather over much of the interior. Earlier in the month some isolated shower activity occurred along the extreme northern coast and across the far northern counties while Southern California was basked in sunny and unseasonably warm weather. This was followed by a warm front passing through the north coast bringing about rain. The latter part of the month going into early February was dominated by unseasonably warm and dry conditions. Early plantings were progressing well from the recent wet weather while winter wheat and grains were growing well due to warm conditions. For the remainder of the month, the state experienced unsettled weather as a series of low pressure systems brought significant rainfall amounts and snow to northern parts of the state.

Even though temperatures across the state were very mild, rainfall continued in the northern two-thirds of the state throughout the first half of March while Southern California remained dry. The remnant of the month was characterized by fluctuations between low pressure systems which brought scattered showers and high pressure systems which brought mild temperatures.

A series of high pressure ridges brought clear skies and mild temperatures to California in the month of April and mostly throughout the month of May, resulting in above seasonal normal temperatures across the state throughout Memorial Day; however amid these high pressures were moderate precipitation, gusty winds, and cooler temperatures across the state. The heaviest rainfall was focused across the central portion of the state, from the coast to the Sierra Nevada Mountains. High winds throughout much of the Sacramento Valley hampered orchard spraying and bee pollination. A strong offshore flow developed over Southern California, resulting in ideal wildfire conditions along the Santa Barbara region.

June began with some excitements. First, a trough of low pressure slowly moving across the northern part of the state causing unusual cooling and due to this, some locations in the valley broke previous rainfall records. A series of thunderstorms then aligned across the state to create an unusual event. Brief heavy rain, small-sized hail, and frequent dangerous lightning dominated the sky in the path of these thunderstorms. There were nearly 2,800 lightning strikes recorded on the very first week of the month just in the northern part of the state. Most of California stayed relatively cool during the month of June with temperatures in the valley and foothill locations 10 degrees below normal. By the end of the month, temperatures rose drastically through most of the state. Due to rain, wheat harvest slowed and some fruits were lost to splitting.

Typical weather was observed for the month of July. Strong high pressure settled over the Desert Southwest, resulting in a common summer time pattern with very hot temperatures observed across most of California. Fire hazard remained high in some areas due to the extremely dry conditions.

The month of August began with strong high pressure over the entire southwestern portion of the United States, including California, bringing very hot weather to the Golden State. An upper level low pressure system then approached the Central California coast resulting in an increased onshore flow which cooled off many coastal areas as well as the Sacramento-San Joaquin River Delta. This low also sparked a few showers across the mountains, especially across the Northern Sierra Nevada range. It even managed to spread a few sprinkles down to the Northern Sacramento Valley. Although this pattern continued throughout the month, seasonal weather dominated the month. Some cotton fields received their last watering and were treated for aphid as more bolls opened.

Southern California remained under the influence of strong high pressure which brought hotter than normal temperatures to that region at the start of September. The high pressure rebuilt over the entire state as the month progressed and unseasonably hot temperatures were observed towards the end of the month. Rangeland and dry-land pasture forage conditions, already critically dry, continued to deteriorate. Fire danger was high to extreme.

The month of October was dominated by low pressure systems. Due to these systems, the state saw a significant amount of precipitation and strong winds. Three weeks into the month, rainfall records were noted across central and northern California. Total rainfall amounts varied from 2 to 6 inches in the valley, and 4 to 8 inches in the foothills and higher elevations. Along the coast, rainfall totals were estimated to be 3 to 8 inches. Minor flooding due to heavy rainfall was documented on highways, small streams and creeks. Sustained winds of 25 to 35 mph, with gusts to around 55 mph, were recorded in portions of the Sacramento and Central Valley and along the coast. Gusts over 65 mph were recorded in the higher elevations. Property damage, downed trees and branches were documented. Rainfall interrupted harvest and field preparation in many areas. The wind and rain caused lodging in some rice fields. Rain fell on some stacked alfalfa. Corn plants were pushed over by the wind and rain, but were still harvestable.

High pressure systems were common over most of California during the month of November. Southern California remained dry except for some spotty coastal drizzle. Towards the end of the month, a cold front moved across the northern portion of the state, spreading rain showers across the valley and snow in the northern mountains.

December started with temperatures across the Sacramento and San Joaquin Valleys falling to record levels. Morning lows in the Northern Sacramento Valley fell to the teens. Snowfall across the Sierra Nevada Mountains was impressive, with over 2 feet falling at the higher elevations. Southern California enjoyed sunny and unseasonably warm weather as abundant sunshine warmed the Southland. Wheat, oats, and barley continue to be planted, although field work was slowed due to rain.

1/ Value of agricultural sector production is the gross value of commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

2/ A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales.

1/ Rainfall year is July 1 - June 30.

Source: Western Regional Climate Center, Reno, Nevada

The total value of California field crop production declined to \$3.54 billion, down 29 percent from a record high in 2008, and down 14 percent from 2007. California's acreage and production both decreased. The harvested acreage declined by 13 percent while production was down by 17 percent from 2008.

California continued to lead the nation in alfalfa hay production, despite dry growing conditions and lower prices. In 2009, California produced approximately 6.96 million tons of alfalfa hay, generating \$758 million. Other hay also showed a decline in production and price. Values were also down 48 percent to \$169 million. In total, all hay declined in value by 48 percent for a total value of \$927 million.

Price of Upland cotton was \$0.72 per pound, up 20 percent from 2008; however, tight water supplies and crop conversion lowered planted acreage for the fifth year in a row to 71,000 acres, which was a 41 percent drop from 2008, and 87 percent below 2004. The total value of Upland cotton also decreased from \$105 million in 2008 to \$86 million in 2009, a drop of 18 percent. California growers planted 119,000 acres of American Pima cotton, down 36,000 from 2008. The American Pima cotton price increased to \$1.14 per pound. The rise in price kept total value unchanged for American Pima Cotton from 2008 to 2009, which generated \$192 million for each year.

Rice plantings grew by 8 percent in California, with 561,000 acres planted in 2009. Medium grain rice contributed to 90 percent of the total rice acreage and 91 percent of the total production. Despite an increase in acreage, the total value of rice production declined by 25 percent from the previous year. The 2009 total value for all rice was \$889 million. California corn for grain production was valued at \$125 million for 2009,

which was a 21 percent drop from 2008. The harvested acreage and yield both declined from the previous year. Harvested acreage was down 6 percent to 160,000 acres, while yield was down 8 percent to 5.04 tons per acre.

Fifty-four percent of the California winter wheat crop was harvested for grain. Many growers of wheat and other small grains chose to harvest the crop for hay or silage due to drought conditions. Wheat was planted on 795,000 acres and 500,000 were harvested for grain. Overall, production decreased 12 percent and value dropped 32 percent. While winter wheat production declined by 22 percent, durum wheat production increased by 12 percent. Prices were lower for both winter wheat and durum wheat, priced at \$175.00 per ton and \$200.00 per ton, respectively.

### Notable Increases in Value:

Beans, Dry Edible.....	34%
Oats.....	28%
Potatoes, Spring.....	28%
Potatoes, Sweet.....	19%

### Notable Decreases in Value:

Safflower.....	61%
Barley, All.....	50%
Hay, Alfalfa (Dry).....	48%
Hay, All (Dry).....	48%
Hay, Other (Dry).....	48%
Potatoes, Summer.....	48%

	2009	795,000	500,000	2.60	1,302,000	184.79	240,600

- 1/ Area planted includes preceding fall.
- 2/ Production is on a clean basis.
- 3/ Missing data has not been published due to the estimate being discontinued, not estimated, or not available.
- 4/ Includes varieties not listed separately. Excludes beans grown for garden seed.
- 5/ Planted acreage is for all purposes.
- 6/ Production ginned. Cotton bales are 480 lbs. net-weight.
- 7/ Estimates began in 2005.
- 8/ All alfalfa forage production is the sum of alfalfa harvested as dry hay; and alfalfa haylage and greenchop production after converting it to a dry equivalent basis.
- 9/ All forage production is the sum of the following dry equivalents: alfalfa hay and all other hay harvested as dry hay, alfalfa haylage and greenchop, all other hay haylage and greenchop; after converting alfalfa and all other haylage and greenchop to a dry equivalent basis.
- 10/ Estimated marketings of alfalfa and other hay used as weights to calculate all hay prices.
- 11/ Includes only alfalfa and alfalfa mixtures that were harvested as haylage or greenchop (green weight). Alfalfa harvested as dry hay is not included.
- 12/ Includes all types of forage harvested as haylage or greenchop (green weight). Forage harvested as dry hay and corn and sorghum silage/greenchop are not included.
- 13/ Sweet rice acreage has been included since the 2003 crop year, but not previous years.
- 14/ Excludes wild rice.
- 15/ Estimates began in 2000.
- 16/ Relates to year of intended harvest for fall planted beets in central California and to year of planting for overwintered beets in central and southern California.
- 17/ Preliminary Marketing Year Average Price.

1/ Counties or district data combined to avoid disclosing data for individual farms. All Wheat total production for 2009 is the sum of Durum Wheat and Winter Wheat which add to 1,266,000 tons.

California's 2009 floriculture crop leads the nation at a value of \$922 million wholesale, for operations with \$100,000 or more in sales, but is down 12 percent from the revised 2008 total. California accounts for 25 percent of the total wholesale value of reported crop for the United States. Florida, the next largest producer, was down 9 percent from the prior year, with \$674 million in wholesale value for 2009. The number of producers in California declined from a revised 492 in 2008 to 436 in 2009. In Florida, the number of producers decreased from a revised 528 in 2008 to 475 in 2009. California and Florida together accounted for 43 percent of the 15-state total value of floriculture crops.

California-grown annual bedding and garden plants accounts for almost 16 percent of the total value recorded for this grouping to lead the highest valued crop category in the 15-state program. Wholesale value of California grown bedding and garden plants, produced by all operations with \$100,000 or more in sales, decreased approximately 3 percent from a revised \$217 million in 2008 to approximately \$210 million in 2009. Wholesale value of Michigan crops, the second largest, decreased almost 4 percent to \$180 million. The total wholesale of annual bedding and garden plant crops in the 15-State program slightly increased to \$1.32 billion. The number of annual bedding and garden plant producers in the 15-State program increased more than 1 percent, from 1,779 in 2008 to 1,806, in 2009.

California is the dominant State in cut flower production, accounting for 75 percent of the total cut flower wholesale value among operations surveyed with \$100,000 or more in

total sales. The \$269 million in value for 2009 was down 17 percent from the revised 2008 valuation of \$324 million. Total cut flower wholesale value increased nearly 13 percent for the second largest, Washington state, from a revised \$23.1 million in 2008 to \$26.1 million in 2009. The total wholesale value of cut flower crops in the 15-State program decreased nearly 14 percent, from a revised \$417 million in 2008 to \$359 million, in 2009. The number of cut flower producers in the 15-State program declined slightly, from 364 in 2008 to 362 in 2009.

California also leads the country in potted flowering plant value for 2009 with a total value of \$206 million wholesale produced by operations with \$100,000 or more in total sales, down over 15 percent from the revised 2008 valuation. California accounted for approximately 33 percent of the 15-state total wholesale value reported. Florida, the second largest producer, accounted for 21 percent of the 15-state total with \$131 million wholesale. Potted orchid production continued to lead this category in California with crops valued at \$74.9 million up 16 percent from the revised 2008 wholesale value. Production of potted orchids, potted poinsettias and florist roses together accounted for over 58 percent of the wholesale value of California-grown potted flower plants. The total wholesale value of potted flowering plant crops in the 15-State program decreased over 5 percent from the revised 2008 valuation to \$632 million. The number of potted flowering plant producers in the 15-State program increased slightly from a revised 1,251 in 2008 to 1,259 in 2009.

## Fruit and Nut Crops

California accounts for 46 percent of the U.S. fruit and nut production and 62 percent of the national value of fruit and nut crops. In 2009, the state produced 14.2 million tons of fruit and nuts, 5 percent less than 2008. Grape production totaled 6.54 million tons for 2009, a slight decrease from the 2008 grape crop. The state's total production value of all fruits and nuts in 2009 was \$11.8 billion, up 6 percent from 2008.

Grapes continue to be the top-valued fruit and nut crop at \$3.27 billion, up 12 percent from the previous year. The California grape crop accounts for 90 percent of the 2009 United States utilized grape production. Crops with record production in 2009 were blueberries, raspberries, strawberries, pistachios, and walnuts. California accounted for nearly all the national production of almonds, dates, figs, kiwifruit, olives, Clingstone peaches, pistachios, dried plums, raisins, and walnuts.

### Notable Increases in California Production:

Blueberries .....	73%
Lemons .....	42%
Plums, Dried .....	29%
Pistachios .....	28%
Grapes, Wine .....	23%

### Notable Decreases in California Production:

Avocados .....	47%
Olives .....	31%
Plums .....	30%
Nectarines .....	29%
Oranges, Valencia .....	29%

According to the USDA's Economic Research Service, in 2009 California was the number one exporter of agricultural commodities in the United States. Tree nuts were the number one agricultural export for California, followed by fruit.

The United States is among the top producers and consumers of fruit and tree nuts in the world. Each year, fruit and tree nut production generates about 13 percent of the United States farm cash receipts for all agricultural crops. Over one-tenth of United States fruit and tree nut production is destined for the export market, while imports make up over one-third of domestic fruit and tree nut consumption. The typical American consumes around 280 pounds of fruit and tree nuts (fresh and processed products) each year. Oranges, apples, grapes, and bananas are the most popular fruit while almonds, pecans, and walnuts are the most preferred tree nuts.

The nation's largest fruit producing states are California, Florida and Washington. California accounts for over half of the harvested fruit acreage, Florida over ten percent, and Washington around six percent.

U.S. tree nut production since the mid-2000s generated, on average, nearly \$4 billion in annual farm cash receipts, with almonds, walnuts, pistachios and pecans accounting for most of the sales. California is the nation's number one producer of tree nuts. Almost 90 percent of the U.S. tree nut production is harvested from Golden State orchards annually.

1/ Non-bearing shown only in year when acreage surveys were conducted.

2/ Return at processing plant door or packinghouse door.

3/ Acres of raisin type grapes enrolled in the California Raisin Industry Diversion (RID) program were; 1998-2000 - zero; 2001 - 41,000; 2002 - 27,000; 2003-2007 - zero. These acres were deducted from bearing acres before calculating yield.

4/ Production is the fresh equivalent of dried and not dried.

5/ Acreage by county, variety and year of planting for 2007 are available upon request.

6/ These crops are apricot-plum crosses (aprium, plumcot, pluots), black walnuts, chayotes, cherimoyas, chestnuts, feijoas, guavas, jojobas, jujubes, kumquats, limes, loquats, Macadamia nuts, persimmons, pomegranates, prickly pears, quince, citrus by-products, and orchard biomass.

1/ Missing data not published to avoid possible disclosure of individual operations.

2/ Total processed includes canned, frozen, juice, and brined.

3/ Small quantities processed included in fresh to avoid possible disclosure.

4/ Includes substandard raisins diverted to other uses.

5/ Processed and fresh fruit price not published to avoid possible disclosure, but included in total utilized.

6/ Quantity and value include dried, but price excludes dried.

7/ Processed mostly canned, but includes small quantities dried and other uses not published separately to avoid possible disclosure. Data for 2006 and 2007 not published to avoid possible disclosure.

8/ Processed mostly juice, but includes small quantities canned and other uses not published separately to avoid possible disclosure.

1/ Non-bearing shown only in year when acreage survey conducted.

2/ Values are based on the edible portion of the crop only. Included in production are inedible quantities of no value:

2000 - 15.9 million pounds, 2001 - 16.8 million pounds, 2002 - 8.30 million pounds, 2003 - 20.8 million pounds, 2004 - 14.5 million pounds, 2005 - 16.1 million pounds, 2006 - 23.5 million pounds, 2007 - 17.5 million pounds, 2008 - 14.0 million pounds, 2009 - 20.0 million pounds.

3/ Data for 2008 acreage by county, variety and year of planting available upon request.

## Livestock and Dairy

California's total livestock and livestock products cash receipts were \$7.8 billion in 2009, down 26 percent from 2008. Nearly 85 percent of the change from 2008 was due to the decline in dairy products value. California dropped behind Iowa to rank third nationally, accounting for 6.5 percent of total livestock cash receipts. Dairy products remain the state's leading commodity, despite cash receipts declining for milk by over 34 percent from 2008. Receipts for cattle and calves dropped from the state's 5<sup>th</sup> leading commodity in 2008 to 7<sup>th</sup>.

The Golden State's dairy industry faced a very difficult year with historic low prices, high costs of production and economic conditions making credit availability very tight. Milk production had a net decrease every month in 2009 compared with the same month in 2008. The annual production was 4.1 percent below the prior year, the largest average annual loss in production ever recorded in the state. 1979 was the last year a negative growth in milk production compared to the prior year was recorded. Reduction in production began in 2008 in response to inadequate plant capacity and some cooperatives and other processors initiating production base caps. These caps continued into 2009, and coupled with four Cooperatives Working Together herd retirements and the decline in dairy numbers, drove the decline in production. Additional factors contributing to the slackening production included the movement to cheaper, less protein-rich feed rations in response to high feed costs and some operations limiting herd size to comply with air and water regulations. Prices received by dairy producers had dropped to below cost of production in late 2008 and this disparity continued through third quarter of 2009. Production costs dropped on average by 8 percent from 2008, but the average prices paid to producers for Grade A milk in 2009 decreased nearly 32 percent. Dairies continued to relocate to other states or shut down completely with a net loss of 100 California dairies in 2009. The state's dairy herd declined sixty-two thousand head in 2009.

California has been the nation's leading dairy state since 1993 when it surpassed Wisconsin in milk production. Sales of milk and cream contributed \$4.54 billion in 2009. Wisconsin, New York, Idaho, and Pennsylvania were the next leading states in total milk production. California ranked number one in the U.S. in the production of fluid milk, butter, ice cream, and nonfat dry milk. California was second in total cheese production.

California's dairies produced 39.5 billion pounds of milk, accounting for 21 percent of the nation's milk supply. For the third year in a row, all 12 months of 2009 recorded more than 3.1 billion pounds in milk production. Approximately 40 percent of all the Golden State's milk was used to make cheese, down 2 percent from 2008.

According to the California Department of Food and Agriculture's Dairy Statistics Branch, 33 counties contributed to the state's commercial milk production. The top five milk-

producing counties in California accounting for 71 percent of the state's total milk production were Tulare (27 percent), Merced (14 percent), Kings (10 percent), Kern (9 percent), and Stanislaus (10 percent). Sales of fluid milk in California averaged 31 percent whole milk, 36 percent reduced fat milk, 15 percent low fat milk, and 15 percent skim milk.

Milk production per cow decreased 1.5 percent to 22,000 pounds. California's total cheese production of 2.06 billion pounds was down nearly 3 percent from 2008. United States cheese exports declined 17 percent from 2008 to 108 thousand metric tons per the USDA Foreign Agricultural Service. Butter exports also decreased by 68 percent. Softening demand, fallout from the worldwide recession and credit crisis, and aggressive Oceania pricing, bumped U.S. suppliers out of the world market when prices fell below U.S. support levels. Dairy product export sales were down 40 percent from 2008's record level, but most of the downturn reflected lower world prices as overall U.S. dairy product export volume was up 10 percent.

Cash receipts for cattle and calves decreased 11 percent from 2008. Sales totaled \$1.68 billion, compared with \$1.88 billion in 2008. Receipts for hogs and pigs were 25 percent off the previous year. Sheep and lambs increased 19 percent from 2008, recovering from a three year downward trend in cash receipts. Aquaculture receipts were up 22 percent from 2008.

California's 2009 honey production, at 11.7 million pounds, was 36 percent below 2008 and 14 percent below 2007. Producing colonies totaled 355 thousand, down 1 percent from the previous year. The yield per colony averaged 33 pounds, compared to 51 pounds produced in 2008. The average price per pound was 139 cents per pound, the same as 2008.

California Livestock, Dairy, Poultry, and Apiary Cash Income, 2008-2009

Egg producers continued to be concerned about the unknown impacts of the 2008 Prevention of Farm Animal Cruelty Act. With specific space standards yet to be defined, some producers moved to states with less regulation.

1/ An operation is any place having one or more head of cattle on hand at any time during the year. Percent of inventory reflect average distributions of various probability surveys conducted during the year, but are based primarily on beginning-of-year and mid-year surveys.

2/ After 2007, data will only be published from the Census of Agriculture which is conducted in five-year intervals.

1/ Steers and heifers over 500 pounds (including fed cattle) and slaughter cows.

2/ Steers and heifers (all qualities) over 500 pounds (including fed cattle).

3/ Beef cows and cull dairy cows sold for slaughter.

4/ Steers and heifers (all qualities) under 500 pounds

### Grazing Fee Annual Average Rates, 2000-2009 1/

Year	Per Animal Unit 2/	Cow-Calf	Per Head
	<i>Dollars Per Month</i>		
2000	12.30	15.50	12.70
2001	13.00	16.00	13.50
2002	12.80	16.50	14.00
2003	13.50	17.50	14.30
2004	14.50	19.50	15.50
2005	15.40	20.50	17.00
2006	16.50	21.00	17.00
2007	16.50	21.50	17.30
2008	17.80	22.10	18.50
2009	16.70	21.00	17.50

1/ The average rates are estimates based on survey indications of monthly lease rates for private, non-irrigated grazing land from the January Cattle Survey.

2/ Includes animal unit plus cow-calf rates. Cow-calf rate converted to animal unit (AUM) using (1 aum=cow-calf \*0.833).

### Milk Cows, Milk Production and Value, 2000-2009

Year	Milk Cows		Production Per Milk Cow		Production		Value	Total
	January 1 1,000 Head	Annual Average 1,000 Head	Milk Pounds	Milk Fat Pounds	Milk Million Pounds	Milk Fat Million Pounds	Per Unit \$/Cwt.	Value 1/ \$1,000

## Vegetables and Melons

California continued as the leading fresh market vegetable producing state in 2009, accounting for 44 percent of the U.S. harvested area, 49 percent of the national production, and 52 percent of the value, for the 24 selected vegetables and melons estimated.

Fresh market production increased for snap beans, sweet corn, head and Romaine lettuce, cantaloupe, honeydew, watermelon, mushrooms, summer storage onions, chili peppers, spinach and squash. Fresh vegetable crops with decreased production included artichokes, broccoli, carrots, cucumbers, leaf lettuce, bell peppers and tomatoes.

California also led the nation in processing vegetable production during 2009, with 27 percent of the U.S. harvested acreage, 69 percent of the national production and 57 percent of the total value, for the eight processed vegetables estimated.

The total value of California's 2009 fresh and processing vegetable and melon production was \$7.78 billion, down from 2008's revised total of \$8.08 billion. Lettuce remained the leading vegetable crop in value of production, at \$1.73 billion, followed by tomatoes with \$1.29 billion.

Vegetable crops that had value increases were artichokes, snap beans, broccoli, processing carrots, cauliflower, sweet corn, garlic, head, leaf and Romaine lettuce, honeydew melons, agaricus mushrooms, summer storage onions, chili peppers, pumpkins, processing tomatoes and fresh spinach. Crops that had decreased value included asparagus, cabbage, fresh carrots, celery, cucumbers, cantaloupe, watermelon, spring and summer non-storage onions, bell peppers, processing spinach, squash and fresh market tomatoes.

California's cash receipts for vegetables ranked number one in the nation and accounted for 48.3 percent of the U.S. total. Valued at \$7.85 billion, vegetables represented 22.5 percent of the state's total cash income from agriculture in 2009.

According to the USDA Economic Research Service, per capita use of vegetables, melons, potatoes, sweet potatoes, pulse crops and mushrooms in the United States decreased 0.4 percent from 447 pounds in 2008 to 445 pounds in 2009.

Fresh market consumption per capita in 2009 was 168 pounds, 1 percent lower than in 2008. Utilization increased for asparagus, broccoli, cucumbers, eggplant, lettuce, spinach, squash, tomatoes and cantaloupe. Declining utilization was observed for snap beans, cabbage, carrots, cauliflower, celery, sweet corn, garlic, onions, bell peppers, pumpkins, watermelon and honeydew.

Per capita consumption of U.S. processing vegetables increased 5 percent from 115 pounds in 2008 to 121 pounds in 2009. Processing vegetables whose utilization increased in 2009 included snap beans, sweet corn, cucumbers, tomatoes, chili peppers, and dehydrator onions. Consumption decreased for processing spinach.

### Notable Increases in Production:

Romaine Lettuce.....	16%
Fresh Market Snap Beans.....	14%
Fresh Market Sweet Corn.....	13%
Processing Tomatoes.....	13%
Chili Peppers.....	12%

### Notable Decreases in Production:

Summer Non-Storage Onions.....	16%
Spring Onions.....	14%
Fresh Market Cucumbers.....	14%
Leaf Lettuce.....	10%
Fresh Market Tomatoes.....	10%

- 1/ The processed price is based on equivalent returns at the processing plant door. The fresh market price is at the point of first sale.
- 2/ Includes both fresh marketing and processing vegetables.
- 3/ Estimates discontinued in 2002.
- 4/ Estimates began in 2000 and discontinued in 2002.
- 5/ Includes fresh and processed. Production includes quantity harvested, but not marketed because of loss during storage (shrinkage): 2000 to 2009 -- 250,000 cwt. Storage loss amounts are excluded when computing total value. Includes some quantities not marketed and excluded in computing value.
- 6/ Estimates began in 2000.
- 7/ Included in summer storage onions.
- 8/ Estimates began in 1929, but were reinitiated in 2000 after being discontinued for nine years.
- 9/ Estimates began in 2002.
- 10/ Miscellaneous vegetables and melons include: Green lima beans for processing, oriental vegetables, green peas, etc. The crops added in 2000 and discontinued in 2002 are excluded from the 2000 and 2001 miscellaneous totals.
