## Agricultural Overview

California agriculture experienced a 9 percent increase in the sales value of its products for 2010. The state's 81,700 farms and ranches received a record \$37.5 billion for their output last year, up from the \$34.6 billion reached during 2009. The \$37.5 billion was 1 percent higher than the previous record set in 2008.

California's increase in revenue was led by the dairy sector. Dairy producers received \$5.93 billion for their milk production in 2010, up 31 percent from 2009, but down 14 percent from 2008. Herd size decreased 2 percent from 2009. Milk production from the state's dairy farms increased 2 percent. Milk prices received by producers rose from \$11.49 per hundred pounds of milk sold in 2009 to \$14.69 in 2010. California produced 20.9 percent of the nation's milk supply last year. The beginning of 2010 saw a dip in milk price for January, February and March. Milk prices began a slow recovery from April through October, before slipping in November and December. The higher price of milk was often offset by higher feed costs, which resulted in California dairies struggling to turn a profit in 2010.

California remained the number one state in cash farm receipts in 2010, with its \$37.5 billion in revenue representing 11.9 percent of the U.S. total. The state accounted for 16.0 percent of national receipts for crops, and 7.0 percent of the U.S. revenue for livestock and livestock products.

California's agricultural abundance includes more than 400 commodities. The state produces nearly half of U.S.-grown fruits, nuts, and vegetables. Across the nation, U.S. consumers regularly purchase several crops produced solely in California.

### Top 5 Agricultural States in Cash Receipts, 2010

State	Rank	Total Value Billion Dollars
California	1	37.5
Iowa	2	23.2
Texas	3	19.9
Nebraska	4	17.3
Minnesota	5	15.1

### Notable Increases in California Cash Receipts:

Olives .....	252%
Honey .....	163%
Pecans .....	145%
Pistachios .....	95%
Avocados .....	93%
Christmas Trees .....	83%
Wool .....	67%
Sheep and lambs .....	66%
Mohair .....	52%
Hogs .....	46%

### Notable Decreases in California Cash Receipts:

Mandarins & Mandarin Hybrids .....	-55%
Safflower .....	-53%
Raspberries .....	-44%
Apples .....	-36%
Grapefruit .....	-30%
Figs .....	-27%
Cauliflower .....	-26%
Wheat .....	-25%
Corn, sweet .....	-24%
Artichokes .....	-23%

### Crop and Livestock Commodities in which California Leads the Nation 1/

<b>Almonds</b>	Escarole/Endive	Limes	Pigeons and Squabs
Apricots	<b>Figs</b>	Mandarins & Mandarin Hybrids 2/	<b>Pistachios</b>
<b>Artichokes</b>	Flowers, Bulbs	Melons, Cantaloupe	Plums
Asparagus	Flowers, Cut	Melons, Honeydew	<b>Plums, Dried</b>
Avocados	Flowers, Potted Plants	Milk	Pluots
Beans, Dry Lima	Garlic	Milk Goats	<b>Pomegranates</b>
Bedding/Garden Plants	<b>Grapes, Raisins</b>	Nectarines	Raspberries
Broccoli	Grapes, Table	Nursery, Bedding Plants	<b>Rice, Sweet</b>
Brussels Sprouts	Grapes, Wine	Nursery Crops	Safflower
Cabbage, Chinese	Greens, Mustard	<b>Olives</b>	Seed, Alfalfa
Cabbage, F.M.	Hay, Alfalfa	Onions, Dry	Seed, Bermuda Grass
Carrots	Herbs	Onions, Green	<b>Seed, Ladino Clover</b>
Cauliflower	Kale	Parsley	Seed, Vegetable and Flower
Celery	<b>Kiwifruit</b>	<b>Peaches, Clingstone</b>	Spinach
Chicory	Kumquats	Peaches, Freestone	Strawberries
Cotton, American Pima	Lemons	Pears, Bartlett	Tomatoes, Processing
Daikon	Lettuce, Head	Peppers, Chile	Vegetables, Greenhouse
<b>Dates</b>	Lettuce, Leaf	Peppers, Bell	Vegetables, Oriental
Eggplant	Lettuce, Romaine	Persimmons	<b>Walnuts</b>
			Wild Rice

1/ California is the sole producer (99 percent or more) of the commodities in **bold**.

2/ Includes tangelos, tangerines and tangors.

## Farm Facts

In 2010, 81,700 farms operated in California, 3.7 percent of the national total. Over 23 percent of California farms produced commodity sales totaling over \$100,000, compared to 17 percent for the U.S. as a whole. During 2010, California lands devoted to farming and ranching totaled 25.4 million acres, unchanged from 2009. The California average farm size was 311 acres, while the U.S. average farm size was 418 acres.

## Land Values/Cash Rents

In 2010, the average value of California farm real estate increased \$100 per acre to \$6,700 per acre. Irrigated cropland valued at \$11,100 per acre decreased 4 percent, while non-irrigated cropland valued at \$3,500 per acre increased 3 percent. All cropland was valued at \$9,130 per acre and decreased \$350 per acre from 2009. Pastureland was valued at \$2,850 per acre for 2010, down 2 percent from the previous year.

Irrigated cropland rental rates were valued at \$345 per acre, a decrease of \$5 per acre from the previous year. Similarly, non-irrigated land rental rates decreased 11 percent to \$50 per acre. Pastureland rental rates, valued at an average of \$13 per acre, decreased 7 percent from the previous year.

## Top Commodities

California's top 20 crop and livestock commodities accounted for more than \$30.4 billion in value for 2010. Eleven commodities exceeded \$1 billion in value for 2010. Fourteen of the 20 commodities registered an increase in value from the previous year. The three largest nut crops in California all saw record production in 2010. The value of both pistachios and walnuts exceeded \$1 billion for the first time, while almonds increased to California's third most valuable crop. Final grower returns could change the sales values for the commodities, resulting in an updated dollar amount in next year's report.

Top 20 Commodities for 2008-2010						
Commodity	Value and Rank					
	2008		2009		2010	
	<i>\$1,000</i>

## Weather Highlights for 2010

January started with a series of Pacific storm systems moving through California bringing rainfall to most of the state. Well into the month, these systems were followed by a high pressure ridge, producing stagnant atmospheric conditions across the Central Valley, which in turn resulted in widespread fog trapped under a strong inversion. The end of January was more dramatic; Pacific storm systems pushed into the state on a consistent basis. Southern California experienced localized flooding and mudslides, while most of the northern and central portions of the state were able to handle the rains without major problems. California snowpack increased markedly across the high mountain areas, especially the Sierra Nevada and southern Cascades. Associated with these storm patterns were strong winds that developed across mainly northern areas. Wind gusts for some of the coastal areas, Delta and Sacramento Valley, exceeded 60 mph with some downed trees.

Early February was marked with a series of storm systems traversing the state, mostly affecting Northern California, and spreading light to moderate amounts of precipitation to the valleys and mountains. The remainder of the month saw a series of high pressure ridges setting over the West Coast, resulting in a dry and mild weather regime for most of California. Temperatures across Northern California were close to seasonal norms, while Southern California saw above normal temperatures with daytime highs reaching 80 degrees. Rains continued to promote greening and range conditions in the Central Valley, and the foothills showed marked improvement.

The first half of March was no different than the end of February with low pressures and storm systems bringing cooler temperatures and precipitation to the northwest. The second half of March into April was highlighted with unpredictable weather. First, high pressure ridges brought dry and mild conditions causing spring-like weather, with high temperatures reaching the 80s in some portions of the North, and the 90s in Southern California. Then, low pressure systems brought rain to the northern half of California, along with below normal temperatures throughout the state.

May started with late season storms bringing cooler temperatures, valley rain showers, and isolated thunderstorms to northern California. These systems prompted temperatures to drop 20 degrees below normal at times as it also brought significant amounts of snow to the northern mountains, west slopes of the Sierra Nevada and Tulare County Mountains. The month of May also saw high pressure ridges causing temperatures to increase to above normal levels. This alternating pattern persisted throughout the month of June when some triple digits temperatures were recorded. Winter wheat harvest started in Southern California while non-irrigated ranges received precipitation and continued to flourish.

The month of July started with temperatures above normal in the inland valleys as periodic marine influences would lightly drop coastal temperatures. Throughout the month, the state would experience high pressure ridges that would carry temperatures well above normal; 125 degrees was observed in Death Valley.

Although low pressures, thunder storms, light sprinkles, and sporadic below normal temperatures were observed mainly over the Sierra Nevada Mountains and northern parts of the state throughout the month of August, warmer than normal temperatures dominated the month. There was shaking and harvesting of Nonpareil almond trees in the Sacramento and San Joaquin Valleys, as hull splitting continued and final hull split sprays were applied on later varieties.

The month of September started off with strong high pressure over the state. The valley and mountain daytime high temperatures were near normal for early September. The exception was along the coast. The San Francisco Bay Area was in the 90s, well above normal for the coast. Heat warnings were issued for most coastal regions. A rare fall-like cold front entered the Golden State in mid-September, bringing rain to the state from Sacramento northward. Butte County received half an inch to an inch and a half of rain due to thunderstorms in the area, causing minor flooding in the town of Chico. High pressure rebuilt over Southern California towards the end of the month, starting a warming trend which ushered in the beginning of autumn. Rice harvest started in early-planted fields in the San Joaquin Valley.

October started with a strong high pressure system moving over California bringing hot and dry conditions to most of the state, especially to Southern California, where record breaking heat was reported. Then cool and unsettled conditions off southern California brought early season rainfall to the Southland as monsoonal moisture circulating around the low pressure system also brought locally significant rainfall amounts to the greater Sierra Nevada range. This rollercoaster of high and low pressures continued throughout October. At times heavy rains would bring the walnut harvest to a halt. The last of the almond harvest was completed in Kern County and the San Joaquin Valley.

The first half of November was mild and dry in California with high pressures building over the West Coast. Then, the weather was dominated by two major low pressure systems. The first system pushed through from the Gulf of Alaska bringing widespread rain across the valleys and heavy snow in the mountains. The second was a cold and dry air mass originating from Western Canada. This cold air brought enough instability to generate a few scattered thunderstorms to the Sierra Nevada Mountains. One storm traversed Eastern Sacramento and Western El Dorado County, dropping pea-sized hail and generating an EF1 tornado with winds estimated above 100 miles per hour. The dominating feature was record and near record cold temperatures that blanketed the entire state. Freeze warnings were in effect for most of Northern California. Low temperature records were set for multiple days in a row from far northern coastal California at Crescent City to Southern California and locations inland.

December was dominated by low pressure systems passing through with strong winds, significant amounts of rain throughout the state, and much snow to the Mountains. Southern California in particular was hard hit by this system, with widespread flooding and rock and mudslides reported, along with small stream and urban flooding. Occasional high pressure systems moderated temperatures at times.

## Cash Income by Commodity Groups, 2008-2010

1/ Value of agricultural sector production is the gross value of commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

2/ A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales.

(D) Withheld to avoid disclosing data for individual operations.

1/ Based on quantity produced for crops and on quantity marketed for livestock and poultry products.

2/ Based on value of quantity harvested for crops, value of quantity marketed for livestock, and value of quantity produced for poultry products.

3/ Based on total value.

4/ Based on values published in the county agricultural commissioners' annual crop reports. 2009 crop year data used when 2010 not available.

5/ Share of U.S. production based on 2007 Census of Agriculture.

6/ Includes sunflower, safflower, and canola.

7/ Includes trees, shrubs, vines, bulbs, turf, etc., not included in flowers and foliage category.

8/ Includes cut flowers, potted plants, foliage plants, bedding plants, and indoor decoratives.

9/ From Economic Research Service cash receipts data.

1/ Rainfall year is July 1 - June 30.

Source: Western Regional Climate Center, Reno, Nevada for 2009-2010, and Agricultural Weather Information Service, Inc. for 2010-2011

The total value of California field crop production increased to \$3.84 billion, up 3 percent from 2009, and down 23 percent from the record high reached in 2008. While cotton may no longer be “King,” 2010 proved it can still have a large impact on California’s field crop totals. In what otherwise would have been a down year for total field crop value, the 113 percent increase in cotton value led to the increase in total field crop value.

Cotton saw a rebound in 2010, with acreage, production and value all increasing. The price of Upland cotton was \$1.05 per pound, up 46 percent from 2009. An increase in water availability, along with higher prices, led to Upland acreage increasing for the first time since 2004. The total value of Upland cotton increased from \$83 million in 2009 to \$212 million in 2010, an increase of 155 percent. California growers planted 182,000 acres of American Pima cotton, up 63,000 from 2009. The American Pima cotton price increased to \$1.82 per pound. The rise in price and production almost doubled the value for American Pima Cotton from \$203 million in 2009 to \$398 million in 2010.

California continued to lead the nation in alfalfa hay production, producing over 9 percent of the nation’s total alfalfa hay. In 2010, California produced approximately 6.26 million tons of alfalfa hay, valued at \$782 million. Production of hay other than alfalfa increased 5 percent, while its total value increased 6 percent. Total hay production declined 7 percent from 2009, while higher prices increased hay’s value 5 percent.

Rice plantings decreased by less than one percent, with 558,000 acres planted in 2010. Medium grain rice contributed to 91 percent of the total rice acreage and 93 percent of the total production. The total value of rice production was \$789 million, a decline of 16 percent from the previous year.

California corn for grain production was valued at \$182 million for 2010, which was a 48 percent increase from 2009. Harvested acreage, yield and price all increased from the previous year. Harvested acreage increased 13 percent to 180,000 acres; yield increased 8 percent and price increased by 21 percent. Harvested acres of corn silage increased by 10 percent to 425,000 acres. Production of corn silage increased to 11 million tons, up 13 percent from 2009.

Fifty-five percent of the California winter wheat crop was harvested for grain in 2010. Wheat was planted on 765,000 acres and 455,000 were harvested for grain. Overall, production decreased 10 percent and value dropped 9 percent. The production of winter wheat increased by 9 percent from 2009 and Durum wheat production decreased by 39 percent from 2009. While the value of winter wheat production increased 6 percent to \$154 million, the value of Durum wheat production declined 29 percent to \$72 million.

### Notable Increases in Value:

Cotton Lint, All .....	113%
Barley .....	49%
Corn for Grain .....	48%
Cottonseed .....	22%

### Notable Decreases in Value:

Wheat, Durum .....	29%
Oats.....	19%
Rice, All.....	16%
Beans, Dry Edible.....	16%

2010	765,000	455,000	2.59	1,177,500	173.67	226,268	

1/ Area planted includes preceding fall.

2/ Production is on a clean basis.

3/ Missing data has not been published due to the estimate being discontinued, not estimated, or not available.

4/ Includes varieties not listed separately. Excludes beans grown for garden seed.

5/ Planted acreage is for all purposes.

6/ Production ginned. Cotton bales are 480 lbs. net-weight.

7/ Estimates began in 2005.

8/ All alfalfa forage production is the sum of alfalfa harvested as dry hay; and alfalfa haylage and greenchop production after converting it to a dry equivalent basis.

9/ All forage production is the sum of the following dry equivalents: alfalfa hay and all other hay harvested as dry hay, alfalfa haylage and greenchop, all other hay haylage and greenchop; after converting alfalfa and all other haylage and greenchop to a dry equivalent basis.

10/ Estimated marketings of alfalfa and other hay used as weights to calculate all hay prices.

11/ Includes only alfalfa and alfalfa mixtures that were harvested as haylage or greenchop (green weight). Alfalfa harvested as dry hay is not included.

12/ Includes all types of forage harvested as haylage or greenchop (green weight). Forage harvested as dry hay and corn and sorghum silage/greenchop are not included.

13/ Sweet rice acreage has been included since the 2003 crop year, but not previous years.

14/ Excludes wild rice.

15/ Estimates began in 2000.

16/ Relates to year of intended harvest for fall planted beets in central California and to year of planting for overwintered beets in central and southern California.

17/ Preliminary Marketing Year Average Price.

18/ Value derived from previous County Agricultural Commissioner data.

19/ Beginning in 2010, winter and summer estimates included in spring total.

## Floriculture

California's floriculture crop leads the nation with a value of \$999 million in sales for operations with over \$100,000 in sales, comprising 25.1 percent of the U.S. total wholesale value. Sales increased 8 percent from the 2009 total, in spite of a decrease in the number of California producers from 437 in 2009 to 408 in 2010.

California accounts for almost 15.6 percent of the total value of annual bedding and garden plants, the highest-valued crop category in the 15-state program. The wholesale value of California-grown bedding and garden plants increased just over 15 percent from \$260 million in 2009 to \$299 million in 2010.

California also leads the nation in potted flowering plant value for 2010, with a total value of \$244 million wholesale, up over 17 percent from the 2009 valuation. California accounts for nearly 36.5 percent of the 15-state total wholesale value reported.

California is the dominant State in cut flower production, accounting for about 76.3 percent of the total cut flower wholesale value. The \$286 million in value for 2010 is up 6 percent from the 2009 valuation of \$271 million.

(D) Withheld to avoid disclosure of individual operations.

1/ The total covered growing area of 130,288,000 square feet consisted of the following: 30,013,000 square feet of shade and temporary cover; 13,560,000 square feet of glass; 33,752,000 square feet of fiberglass and other rigid greenhouses; 52,963,000 square feet of film plastic (single/multi) greenhouses; and 9,241 acres of open ground.

2/ Pot price is a weighted average of all pots.

3/ Included in state totals to avoid disclosure of individual operations.

## Fruit and Nut Crops

California accounts for 63 percent of the U.S. non-citrus fruit and nut production and 67 percent of the national value. Of the citrus crops, California accounts for 32 percent of the U.S. citrus production and 45 percent of the national value. In total, the state produced 16.2 million tons of fruit and nuts, 52 percent of the national total, up 7 percent from 2009. The state's total production value of all fruits and nuts in 2010 was \$13.3 billion, up 12 percent from 2009.

Grapes continue to be the top-valued fruit and nut crop at \$3.2 billion, down 2 percent from the previous year. The California grape crop accounted for over 90 percent of the 2010 United States utilized grape production. Crops with record production in 2010 were almonds, walnuts, pistachios, pecans, sweet cherries, table grapes, olives, blueberries, strawberries, and tangerines. California accounted for nearly all the national production of almonds, dates, figs, kiwifruit, olives, Clingstone peaches, pistachios, dried plums, raisins, and walnuts.

According to the USDA's Economic Research Service, in 2010 California was the number one exporter of agricultural commodities in the United States. Tree nuts were the number one agricultural export for California, followed by fruit and vegetables.

The United States is among the top producers and consumers of fruit and tree nuts in the world. Each year, fruit and tree nut production generates about 13 percent of the U.S. farm cash receipts for all agricultural crops. More than 20 percent of U.S. fruit and tree nut production is destined for the export market, while imports make up over one-third of domestic fruit and tree nut consumption.

The typical American consumes around 270 pounds of fruit and tree nuts (fresh and processed products) each year. Oranges, grapes, apples, and bananas are the most popular fruit while almonds, walnuts, and pecans are the most preferred tree nuts.

The nation's largest fruit producing states are California, Florida and Washington. California accounts for over half of the harvested fruit acreage, Florida over ten percent, and Washington around eight percent.

U.S. tree nut production since the mid-2000s generated, on average, nearly \$4 billion in annual farm cash receipts, with almonds, walnuts, pistachios and pecans accounting for most of the sales. California is the nation's number one producer of tree nuts. Nearly 92 percent of the U.S. tree nut production was harvested from Golden State orchards in 2010.

### Notable Increases in California Production:

Olives.....	321%
Avocados.....	212%
Pistachios.....	47%
Pecans.....	45%
Tangerines.....	40%
Kiwifruit.....	28%
Plums.....	26%

### Notable Decreases in California Production:

Plums, Dried.....	23%
Bartlett Pears.....	15%
Other Pears.....	9%
Figs.....	8%
Clingstone Peaches.....	8%

1/ Non-bearing shown only in year when acreage surveys were conducted.

2/ Return at processing plant door or packinghouse door.

3/ Acres of raisin type grapes enrolled in the California Raisin Industry Diversion (RID) program were; 1998-2000 - zero; 2001 - 41,000; 2002 - 27,000; 2003-2010 - zero. These acres were deducted from bearing acres before calculating yield.

4/ Production is the fresh equivalent of dried and not dried.

5/ Acreage by county, variety and year of planting for 2007 are available upon request.

6/ These crops are apricot-plum crosses (aprium, plumcot, pluots), black walnuts, chayotes, cherimoyas, chestnuts, feijoas, guavas, jojobas, jujubes, kumquats, limes, loquats, Macadamia nuts, persimmons, pomegranates, prickly pears, quince, citrus by-products, and orchard biomass.

1/ Missing data not published to avoid possible disclosure of individual operations.

2/ Total processed includes canned, frozen, juice, and brined.

3/ Small quantities processed included in fresh to avoid possible disclosure.

4/ Includes substandard raisins diverted to other uses.

5/ Processed and fresh fruit price not published to avoid possible disclosure, but included in total utilized.

6/ Quantity and value include dried, but price excludes dried.

7/ Processed mostly canned, but includes small quantities dried and other uses not published separately to avoid possible disclosure. Data for 2006 and 2007 not published to avoid possible disclosure.

8/ Processed mostly juice, but includes small quantities canned and other uses not published separately to avoid possible disclosure.

1/ Non-bearing shown only in year when acreage survey conducted.

2/ Values are based on the edible portion of the crop only. Included in production are inedible quantities of no value:

2000 - 15.9 million pounds, 2001 - 16.8 million pounds, 2002 - 8.30 million pounds, 2003 - 20.8 million pounds, 2004 - 14.5 million pounds, 2005 - 16.1 million pounds, 2006 - 23.5 million pounds, 2007 - 17.5 million pounds, 2008 - 14.0 million pounds, 2009 - 20.0 million pounds.

3/ Data for 2008 acreage by county, variety and year of planting available upon request.

## Livestock and Dairy

California's total livestock and livestock products cash receipts were \$9.8 billion in 2010, up over 25 percent from 2009. Over 70 percent of the change from 2009 was due to the increase in dairy products value. California ranked third nationally, behind Texas and Iowa, accounting for 7 percent of total US livestock cash receipts. Dairy products remained the state's leading commodity and accounted for 18.9 percent of receipts for US dairy products. Receipts for cattle and calves bounced back from the state's 7<sup>th</sup> leading commodity in 2009 to 5<sup>th</sup>, as it was in 2008 and 2007.

The Golden State's dairy industry continued to cope with the issues that plagued 2009, i.e., low prices received, high costs of production and economic conditions making credit availability very tight. There was some recovery in prices paid to producers, global prices and demand, and US dairy exports for 2010. Production costs decreased slightly from 2009 improving margins for producers. The primary production expense behind the recovery was the decline in total feed costs from 2009. As feed prices for rolled corn and alfalfa hay increased in the fourth quarter of 2010, some producers changed rations to include more cost effective feeds, including feed by-products such as tomatoes, wet distiller grains, wet corn gluten, pomegranates and carrots. Oat, wheat, and Sudan hay were also used in small amounts in the rations of some milk cows. Net milk production decreased for the first four months of the year compared with the same months in 2009, but increases over the remainder of 2010 resulted in a 2.2 percent gain in production from the previous year. The number of dairy cows decreased slightly to 1.75 million, 2.3% below the 2009 annual average. Milk production per cow increased to 23,025 pounds per year, 4.7% above the prior year average. Dairies continued to relocate to other states or shut down completely with a net loss of 37 California dairies in 2010, fewer than the 100 dairy drop in the previous year. The state's average annual dairy herd declined forty-two thousand head in 2010. Cooperatives Working Together (CWT) implemented its 10<sup>th</sup> and final herd retirement in the summer of 2010, removing 31,159 cows from the US milking herd, of which nearly 27 percent were from western states.

California has been the nation's leading dairy state since 1993 when it surpassed Wisconsin in milk production. Sales of milk and cream contributed \$5.94 billion in 2010. Wisconsin, New York, Pennsylvania and Idaho were the next leading states in total milk production. These top five dairy states accounted for over 51% of the total US dairy receipts. California ranked number one in the U.S. in the production of fluid milk, butter and nonfat dry milk. California was second in total cheese production behind Wisconsin, though the difference in production between these two states declined by nearly five percent from 2009.

California's dairies produced 40.4 billion pounds of milk, accounting for 21 percent of the nation's milk supply. For the fourth year in a row, all 12 months of 2010 recorded more than 3.1 billion pounds in milk production. Milk utilization changed track from recent years with butter and nonfat dry milk powder production slightly decreasing their percentage of utilization. California milk going into cheese production increased to 41% from 40.2% in 2009. Mozzarella, which accounts for over 57 percent of California cheese production, was responsible for most of the increase in cheese production in 2010.

According to the California Department of Food and Agriculture's Dairy Statistics Branch, 33 counties contributed to the state's commercial milk production. The top five milk-producing counties

in California accounting for 71 percent of the state's total milk production were Tulare (27 percent), Merced (15 percent), Kings (10 percent), Stanislaus (10 percent) and Kern (9 percent). Sales of fluid milk in California averaged 30 percent whole milk, 38 percent reduced fat milk, 15 percent low fat milk, and 15 percent skim milk.

Milk production per cow increased 4.7 percent to 23,025 pounds. California's total cheese production of 2.2 billion pounds was up nearly 7 percent from 2009. United States cheese exports increased 60 percent from 2009 to 173 thousand metric tons per the USDA Foreign Agricultural Service (FAS). Butter exports also increased by nearly 95 percent to 56 thousand metric tons. Nonfat dry milk powder exports increased by 55 percent to 383.9 thousand metric tons. Poor weather in New Zealand and Australia reduced dairy inventories and allowed U.S. suppliers to take advantage of the burgeoning Asian market demand for dairy products and the regions' precocious recovery from the 2008 global economic downturn. According to FAS the US nonfat dry milk exports to China increased nearly 250 percent from the prior year and were similar to pre-downturn levels. Total US dairy exports to Southeast Asia were up 141 percent over 2009. This contributed to the 3.71 billion dollars of US dairy exports, up 1.4 billion dollars from 2009.

California cash receipts for cattle and calves increased 25 percent from 2009. Sales totaled \$2.09 billion, compared with \$1.68 billion in 2009. Receipts for hogs and pigs were up 46 percent from the previous year. Sheep and lambs increased 66 percent from 2009, continuing the recovery begun in 2009, from a three year downward trend in cash receipts. Aquaculture receipts were up 11 percent from 2009.

California's 2010 honey production, at 27.5 million pounds, was 234 percent of 2009. Producing colonies totaled 410 thousand, up 15 percent from the previous year. The yield per colony averaged 67 pounds, compared to 33 pounds produced in 2009 and 51 pounds in 2008. The average price per pound was 156 cents per pound, while the price was 139 cents in 2009 and 2008. Record high prices for honey pushed cash receipts for honey up 163 percent from 2009's total.

Though no clear guidelines were specified in the 2008 Prevention of Farm Animal Cruelty Act passed by state voters, some egg producers have constructed cage free enclosures in anticipation of the 2015 implementation. 2010 did not see a significant decline in egg production from the prior year.

1/ Steers and heifers over 500 pounds (including fed cattle) and slaughter cows.

2/ Steers and heifers (all qualities) over 500 pounds (including fed cattle).

3/ Beef cows and cull dairy cows sold for slaughter.

4/ Steers and heifers (all qualities) under 500 pounds

### Grazing Fee Annual Average Rates, 2000-2010 1/

Year	Per Animal Unit 2/	Cow-Calf	Per Head
	Dollars Per Month		
2000	12.30	15.50	12.70
2001	13.00	16.00	13.50
2002	12.80	16.50	14.00
2003	13.50	17.50	14.30
2004	14.50	19.50	15.50
2005	15.40	20.50	17.00
2006	16.50	21.00	17.00
2007	16.50	21.50	17.30
2008	17.80	22.10	18.50
2009	16.70	21.00	17.50
2010	16.40	20.50	17.00

1/ The average rates are estimates based on survey indications of monthly lease rates for private, non-irrigated grazing land from the January Cattle Survey.

2/ Includes animal unit plus cow-calf rates. Cow-calf rate converted to animal unit (AUM) using (1 aum=cow-calf \*0.833).

### Milk Cows, Milk Production and Value, 2000-2010

Year	Milk Cows		Production Per Milk Cow		Production		Value	Total
	January 1 1,000 Head	Annual Average 1,000 Head	Milk Pounds	Milk Fat Pounds	Milk Million Pounds	Milk Fat Million Pounds	Per Unit \$/Cwt.	Value 1/ \$1,000

1/ An operation is any place having one or more head of milk cows, excluding cows used to nurse calves, on hand at any time during the year.

Percent of inventory reflects average distributions of various surveys conducted during the year.

2/ After 2007, data will only be published from the Census of Agriculture, which is conducted in five-year intervals. The next data available will be for the 2012 crop year.

## Vegetables and Melons

California continued as the leading fresh market vegetable producing state in 2010, accounting for 43 percent of the U.S. harvested area, 49 percent of the national production, and 48 percent of the value, for the 24 selected vegetables and melons estimated.

Fresh market production increased for celery, cucumbers, Romaine lettuce, spring onions, chili peppers, pumpkins, fresh tomatoes, watermelon and asparagus. Fresh vegetable crops with decreased production included artichokes, snap beans, cabbage, cantaloupes, carrots, sweet corn, garlic, honeydew, head and leaf lettuce, summer storage and non storage onions, bell peppers, spinach, squash, broccoli and cauliflower.

California also led the nation in processing vegetable production during 2010, with 26 percent of the U.S. harvested acreage, 71 percent of the national production and 56 percent of the total value, for the eight processed vegetables estimated.

The total value of California's 2010 fresh and processing vegetable and melon production was \$6.9 billion, down from 2009's revised total of \$7.6 billion. Lettuce remained the leading vegetable crop in value of production, at \$1.6 billion, followed by tomatoes with \$1.3 billion.

Vegetable crops that had value increases were asparagus, fresh snap beans, fresh carrots, garlic, leaf lettuce, watermelon, spring and summer storage onions, chili peppers, processing spinach, squash and fresh tomatoes. Crops that had decreased value included artichokes, broccoli, cabbage, processing carrots, cauliflower, celery, sweet corn, fresh cucumbers, leaf and Romaine lettuce, cantaloupe, honeydew, agaricus mushrooms, summer non storage onions, bell peppers, pumpkins, fresh spinach and processing tomatoes.

California's cash receipts for vegetables ranked number one in the nation and accounted for 35.5 percent of the U.S. total. Valued at \$6.9 billion, vegetables represented 20.8 percent of the state's total cash income from agriculture in 2010.

According to the USDA's Economic Research Service, per capita use of vegetables, melons, potatoes, sweet potatoes, pulse crops and mushrooms in the United States increased from 418 pounds in 2009 to 421 pounds in 2010.

Fresh market consumption per capita in 2010 was 170 pounds, 1 percent higher than in 2009. Utilization increased for asparagus, snap beans, cabbage, carrots, eggplant, lettuce, onions, bell peppers, pumpkins, radishes, tomatoes and watermelon. Declining utilization was observed for broccoli, cauliflower, garlic, spinach, squash and honeydew melon.

Per capita consumption of U.S. processing vegetables decreased 2 percent from 122 pounds in 2009 to 120 pounds in 2010. Processing vegetables whose utilization increased in 2010 included snap beans, processing tomatoes and green lima beans. Consumption decreased for processed sweet corn, green peas, cucumbers, spinach, beets, processed cabbage, chili peppers and dehydrated onion.

### Notable Increases in Production:

Fresh Market Cucumbers.....	28%
Chili Peppers .....	27%
Pumpkins .....	26%
Watermelon .....	16%
Romaine Lettuce.....	14%

### Notable Decreases in Production:

Artichokes.....	16%
Processing Spinach.....	16%
Cauliflower .....	15%
Processing Onions .....	14%
Fresh Spinach .....	13%

### Vegetable Production in California

	2009	---	85,000	---	32,180,000	---	483,559
2010	---	81,000	---	29,840,000	---	440,725	

1/ The processed price is based on equivalent returns at the processing plant door. The fresh market price is at the point of first sale.

2/ Includes both fresh marketing and processing vegetables.

3/ Estimates discontinued in 2002.

4/ Estimates began in 2000 and discontinued in 2002.

5/ Includes fresh and processed. Production includes quantity harvested, but not marketed because of loss during storage (shrinkage): 2000 to 2009 -- 250,000 cwt. Storage loss amounts are excluded when computing total value. Includes some quantities not marketed and excluded in computing value.

6/ Estimates began in 2000.

7/ Included in summer storage onions.

8/ Estimates began in 1929, but were reinitiated in 2000 after being discontinued for nine years.

9/ Estimates began in 2002.

10/ Miscellaneous vegetables and melons include: Green lima beans for processing, oriental vegetables, green peas, etc. The crops added in 2000 and discontinued in 2002 are excluded from the 2000 and 2001 miscellaneous totals.

**Non-Discrimination Statement**

The U.S. Department of Agriculture (USDA) prohibits discrimination in all of its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex (including gender identity and expression), marital status, familial status, parental status, religion, sexual orientation, political beliefs, genetic information, reprisal, or because all or part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD).

To file a complaint of discrimination, write to USDA, Assistant Secretary for Civil Rights, Office of the Assistant Secretary for Civil Rights, 1400 Independence Avenue, S.W., Stop 9410, Washington, DC 20250-9410, or call toll-free at (866) 632-9992 (English) or (800) 877-8339 (TDD) or (866) 377-8642 (English Federal-relay) or (800) 845-6136 (Spanish Federal-relay). USDA is an equal opportunity provider and employer.
