# Foreword

The 2016 crop year report contains detailed production and export data representing California's agricultural bounty. Cultivated by her hardworking farmers and ranchers, this bounty drives a large portion of California's economic engine. In fact, a recent nationwide economic study found that more than a quarter of American jobs are linked either directly or indirectly to the food and agriculture sectors!

In 2016, California's farmers and ranchers produced a diverse supply of agricultural products valued at more than \$46 billion. Exports of our state's agricultural goods amounted to more than \$20 billion. These figures should impress our citizens in the Golden State and consumers around the world, for they represent the annual production of the vital foods and fibers that sustain our families and fuel our hopes and dreams.

I am encouraged in imagining the future for California agriculture. For this industry both leads and serves in finding and implementing solutions to the challenges we confront—from resource allocation to climate change, and feeding a growing population—our farmers and ranchers invest every day in making our beloved state a better place to work, play and live.

The annual California Agricultural Statistics Review is the result of a joint effort between the U.S. Department of Agriculture's National Agricultural Statistics Service, California Field Office; and the California Department of Food and Agriculture. So, on behalf of the farmers and ranchers, thank you to the staff who collect, analyze and publish this important data. As always, it is my hope for continued success and economic vitality for California agriculture.

Yours truly,

Karen Ross, Secretary  
California Department of Food and Agriculture

# Agricultural Statistical Overview

The sales value generated by California agriculture decreased by 6.2 percent between the 2015 and 2016 crop years. The State's 76,700 farms and ranches received \$46.04 billion for their output, down from the \$49.10 billion received in 2015. California's revenue was led by the dairy industry followed by grapes and almonds.

Almond cash receipts decreased to \$5.16 billion. Cash receipts fell by 12.1 percent due to a decrease in prices from \$3.13 per pound of almonds in 2015 to \$2.44 per pound in 2016. Grape production generated \$5.58 billion in cash receipts in 2016, up 5.1 percent from 2015. Production decreased by 1.0 percent from 2015, and prices received by growers increased from \$782 per ton of grapes in 2015 to \$830 per ton in 2016. Revenue generated from cattle was \$2.53 billion, showing a significant decrease of 21.2 percent from the reported revenue of \$3.20 billion in 2015.

The dairy industry, California's leading commodity in cash receipts, generated \$6.07 billion for milk production in 2016, down 3.6 percent from 2015. Milk production decreased by 1.0 percent, and milk prices received by producers decreased from \$15.40 per one hundred pounds of milk sold in 2015 to \$15.00 per hundredweight in 2016. As the leading dairy producing state in the country, California produced nearly 18 percent of the nation's supply in 2016.

California remained the leading state in cash farm receipts in 2016 with combined commodities representing nearly 13 percent of the U.S. total. California's leading crops remained fruits, nuts and vegetables.

## *Notable Increases in California Value of Production:*

Pistachios .....	70%
Pecans .....	70%
Cucumbers, Fresh Market.....	60%
Kiwifruit.....	45%
Watermelon .....	44%
Grapes, Wine Type .....	26%

## *Notable Decreases in California Value of Production:*

Grapes, Raisin Type .....	-41%
Pumpkins.....	-41%
Cantaloupe .....	-38%
Dates .....	-23%
Hay, Alfalfa.....	-22%
Asparagus.....	-18%

## **Farm Facts**

In 2016, 76,700 farms operated in California, which is less than 1 percent fewer than in 2015. Over 27 percent of California farms generated commodity sales over \$100,000, greater than the national average of 20 percent. The amount of land devoted to farming and ranching in California decreased slightly to 25.4 million acres in 2016. The average farm size was 331 acres in 2016, up from the 2015 farm size, but still below the national average of 442 acres.

## **Land Values/Cash Rents**

The average value of California farm real estate increased in 2016 to \$7,900 per acre, up 2.6 percent from 2015. Irrigated cropland's value increased 1.6 percent to \$12,900 per acre and non-irrigated cropland increased 7.5 percent to \$4,300 per acre. The value of all cropland increased 2.1 percent to \$10,910. The value of pastureland remained

unchanged from the 2015 level at \$2,700 per acre. The rental rate of irrigated cropland increased to \$440 per acre, up from \$425 per acre in 2015. Pastureland rental rates increased from 2015 rental rates, up to \$16.00 per acre in 2016, from \$14.00 per acre in 2015.

## Top Commodities

California's top 20 crop and livestock commodities accounted for more than \$34 billion in value in 2016. Nine commodities exceeded \$1 billion in value in 2016. The cash receipts of eight of the top 20 commodities increased in value between 2015 and 2016. The growth in the cash receipts of pistachios, walnuts, peppers, tangerines and lemons were the largest percentage gains of the top 20 commodities. Grower returns are subject to change and could result in an updated dollar amount in next year's report.

## Weather Highlights for 2016

The year started out colder than average. The first storms of 2016 arrived in the first week with precipitation across most of the state. Temperatures warmed in the second week and heavy rain fell in places along the coast and the western slope of the Sierras. The heaviest snowpack accumulation continued to be in the northern part of the state. In the third week, precipitation was confined to the northern part of the state with continued near or above average temperatures. This pattern remained in place for the remainder of the month. The monthly average temperature was 43.2°F, which is 1.8°F higher than the long-term average. With a statewide average of 6.4 inches, precipitation was 147 percent of average.

February started off cooler than average and dry. Temperatures warmed in the second week with continued dry conditions. Precipitation finally showed up in the third week of the month with some good snow accumulation in the Sierra. Temperatures remained above average. The warm weather persisted to the end of the month and the only other precipitation was limited to the northern parts of the state. The monthly average temperature was 49.6°F, which is 5.2°F higher

### Top 5 Agricultural States in Crop Cash Receipts, 2016

Rank	State	Crop Cash Receipts <sup>1</sup>
	United States	\$1,000 357,252,284
1	California	46,041,467
2	Iowa	26,840,363
3	Nebraska	21,558,070
4	Texas	20,878,502
5	Minnesota	17,054,673

<sup>1</sup> Based on February 7, 2018 USDA Economic Research Service cash receipts.

than the long-term average and third highest value in 122 years of records. With a statewide average of 0.96 inches, precipitation was 26 percent of average and 14th driest February in 122 years.

March started dry but by the end of the first week, a significant atmospheric river pushed through the state dropping significant rain and snow. The wet weather continued in the second week with a second notable storm towards the end of the week. In the first 14 days of the month, the northern Sierra recorded 28 percent of its water year-to-date total of precipitation. The northern region snow-water equivalent gained 24 percent of its water-year total and Shasta and Oroville reservoirs combined gained over 1.5 million acre-feet. After these storms, the state dried out with the exception of a small wet wave in the last week of the month. The monthly average temperature was 51.2°F which is 3.3°F higher than the long-term average. With a statewide average of 5.0 inches, precipitation was 160 percent of average and 14th wettest in 122 years of record.

April began warmer than average with scattered showers over the coastal regions and the Sierra. Precipitation in the Central Valley was limited to one day. Warmer temperatures continued into the second week. Precipitation developed into widespread rainfall by the end of the week. In the third week temperatures were again above average and precipitation was limited to the northern part of the state. The last week was warm and dry at the beginning with precipitation moving into the northern part of the state in the latter part of the week. Atmospheric moisture remained to close out the month with coastal and valley fog present. The

monthly average temperature was 56.5°F, which is 3.8°F higher than the long-term average. With a statewide average of 1.40 inches, precipitation was 85 percent of average.

May started out with fairly constant temperatures due to a moist air mass over the state. This moist air led to mornings with radiation fog and scattered showers over most of the state. Temperatures cooled towards the end of the second week as Pacific air surged inland. Precipitation continued as scattered showers with the heaviest rain in the northern Sierra Nevada Mountains. In week three, temperatures jumped as a ridge developed over the state leading to dry conditions as well. Coastal areas were cooler due to the presence of the marine layer. Spotty showers returned in the following week as the ridge broke down with cooler temperatures prevailing as well. Temperatures warmed to close out the month leading to some thunderstorms over the Sierra Nevada. The monthly average temperature was 60.6°F, which is 1.0°F higher than the long-term

average. With a statewide average of 0.74 inches, precipitation was 83 percent of average.

June began warm and dry with cooler areas near the coast and higher elevations. This pattern continued through the second week of the month. The high pressure ridging broke down in the third week leading to cooler conditions and some thunderstorm activity in the Sierra Nevada. Onshore flow persisted through the end of the month with cooler temperatures near the coast but hot temperatures in the inland deserts.

The monthly average temperature was 70.8°F which is 4.2°F higher than the long-term average. With a statewide average of 0.19 inches, precipitation was 55 percent of average.

July started hot and dry with isolated thunderstorms at the higher elevations. This pattern continued through the second week of the month with a few showers on the North Coast. Cooler Pacific air

<sup>1</sup> Total value is based on USDA Economic Research Service cash receipts, November 29, 2017 release.

made entry into coastal areas of the state in the third week leading to locally cooler conditions. Hot weather persisted through the end of the month with a few isolated thunderstorms in the mountains. The monthly average temperature was 73.8°F which is 1.0°F higher than the long-term average. With a statewide average of 0.01 inches, precipitation was 7 percent of average and the driest value on record for July.

August continued the hot and dry conditions across the state, punctuated with scattered thunderstorms in the Sierra Nevada Mountains and southeast deserts. The second week saw no precipitation and cooler temperatures in the early part of the week. The respite was short lived as by that weekend, triple-digit temperatures were common in the valley and in some mountain locations. The heat continued into week three where thunderstorms again dropped rain in the desert and Sierra regions. The month closed out with a cooling trend and continued scattered showers. The monthly average temperature was 73.1°F which is 1.2°F higher than the long-term average.

September started with cool temperatures. During the second week temperatures warmed quickly and some locations experienced triple-digit temperatures. Scattered showers, including some snow at the higher elevations, slipped in the third week, but warming conditions in the latter part of the week saw any snow accumulation melt. The month closed out with a tropical moisture surge into the southeastern deserts

from the remains of Hurricane Paine while a Pacific low pressure system brought cooler weather and some showers into the northern part of the state including the Sierra Nevada Mountains. The monthly average temperature was 67.4°F which is 0.3°F higher than the long-term average. The average precipitation for the month was 0.04 inches which is 9 percent of the long-term average.

October started with cooler temperatures across the state with some scattered showers. While snowfall was observed at higher elevations, accumulations were small. Week two saw cooler than average temperatures and precipitation early in the week. Patchy frost was reported in some locations. Week three started dry and warm, but a storm system in the latter part of the week dropped precipitation across the state. Accumulations were greater in the northern part of the state. Early week precipitation in week four gave way to milder and drier conditions later in the week. However, the month closed out with another storm resulting in a wet Halloween for many. Snow accumulation was limited due to the high freezing elevations associated with the event. The monthly average temperature was 58.9°F which is 0.5°F higher than the long-term average. The average precipitation for the month was 3.45 inches which is 283 percent of the long-term average and third wettest October in 122 years.

### Top 10 Agricultural Counties

County	Total Value and Rank			Leading Commodities	
	2015	\$1,000	2016		
Kern	6,880,495	2	7,187,938	1	Almonds, Grapes (Table), Milk, Pistachios
Tulare	6,980,772	1	6,369,926	2	Milk, Cattle & Calves, Oranges, Grapes (Table)
Fresno	6,680,287	3	6,182,541	3	Almonds, Poultry, Grapes (Raisin), Milk
Monterey	4,705,143	4	4,256,073	4	Strawberries, Lettuce, Broccoli, Cauliflower

Kings	2,021,052	9	2,002,192	10	Milk, Cattle & Calves, Almonds, Cotton (Pima)

Source: California County Agricultural Commissioners' Reports

November started with cool temperatures across the state. After a few dry days, precipitation returned to the northern part of the state and Sierra Nevada Mountains for the weekend. Warm dry weather followed this second storm with foggy mornings in the Central Valley. The third week brought the month's largest series of storms with significant snowfall in the mountains and precipitation statewide. The heaviest precipitation was focused in the northern part of the state. Thanksgiving week saw more precipitation come into the state with the highest amounts arriving on the 27th. The month closed out with scattered showers and more precipitation on the North Coast. Temperatures were near normal to close out the month. The monthly average temperature was 50.7°F which is 2.6°F higher than the long-term average. The average precipitation for the month was 1.96 inches which is 70 percent of the long-term average.

December started with storms. By the end of the first week, things had dried out with warmer temperatures across the state. Precipitation returned in the second week with a series of storms impacting

the northern parts of the state. Periods of heavy precipitation were recorded on the 10th and 11th. An atmospheric river event hit the state in the third week with heavy precipitation, high freezing elevations and locally high runoff. The duration of the event was short, limiting the impacts from the event. A break in the weather lasted until Christmas when another front pushed through dropping more rain and snow. This storm moved north to south across the state with locally heavy snowfall in the Southern Sierra Nevada Mountains. Temperatures were near normal to close out the month and year. The monthly average temperature was 41.6°F which is 0.2°F cooler than the long-term average. The average precipitation for the month was 4.66 inches which is 119 percent of the long-term average. The state's five-year drought was significantly mitigated in the North State by the heavy October and December rains. The southern portion of the state continued to be parched as 2016 drew to a close.

<b>Dates</b>	Lettuce, Leaf	Pigeons and Squabs	<b>Walnuts</b>
Eggplant	Lettuce, Romaine	<b>Pistachios</b>	Watercress
Escarole/Endive	Limes	Plums	

<sup>1</sup> California is the sole producer (99 percent or more) of the commodities in **bold**.

<sup>2</sup> Includes tangelos, tangerines and tangors.

## Global Marketplace

California continues to set the pace for the rest of the nation as the country's largest agricultural producer and exporter. In 2016, California exported approximately 26 percent of its agricultural production by volume. In dollar terms, California's agricultural exports reached \$20.04 billion for 2016.

Significantly, California is the nation's sole exporter of many agricultural commodities, supplying 99 percent or more of the following: almonds, artichokes, dates, dried plums, figs, garlic, kiwifruit, olives and olive oil, pistachios, raisins, table grapes, and walnuts.

California's agricultural export values have realized tremendous gains in the past decade. While 2016 showed a decrease of 3.5 percent

California's Top 10 Agricultural Export Markets, 2016			
Rank	Country	Export Value \$1 Million	Leading Exports
1	European Union	3,488	Almonds, Wine, Walnuts
2	Canada	3,305	Wine, Tomatoes Processed, Strawberries
3	China/Hong Kong	2,044	Pistachios, Almonds, Wine
4	Japan	1,440	Rice, Almonds, Hay
5	Mexico	1,025	Dairy and Products, Tomatoes Processed, Almonds
6	Korea	895	Oranges and Products, Almonds, Rice
7	India	664	Almonds, Cotton, Walnuts
8	Turkey	414	Walnuts, Almonds, Rice
9	United Arab Emirates	402	Almonds, Walnuts, Hay
10	Vietnam	383	Almonds, Walnuts, Dairy and Products

from the year before, the value of California's agricultural exports has grown by 104 percent over the past 10 years.

California Agricultural Products Export Values and Rankings, 2014-2016

2016 Rank	Product	2014	2015 \$1 Million	2016	Change in Value 2015 to 2016 (In Percent) <sup>1</sup>

<sup>1</sup> Value of agricultural sector production is the gross value of commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

<sup>2</sup> A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales.

## Commodity Rank, Acreage, Production, and Value, 2016

## California's Fruit and Vegetable Crop Seasons

# County Statistical Data

California's counties reported a decrease of 3.9 percent in the value of agricultural production for 2016. Six counties reported agricultural production exceeding \$3.0 billion each. Fourteen counties reported a value of production in excess of \$1.0 billion. Kern County became the leading county with an agricultural production value of \$7.19 billion, an increase of 4.5 percent from the 2015 value. Tulare County was second in value of production with \$6.37 billion, an 8.8 percent decrease from 2015. Fresno County was third in value, with a decrease of 7.5 percent in production to \$6.18 billion. Monterey remained fourth in value with \$4.26 billion, a decrease of 9.5 percent from 2015.

## Notes to the Agricultural Commissioners' Data

The gross value of production published in this report includes all farm production, whether sold into usual marketing channels or used on the farm where it is produced. Values placed on pasture and range feed are included and fresh fruit and vegetable crop values are based on the Free-On-Board (F.O.B.) packed

price. Values are recorded for all products grown during the calendar year, regardless of when they are marketed. The California County Agricultural Commissioners' Reports publication also provides statistics on a broader range of commodities than estimates prepared by other agencies.

Because of these concepts, the State total for gross dollar values summarized in this report differs from the cash receipts to farmers estimated by USDA's National Agricultural Statistics Service, Pacific Region-California. The larger total value reported by Agricultural Commissioners results from the different definitions used in estimating total value of production rather than cash receipts to producers. Reports were received from 49 of 58 counties for 2016. Nine County Agricultural Commissioners' Reports: Del Norte, Lassen, Los Angeles, Modoc, Mariposa, Mendocino, Plumas, San Francisco, and Sierra, were not available at publication. Therefore, the 2015 reports were used for all but Modoc. Modoc was not published this year, as the last report received from Modoc County was from 2008.

Highlights by Rank and County Percentage of Total State Value, 2015-2016

Rank	Commodity	County Percentage of Total State Value
1	Grapes, All	Kern accounted for 25.4 percent of the total value, followed by Napa at 11.2 percent
2	Almonds	Kern accounted for 20.6 percent of the total value, followed by Fresno at 18.9 percent
3	Milk and Cream	Tulare accounted for 26.7 percent of the total value, followed by Merced at 15.2 percent
4	Cattle & Calves	Tulare accounted for 18.1 percent of the total value, followed by Fresno at 11.6 percent
5	Nursery Products	San Diego accounted for 23.6 percent of the total value, followed by Monterey at 8.2 percent
6	Berries, Strawberries	Monterey accounted for 31.3 percent of the total value, followed by Ventura at 28.3 percent
7	Lettuce	Monterey accounted for 63.8 percent of the total value, followed by Imperial at 15.9 percent
8	Pistachios	Kern accounted for 42.2 percent of the total value, followed by Tulare at 18.6 percent
9	Walnuts	San Joaquin accounted for 18.2 percent of the total value, followed by Butte at 15.6 percent
10	Oranges	Tulare accounted for 55.8 percent of the total value, followed by Kern at 23.7 percent
11	Chickens	Fresno accounted for 37.3 percent of the total value, followed by Merced at 34.8 percent
12	Tangerines	Kern accounted for 35.6 percent of the total value, followed by Tulare at 35.4 percent
13	Tomatoes, Processing	Fresno accounted for 34.8 percent of the total value, followed by Yolo at 12.5 percent
14	Silage, All	Tulare accounted for 36.1 percent of the total value, followed by Merced at 15.0 percent
15	Alfalfa Hay	Imperial accounted for 18.3 percent of the total value, followed by Kern at 11.3 percent

## California's Leading Timber Counties, 2016 <sup>1</sup>

Timber Rank	County	Timber Volume	Total Agricultural Value (Including Timber)	Timber Value	Timber Percentage of Total Agricultural Value Within County
		<i>Million Bd. Ft.</i>	<i>\$1,000</i>	<i>\$1,000</i>	<i>Percent</i>
1	Humboldt	231,607	326,072	70,391	21.6
2	Mendocino	106,727	177,527	39,342	22.2
3	Siskiyou	199,787	318,305	37,491	11.8
4	Shasta	169,333	118,138	37,005	31.3
5	Plumas	105,726	49,219	19,994	40.6

<sup>1</sup> Timber volume and value data are from the State Board of Equalization, Timber Tax Division.

Some counties include timber as a part of their crop report, following the pattern set by the California County Agricultural Commissioners and Sealers Association (CACASA). Since it is not comparable to earlier county summaries, timber has not been made a part of the main tables of this summary. The total 2016 value of production reported by the counties, including timber, is \$57.0 billion, down 3.9 percent from last year. At \$70.4 million, Humboldt County leads the state in timber production with 23 percent of the state's total timber value.

### County Agricultural Commissioners' Reports

Copies of individual County Agricultural Commissioners' Reports may be requested or obtained directly from each County Agricultural Commissioner's Office. Many of the counties publish the reports on their websites free-of-charge.

USDA's National Agricultural Statistics Service, California Field Office publications are available free-of-charge on the Internet at: [www.nass.usda.gov/ca](http://www.nass.usda.gov/ca).

# Field Crops

In 2016, the total value of California field crop production decreased to \$2.8 billion, down 10.3 percent from 2015. Barley, corn for grain, cottonseed, oats, potatoes, sweet potatoes, and sunflowers were the only field crops in California whose total value increased from 2015 to 2016. Decreases in other field crop values led to the decrease in total field crop value.

Cotton acreage increased from 2015 to 2016. The price of Upland cotton was \$0.88 per pound. The total value of Upland cotton was \$103.2 million in 2016. The 2015 Upland cotton price and value was withheld to avoid disclosing data for individual operations. California growers planted 155 thousand acres of American Pima cotton, up 38.0 thousand acres from 2015. The 2015 and 2016 Pima cotton price and value was withheld to avoid disclosing data for individual operations.

California produced nearly 5.04 million tons of alfalfa hay in 2016, valued at \$771.1 million. Production of hay other than alfalfa increased by 6.7 percent, while its total value decreased by 3.2 percent. Total hay production decreased 4.6 percent from 2015. In 2016, although there was a slight increase in acreage, there were noticeable changes in yield and in price per ton, which resulted in an overall decrease in the value of production.

Rice plantings increased by 26 percent, with 541 thousand acres planted in 2016. Medium grain rice contributed to 91 percent of the total rice acreage and 92 percent of the total production. Acreage increased for all types of rice: short, medium and long. Yield increased for short and long rice, while it decreased for medium rice. This resulted in a production increase of all three types of rice. The total value of rice production in 2016 was \$649 million, representing a decline of 7 percent from the previous year.

California corn for grain production was valued at \$89 million for 2016, a 115 percent increase from 2015. Harvested acreage increased by 67 percent. Yield and price both increased from the previous year. Harvested acreage increased to 100 thousand acres, and price increased by 9 percent. Harvested acres of corn silage decreased by 16 percent to 315 thousand acres in 2016. Production of corn silage decreased to 8.3 million tons, down 13 percent from 2015.

Forty-five percent of the California's wheat crop was harvested for grain in 2016. Wheat was planted on 480 thousand acres and 217 thousand were harvested for grain. Overall, production decreased 7 percent and value decreased 32 percent. The production of winter wheat increased 11 percent from 2015, while Durum wheat production decreased 40 percent from 2015.

### *Notable Increases in Value:*

Barley .....	127%
Corn, Grain .....	115%
Potatoes, Spring .....	41%
Potatoes, All .....	41%
Potatoes, Fall.....	40%

### *Notable Decreases in Value:*

Wheat, Durum.....	-60%
Wheat, All .....	-32%
Hay, Alfalfa .....	-22%
Hay, All .....	-19%
Safflower .....	-11%

## Field Crop Acreage, Production and Value, 2007-2016

Crop	Crop Year	Planted	Harvested	Yield Per Acre	Production	Value Per Unit	Total Value
Wheat, All <sup>1</sup>		<i>Acres</i>	<i>Acres</i>	<i>Tons</i>	<i>Tons</i>	<i>\$/Ton</i>	<i>\$1,000</i>
	2007	640,000	345,000	2.56	883,950	180.53	159,583
	2008	880,000	545,000	2.69	1,464,750	238.08	348,731
	2009	810,000	490,000	2.53	1,239,000	189.42	234,689
	2010	765,000	425,000	2.57	1,089,750	179.60	195,717
	2011	775,000	530,000	2.75	1,455,900	242.98	353,755
	2012	715,000	425,000	2.73	1,159,350	274.73	318,506
	2013	690,000	394,000	2.48	975,000	265.19	258,563
	2014	530,000	220,000	2.50	550,500	251.39	138,392
	2015	520,000	235,000	2.37	557,850	233.66	130,346
2016	480,000	217,000	2.39	519,060	171.90	89,226	

<sup>1</sup> Area planted includes preceding fall.

<sup>2</sup> Production is on a clean basis.

<sup>3</sup> Missing data has not been published due to the estimate being discontinued, not estimated, or not available.

<sup>4</sup> Includes varieties not listed separately. Excludes beans grown for garden seed.

<sup>5</sup> Planted acreage is for all purposes.

<sup>6</sup> Price and value derived from County Agricultural Commissioner data. Report from 2016 is not yet available.

<sup>7</sup> Production ginned. Cotton bales are 480 lbs. net-weight.

<sup>8</sup> Preliminary Marketing Year Average Price.

<sup>9</sup> All alfalfa forage production is the sum of alfalfa harvested as dry hay; and alfalfa haylage and greenchop production after converting it to a dry equivalent basis.

<sup>10</sup> All forage production is the sum of the following dry equivalents: alfalfa hay and all other hay harvested as dry hay, alfalfa haylage and greenchop, all other hay haylage and greenchop; after converting alfalfa and all other haylage and greenchop to a dry equivalent basis.

<sup>11</sup> Estimated marketings of alfalfa and other hay used as weights to calculate all hay prices.

<sup>12</sup> Includes only alfalfa and alfalfa mixtures that were harvested as haylage or greenchop (green weight). Alfalfa harvested as dry hay is not included.

<sup>13</sup> Includes all types of forage harvested as haylage or greenchop (green weight). Forage harvested as dry hay and corn and sorghum silage/greenchop are not included.

<sup>14</sup> Beginning in 2010, winter and summer estimates included in spring total.

<sup>15</sup> Sweet rice acreage has been included since the 2003 crop year.

<sup>16</sup> Excludes wild rice.

<sup>17</sup> Relates to year of intended harvest for fall planted beets in central California and to year of planting for overwintered beets in central and southern California. Data for 2016 is not yet available.

D Withheld to avoid disclosure of individual operations.

NA Not available.

# Floriculture

Floriculture data for 2016 is unavailable, as the Floricultural Survey was suspended in 2016.

In 2015, California's floriculture crop led the nation with crops valued at \$1.08 billion in sales, for operations with more than \$100,000 in sales, comprising 25 percent of the U.S. total wholesale value. California sales increased 1 percent from the 2014 value. California producers increased from 667 in 2014 to 685 in 2015.

For operations with more than \$100,000 in sales, California accounted for 14 percent of the total value of Total Bedding and Garden plants, the highest-valued crop category in the 15-state program. The wholesale value of California-grown

bedding and garden plants at \$266 million in 2015 was down 5 percent from 2014.

California also led the country in potted flowering plant value for 2015, with a total value of \$274 million wholesale, down 6 percent from the 2014. California accounted for 34 percent of the 15-state total wholesale value reported for potted flowering plants.

In 2015, California was the dominant state in cut flower production, accounting for about 78 percent of the total cut flower wholesale value. The \$294 million in value for 2015 was up 3 percent from 2014.

## Floriculture Production and Value for Operations with \$100,000+ Sales, 2016

Floriculture data for 2016 is unavailable, as the Floricultural Survey was suspended in 2016.

# Fruit and Nut Crops

In 2016, California accounted for 56 percent of the United States fruit and nut production and over 68 percent of the national value. Of the citrus crops, California accounted for 46 percent of the U.S. citrus production and 62 percent of the national value. In total, the state produced over 17 million tons of fruits and nuts in 2016. The state’s total value of all fruits and nuts in 2016 was \$19.7 billion.

Grapes overtook almonds this year for the number one valued fruit or nut crop in California, coming in at \$5.6 billion in production value for 2016. Almonds were a close second at \$5.2 billion. California is the number one producer of grapes in the United States, accounting for 88 percent of the total tonnage produced and nearly 90 percent of the production value. For almonds, California grows all of the domestic production and 80 percent of worldwide production.

Crops with record California production in 2016 were pistachios, pecans, mandarins, walnuts, almonds, strawberries, and raspberries. For nuts, California accounted for all of the national production of almonds, pistachios, and walnuts. For fruit, California grew all of the national production of figs, kiwifruit, olives, Clingstone peaches, dried plums, and raisins. California also accounted for a significant share of many other fruit crops. The state produced over 80 percent of the national production of apricots, avocados, dates, grapes, lemons, mandarins, nectarines, and plums.

In 2016, the nation’s largest fruit producing states were California, Florida and Washington. California accounted for over 62 percent of the harvested fruit acreage in the country.

## *Notable Increases in California Production:*

Pistachios.....	232%
Pecans.....	46%
Apricots.....	45%
Avocados.....	44%
Kiwifruit.....	35%
Plums.....	28%
Apples.....	25%
Oranges, Valencia.....	23%
Raspberries, Black.....	22%
Oranges, All.....	21%
Oranges, Navel & Misc.....	21%

## *Notable Decreases in California Production:*

Plums, Dried.....	-52%
Grapes, Raisin.....	-21%
Grapefruit, All.....	-21%
Dates.....	-20%

# Grape Crush

## Grape Crush Grape Overview

Information contained in this Report was supplied by processors to fulfill the reporting requirements of Section 55601.5 of the Food and Agricultural Code.

The August 25, 2017 Errata to the Final Grape Crush Report includes all grape tonnage crushed during the 2016 season. Changes in tonnage, Brix, and prices from the final report to this errata report were due to late reports and corrections to the original data. Reporting errors by some processors have caused a change in some district/variety entries.

Details of the crushed tonnage, degrees Brix, and weighted average prices were reported by grape type and variety, as well as by grape pricing districts. The 17 districts refer to the area in which the grapes were grown as defined in the California Code of Regulations.

## Summary of Grape Tonnages and Prices

The 2016 grape crush totaled 4,217,154 tons, up 9 percent from the 2015 crush of 3,868,459 tons. Red wine varieties accounted for the largest share of all grapes crushed, at 2,280,155 tons, up 12 percent from 2015. The 2016 white wine variety crush totaled 1,751,416 tons, up 5 percent from 2015. Tons crushed of raisin type varieties totaled 90,135, down 3 percent from 2015, and tons crushed of table type varieties totaled 95,448, up 35 percent from 2015. (See chart below.)

The Grape Crush Report includes the total number of tons crushed for concentrate production. In determining grape tonnage crushed for concentrate production, each processor was required to report the estimated equivalent tons of grapes crushed for grape concentrate. For the 2016 season, this total was 393,045 tons, 9 percent of the 2015 grape crush total. This report provides only the aggregate figure for grapes crushed for concentrate production and does not include information by district, type, or variety.

The 2016 average price of all grape varieties was \$763.47, up 14 percent from 2015. Average prices for the 2016 crop by type were as follows: red wine grapes, \$919.04, up 16 percent from 2015; white wine grapes, \$598.44, up 11 percent from 2015; raisin grapes, \$213.64, down 14 percent; and table grapes, \$153.05, down 39 percent.

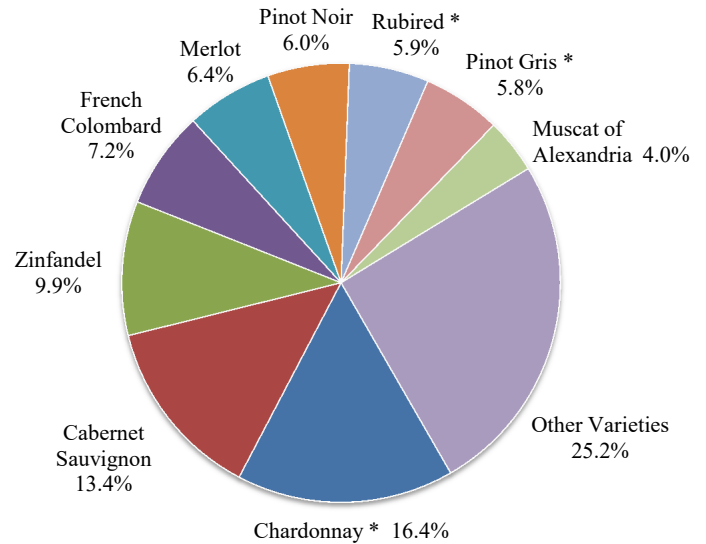

## Leading Grape Varieties and Districts

In 2016, Chardonnay continued to account for the largest percentage of the total crush volume with 16.4 percent. Cabernet Sauvignon accounted for the second leading percentage of crush with 13.4 percent. The next eight highest percentages of grapes crushed included only wine grape varieties. Thompson Seedless, the leading raisin grape variety crushed for 2016, held 1.8 percent of the total crush.

District 13, (Madera, Fresno, Alpine, Mono, Inyo Counties; and Kings and Tulare Counties north of Nevada Avenue (Avenue 192)), had the largest share of the State's crush, at 1,333,442 tons. The average price per ton in District 13 was \$301.83.

Grapes produced in District 4 (Napa County) received the highest average price of \$4,690.52 per ton, up 8 percent from 2015. District 3 (Sonoma and Marin counties) received the second highest return of \$2,591.22, up 6 percent from 2015. The 2016 Chardonnay price of

## Leading Varieties Crushed Percentage of Total 2016 Crush

\$886.65 was up 13 percent from 2015, and the Cabernet Sauvignon price of \$1,470.48 was up 12 percent from 2015. The 2016 average price for Zinfandel was \$604.62, up 5 percent from 2015, while the Merlot average price was up 5 percent from 2015 at \$774.91 per ton.

-- Zero

\* Synonyms for variety names are shown below.

**Grape Variety Synonyms**

Blaufraenkisch - Lemberger	Beauty Seedless - Black Beauty	Black Prince - Rose of Peru
Cinsaut - Black Malvoisie, Black Malvasia	Burger - Monbadon	Chardonnay - Pinot Chardonnay, Chardonnay Musque
Flame Seedless - Red Flame	Crimson Seedless - Red Crimson	Emerald Seedless - Black Seedless
Grenache - Grenache Noir	Gamay (Napa) - Gamay, Valdiguie	Gray Riesling - Trousseau Gris
Mataro - Mourvedre	Italia - Muscat Italia	Malaga - White Malaga
Muscat Blanc* - Muscat Canelli,	Meunier - Pinot Meunier	Moscato Gaillo - Muscat Yellow
Negrette - Pinot St. George	Muscat Blanc A Petits Grains	Muscat Hamburg - Black Muscat
Pinot Gris - Pinot Grigio	Nero D'Avola - Calabrese	Palomino - Golden Chasselas
Refosco - Mondeuse	Princess - Melissa	Red Globe - Rose Ito
Ruby Seedless - King Ruby	Ribolla Gialla - Rebolla	Rubired - Tintoria
St. Emilion - Ugni Blanc, Trebbiano	Sangiovese - Sangiovetto, Brunello	Sauvignon Vert - Muscadelle
Touriga Nacional - Touriga	Syrah - French Syrah, Shiraz, Syrah Noir	Tempranillo - Tinta Roriz, Valdepenas
White Riesling - Johannisberg Riesling, Riesling	Trousseau - Bastardo	Vermentino - Vennentino

# Livestock and Dairy

California's total livestock and livestock products cash receipts were over \$10.4 billion in 2016, down nearly 12 percent from 2015. The 21 percent decrease in cattle and calves receipts was the principle contributor to the drop in total livestock receipts, accounting for more than 48 percent of the total decrease. Livestock and livestock products accounted for over 23 percent of the state's gross cash receipts and over 6 percent of total U.S. livestock cash receipts. California ranked fourth behind Texas, Nebraska, and Iowa in total livestock receipts for 2016. Dairy products remained the state's leading commodity and accounted for 15.8 percent of receipts for U.S. dairy products or almost 21 percent more than Wisconsin. Receipts for hogs and pigs were down 19 percent from the previous year. Poultry and egg cash receipts were down 25 percent from 2015.

For the first half of 2016, the Golden State's dairy industry saw depressed prices received for market milk as the supply of milk on a national and global level outpaced demand. In May, market milk prices fell below \$13 per hundredweight. Prices strengthened as the year drew to a close as key export regions, with the exception of the United States, began to contract. 2015 was tough for dairymen with high production costs exceeding milk prices, high labor and replacement animal costs and slackening global demand. 2016 was not much better. Dairies continued to be shuttered. The state lost a total of 46 dairies in 2016 and 32 the prior year. In 2016, feed costs dropped to provide some relief, but labor costs and shortages, coupled with the fifth year of drought, took a toll on the state's dairy businesses. The trend towards larger dairies and diversification continued. Many dairies reported planting some of their feed devoted acreage to almonds and other nuts. Several small to midsize

operations sold out or moved out of state to find cheaper land, water and less state regulation.

The process to consider promulgation of a Federal Milk Market Order (FMMO) for California began in early 2015 with dairymen petitioning the USDA to initiate the process permitted by the 2014 Farm Bill. A public hearing was held in the Fall of 2015 and the process continued into 2016 as the USDA deliberated its recommendation and accepted briefs in October 2016. Given the extensive input, the original time line for the process was extended. 2016 ended with much anticipation regarding USDA's recommended decision, which was released in February 2017. The FMMO process continued through 2017 in anticipation of USDA's release of the final recommendation. Implementation of a California FMMO would require a favorable referendum of California dairy producers.

California continued to be the nation's leading dairy state. The Golden State's sales of milk and cream totaled \$6.07 billion in 2016, down from \$6.29 billion in 2015. Wisconsin, New York, Idaho and Michigan were the next leading states in total milk production. The top four dairy states accounted for over 45 percent of total U.S. dairy receipts. California ranked number one in the U.S. in the production of fluid milk, butter, Mozzarella, Hispanic cheeses, dry buttermilk, and nonfat dry milk. California continued to be second in total cheese production behind Wisconsin. California ranked 4<sup>th</sup> nationally in milk produced per cow per year in 2011, but slipped to 7<sup>th</sup> in 2013 and now is ranked 12<sup>th</sup> in 2016.

California's dairies produced 40.5 billion pounds of milk, accounting for 19 percent of the nation's milk supply. The monthly average production was nearly 3.4 billion pounds. Milk production

### Bee Colonies, Honey Production and Value, 2007-2016 <sup>1</sup>

Year	Bee Colonies 1,000	Yield Per Colony Pounds	Production 1,000 Pounds	Average Price Per Unit <sup>2</sup> ¢/Lb.	Value \$1,000
2007	340	40	13,600	104.0	14,144
2008	360	51	18,360	139.0	25,520
2009	355	33	11,715	139.0	16,284
2010	410	67	27,470	155.0	42,579
2011	370	48	17,760	165.0	29,304
2012	330	35	11,550	194.0	22,407

2014	320	39	12,480	206.0	25,709
2015	275	30	8,250	203.0	16,748
2016	310	36	11,160	200.0	22,320

<sup>1</sup> Producers with five or more colonies. Colonies which produced honey in more than one State were counted in each State.

<sup>2</sup> Average price per unit based on expanded sales.

per cow averaged 22,968 pounds, down almost 0.3 percent from 2015. California's total cheese production, excluding cottage cheese, for 2016 was 2.515 billion pounds, up 79 million pounds from the prior year. California milk going into cheese production comprised 46.4 percent of the state's total production. Mozzarella continued to account for the bulk of California cheese production, constituting over 59 percent of the state's cheese. Per capita consumption of cheese in America increased 3.6 pounds over the past decade.

According to the California Department of Food and Agriculture's Dairy Marketing Branch, 31 counties contributed to the state's commercial milk production. The top five milk-producing counties in California accounting for over 72 percent of the state's total milk production were Tulare (27.3 percent), Merced (15.2 percent), Kings (10.6 percent), Stanislaus (9.9 percent) and Kern (9.5 percent). Stanislaus County production decreased nearly 3.6 percent from 2015, while Tulare and Merced production decreased around 1.6 percent. Kern County production increased almost 0.7 percent from last year.

California contributes about 40 percent of the total U.S. dairy exports, per the California Milk Advisory Board. United States total dairy product export tonnage, according to USDA's Foreign Agricultural Service (FAS), declined 10 percent in 2016 from the prior year, and was down 34

percent from the record setting exports of 2014. Cheese exports decreased 10 percent from 2015 to nearly 287 thousand metric tons. Cheese exports in 2015 were 317 thousand metric tons. Butter exports increased by 8 percent from 23.2 thousand metric tons in 2015 to 25.0 thousand metric tons in 2016. Total fluid milk exports were up 12 percent during the year while the top two destinations, Canada and Mexico, increased 27 percent and 30 percent, respectively. In recent years these trading partners imported 70 percent or more of the fluid milk shipped from the United States. In 2016 and 2015, this dropped to around 56 percent, as more was imported by other South and Central American partners. In 2016, whey exports increased 13 percent to nearly 490 thousand metric tons. Many Asian markets were generally muted after several years of rising imports. The declining rate of economic growth in China, coupled with competition from other dairy exporters, a drop in Chinese demand, in part to consumer concerns about food safety, contributed to the decline in U.S. dairy exports to this lucrative market. Mexico remained the single largest importer of U.S. dairy products with over \$1.2 billion of milk products imported in 2016.

Cattle and calf sales totaled \$2.5 billion, compared with \$3.2 billion in 2015. California's total cattle and calf inventory on January 1, 2016 was 5.15 million, up 50 thousand from the prior January. Commercial cattle slaughter increased from 1.186 million head in 2015 to 1.219 million

head in 2016, while the annual average live weight was 1,354 pounds for both years. 2016's hog and pig sales were \$23.7 million, down from last year sales of \$29.1 million. The December 1, 2016 hog and pig inventory of 89 thousand head was 6 thousand less than the prior year. The state's commercial hog slaughter increased from 2.326 million in 2015 to 2.446 million head. Slaughtered hog annual average live weight was 246 pounds, down three pounds from the prior year. Sheep and lamb inventory increased from 575 thousand on January 1, 2016 to 585 thousand by January 1, 2017. Commercial sheep and lamb slaughter for 2016 was 314.6 thousand head, 23 thousand more than the prior year. The annual average live weight of sheep and lambs was 142 pounds, one pound less than 2015's average slaughter weight. Wool production declined in 2016 to 2.7 million pounds from the prior year's 2.85 million pounds. Wool price per pound also decreased five cents from 2015 to \$1.50 per pound.

To contribute to statistically strong baseline information about honey bee losses and help guide management decisions, USDA NASS created a Honey Bee Colony Loss survey with input from beekeepers, researchers and other stakeholders. The results of the first survey were released in May of 2016 and revealed an 8 percent decline in bee colonies between January 1, 2015 and January 1, 2016 for operations with five or more colonies. The new quarterly colony data will allow new levels of analysis. "Pollinators are essential to the production of food, and in the United States, honey bees pollinate an estimated \$15 billion of crops each year, ranging

from almonds to zucchinis" according to Dr. Ann Bartuska, USDA Deputy Under Secretary for Research, Education and Economics. In California, almonds are the second most valuable crop, with cash receipts in 2016 of \$5.158 billion.

2016 honey production in California totaled 11.16 million pounds. This was up 35 percent from the prior year. Producing colonies totaled 310 thousand, up 35 thousand from the 2015 colony count, and below the ten year average of 360 thousand hives. The prior four year trend of declining colonies was broken in 2016. The yield per colony averaged 36 pounds, compared to 30 pounds produced per hive in 2015. The average price received for honey in 2016 was \$2.00 per pound, three cents down from the prior year's price.

In 2016, poultry consumption in the U.S. remained high and surpassed levels of the previous two years according to the National Chicken Council surveys. The year was also notable for the industry with *Salmonella* bacteria outbreaks impacting 48 states. The CDC investigations of these traced many of them to live poultry contact in backyard flocks and not commercial poultry processors. Mexico lifted its avian influenza import restrictions on raw poultry and eggs in early 2016, allowing California poultry to be exported to Mexico. Avian influenza in the Midwestern states in 2015 pushed west coast egg prices up to more than \$2.50 per dozen in early 2016. By midyear, egg prices dropped to levels near the prices of November 2008 when California voters passed Proposition 2, which mandated minimum cage sizes for egg laying hens. The end of the five-year drought in California and restoration of the Midwest egg laying flocks contributed to the egg price recovery in 2016.

March rains in 2016 improved grass growth allowing lambs to thrive and a respite from the extended drought that decimated pasture conditions for the prior four years. Though U.S. demand for lamb increased with the growing immigrant population, the strong dollar dampened the domestic market with cheaper imports from Australian and New Zealand. As

the industry shrinks with consolidation of packinghouses and depressed prices, a growing number of producers are turning to nontraditional marketing including selling directly to consumers and restaurants.

Four years of drought have elevated concerns over fire danger and this has been realized with several very large wildfires this year. The rains of March stimulated grass and shrub growth not seen in recent years. Goats have been recruited to reduce the fuel load by grazing in danger spots. Several local fire departments and goat owners are teaming up to protect the state with targeted grazing. A growing demand for goat cheeses and other dairy products, like kefir, has stimulated interest in goat husbandry in the state. A large Swiss dairy

California Livestock Cash Income, 2015-2016 <sup>1</sup>

<sup>1</sup> Includes slaughter in federally inspected and in other slaughter plants, but excludes animals slaughtered on farms.

<sup>2</sup> Totals may not equal sum of parts due to rounding.

### Sows Farrowed and Pig Crop, 2007-2016

Year	Sows Farrowed <i>1,000 Head</i>	December - November	
		Pig Crop <i>1,000 Head</i>	Pigs Per Litter <i>Number</i>
2007	33	335	10.2
2008	21	196	9.3
2009	14	118	8.4
2010	16	122	7.6
2011	11	99	9.0
2012	8	64	8.0
2013	7	56	8.0
2014	8	59	7.4
2015	9	62	7.3
2016	7	49	7.0

## Hogs and Pigs Inventory, Supply and Disposition, 2007-2016

Year	Beginning Inventory December 1 (Previous Year)	Pig Crop (Dec.-Nov.)	Inshipments <sup>1</sup>	Marketings <sup>2</sup>	Farm Slaughter <sup>3</sup>	Deaths	Ending Inventory December 1
<i>1,000 Head</i>							
2007	145	335	13	285	7	46	155
2008	155	196	59	300	7	23	80
2009	80	118	172	253	6	11	100
2010	100	122	181	280	6	12	105
2011	105	99	165	246	5	13	105
2012	105	64	203	249	4	14	105
2013	105	56	197	244	3	16	95
2014	95	59	171	194	3	18	110
2015	110	62	151	204	3	21	95
2016	95	49	147	180	4	18	89

<sup>1</sup> For feeding or breeding, excludes stock brought in for immediate slaughter.

*Inshipment ratios for 2006 and 2007 revised based on new CDFA data.*

<sup>2</sup> Includes custom slaughter for use on farms where produced and state out-shipments, but excludes inter-farm sales.

<sup>3</sup> Excludes custom slaughter for farmers at commercial establishments.

## Goats by Class as of January 1, 2007-2016

Year	Angora Goats	Milk Goats <i>Head</i>	Meat and Other Goats
2007	3,500	37,000	95,000
2008	4,000	36,000	89,000
2009	4,000	37,000	95,000
2010	3,500	38,000	93,000
2011	3,500	38,000	100,000
2012	3,500	41,000	96,500
2013	3,500	40,500	93,500
2014	3,600	38,000	85,000
2015	3,400	40,000	85,000
2016	3,600	39,000	90,000

## Grazing Fee Annual Average Rates, 2007-2016 <sup>1</sup>

Year	Per Animal Unit <sup>2</sup>	Cow-Calf <i>Dollars Per Month</i>	Per Head
2007	16.50	21.50	17.30
2008	17.80	22.10	18.50
2009	16.70	21.00	17.50
2010	16.40	20.50	17.00
2011	17.30	21.50	18.20
2012	19.40	23.00	20.00
2013	19.50	23.50	21.00
2014	20.00	25.10	22.50
2015	19.10	25.50	23.50
2016	23.00	23.50	21.50

<sup>1</sup> The average rates are estimates based on survey indications of monthly lease rates for private, non-irrigated grazing land from the January Cattle Survey.

<sup>2</sup> Includes animal unit plus cow-calf rates. Cow-calf rate converted to animal unit (AUM) using (1 aum=cow-calf \*0.833).

### Sheep and Lambs by Class as of January 1, 2007-2016

Year	All Sheep	Sheep and Lambs on Feed for Market			Stock Sheep		Total
		Ewes 1 Yr.+	Replacement Lambs 1,000 Head	Wethers and Rams 1 Yr. +			
2007	610	260	290	50	10	350

<sup>1</sup> Preliminary data

<sup>2</sup> Excludes processed cheese and cottage cheese

<sup>3</sup> Includes Cheddar, Colby, washed curd, stirred curd, Monterey, and Jack

<sup>4</sup> Includes all cheeses not included in the above categories

<sup>5</sup> Includes low fat and nonfat cottage cheese. Fat content is less than 4 percent

<sup>6</sup> Contains minimum milk-fat content of 10 percent and not less than 4.5 pounds per gallon

<sup>7</sup> Includes hard, soft-serve, freezer-made milkshake, and freezer-made "milk drink"

Contains less than 10 percent milk-fat required for ice cream

<sup>8</sup> Not shown when fewer than three plants reported or individual plant operations could be disclosed

<sup>9</sup> Frozen products in 1,000 gallons

# Vegetables and Melons

California continued as the leading vegetable producing state in 2016, accounting for 40 percent of the U.S. harvested vegetable acres, 61 percent of the national production, and 55 percent of the value, for the 26 selected vegetables and melons estimated.

The total value of California’s 2016 fresh and processing vegetable and melon production was \$7.4 billion, down from 2015’s revised total of \$8.6 billion. Lettuce remained the leading vegetable crop in value of production, at \$2.0 billion, followed by tomatoes with \$1.3 billion.

Vegetable crops that had increased production were artichokes, broccoli, head lettuce, romaine lettuce, bell peppers, chili peppers, squash, and fresh market tomatoes.

Crops that had decreased production included asparagus, cabbage, celery, garlic, leaf lettuce, mushrooms, and pumpkins.

Fresh production was not available for the following commodities: snap beans, carrots, sweet corn, cucumbers, onion, cantaloupe, honeydew, watermelon, and spinach. Therefore, production comparisons were not possible to be computed.

## *Notable Increases in Production:*

Squash.....	48%
Chili Peppers.....	26%
Tomatoes, Fresh Market.....	21%
Bell Peppers .....	9%
Artichokes.....	7%
Romaine Lettuce.....	7%
Head Lettuce.....	6%

## *Notable Decreases in Production:*

Asparagus.....	11%
Leaf Lettuce .....	8%
Pumpkins.....	8%
Mushrooms .....	8%
Garlic.....	7%

<sup>1</sup> The processed price is based on equivalent returns at the processing plant door. The fresh market price is at the point of first sale.

<sup>2</sup> Includes both fresh marketing and processing vegetables.

<sup>3</sup> 2011 to 2015 were not published to avoid disclosing data for individual farms.

<sup>4</sup> Harvested area is in thousand square feet

<sup>5</sup> Primarily dehydrated and other processing. Production includes quantity harvested. Total Values equals production minus summer storage shrinkage and loss (250,000 cwt per year).

<sup>6</sup> Included in summer storage onions.

<sup>7</sup> Data in 2013 to 2015 were not published to avoid disclosing data for individual operations.

<sup>8</sup> Data for 2007 to 2015 is for Fresh Market and data for 2016 is for Fresh and Processed.

NA Not available.

<sup>2</sup> To avoid disclosure of individual operations, "Other Counties" includes: 2016: Butte, Contra Costa, Glenn, Madera, San Luis Obispo, Santa Clara, and Tulare.

2017: Butte, Contra Costa, Glenn, Madera, San Benito, San Luis Obispo, Santa Clara, and Tulare.

# California Agricultural Exports

In 2016, California’s agricultural exports totaled \$20.04 billion in value, representing a decrease of 3.5 percent compared to the previous year. As indicated in the table below, California’s agricultural exports have grown substantially over the past 10 years, despite slight contractions in 2009 and 2015, and no change in 2014.

California’s top valued agricultural export commodity continues to be almonds, with a value of \$4.50 billion in foreign sales in 2016. This figure, however, represents a decrease of 12.6 percent compared to 2015. California wine recorded an export value of \$1.49 billion in 2016, achieving a ranking second to almonds and narrowly surpassing dairy products, which achieved an export value of \$1.41 billion during the same year.

The principal 57 export commodities accounted for \$17.32 billion in export value in 2016, or 86 percent of the total value of California’s agricultural exports, while the remaining 14 percent of exports were associated with “Other Products and Mixtures.” Of the top 57 commodities exported, 16 showed an increase in export value of 5 percent or more, compared to the previous year, while 24 experienced a decrease in export value of 5 percent or more.

California’s share of total U.S. agricultural exports for 2016 was 14.9 percent, which is slightly lower than the state’s share during the previous year of 15.6 percent. California’s top 10 export destinations – the European Union, Canada, China/Hong Kong, Japan, Mexico, Korea, India, Turkey, United Arab Emirates, and Vietnam – accounted for 70.2 percent of the 2016 export value. Vietnam showed the largest growth in total export value compared to the previous year at 25.0 percent.

## Methodology

Data to compute agricultural exports are derived from official government sources, published industry sources and unpublished information from the government and the industry. Export *quantities* and *values* of the whole U.S. and California port districts are from the Department of Commerce (DOC) trade data posted on the United States International Trade Commission (USITC) online database (<http://dataweb.usitc.gov/>). Canadian import (value) data are from Strategis Canada’s online database (<http://strategis.ic.gc.ca/engdoc/main.html>). If the California export price is not available for a particular product, we use the U.S. average export price for that commodity in order to provide a dollar value for exports.

Production quantities and values are from various National Agricultural Statistics Service (NASS), Economic Research Service (ERS), and Agricultural Marketing Service (AMS) publications. A share of the raw data provided in these USDA service publications are released

California Agricultural Export Values, 2006-2016

Year	Export Value \$1 Billion
2016	\$20.04
2015	\$20.76
2014	\$21.55
2013	\$21.55
2012	\$18.45
2011	\$17.23
2010	\$14.75
2009	\$12.44
2008	\$12.90
2007	\$11.17
2006	\$9.82

as a preliminary report early in the calendar year followed by a more accurate final report released at a later date. For accuracy, The University of California Agricultural Issues Center (AIC) export estimates use data from final USDA reports.

AIC exports estimates use different methods from other sources, such as ERS. The ERS estimates are based on a state's national share of production of the exported commodity. The ERS method assumes that, for any particular commodity, a state's share of U.S. production equals that state's share of U.S. exports. Other sources use geographic port data, without direct links to where the product originated. The AIC export figures correspond to commodities that have been produced on farms and ranches within

California. Products originated in another state and exported via California ports are not included in these statistics.

In most cases, AIC reports exports at the individual commodity level. For instance, exports of a given fruit in fresh, canned, and dried forms are summed and listed under the name of the fruit, although the method for fresh fruit exports may differ from the method used for canned and dried fruit. The ratio of quantity exported to quantity produced is given on a farm weight basis. That means, for example, that wine is converted back into fresh grapes. Standard conversion factors published by the USDA are applied.

## California Agricultural Products Export Values and Rankings, 2014-2016

56	Mushrooms	4	5	4	-7.4
57	Artichokes	4	3	3	3.9
	<b>Total Principal Commodities<sup>6</sup></b>	<b>18,726</b>	<b>17,983</b>	<b>17,318</b>	<b>-3.7</b>
	<b>Total Other Products and Mixtures<sup>2, 5, 7</sup></b>	<b>2,828</b>	<b>2,776</b>	<b>2,723</b>	<b>-1.9</b>
	<b>Total All Agricultural Exports<sup>8</sup></b>	<b>21,554</b>	<b>20,760</b>	<b>20,041</b>	<b>-3.5</b>

<sup>1</sup> Total export values for each year are rounded to the nearest million dollars. More precise values are used in the percent change calculations.

<sup>2</sup> Export values for 2015 were revised based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.

<sup>3</sup> Hides and skins are included in the heading "Beef and Products".

<sup>4</sup> "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.

<sup>5</sup> Export values for 2014 were revised based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.

<sup>6</sup> "Total Principal Commodity" values for 2014 and 2015 were revised based on updates to U.S. Department of Agriculture/National Agricultural Statistics Service production data.

<sup>7</sup> "Total Other Products and Mixtures" is composed of (a) highly processed products that are difficult to attribute to a specific commodity such as mixtures of fruits, nuts and vegetables and other processed foods; (b) categories for which the listed item does not provide data on individual commodities and (c) animal and plant products marketed in such small quantities that they are not included in the top 57 leading commodities.

<sup>8</sup> "Total All Agricultural Export" values for 2014 and 2015 were revised based on updates to U.S. Department of Agriculture/National Agricultural Statistics Service production data.

<b>Flowers and Nursery</b>	<b>389</b>	<b>22.0</b>	<b>406</b>	<b>23.9</b>	<b>8.4</b>
<b>Total California Principal Commodities</b>	<b>44,977</b>	<b>39.9</b>	<b>43,836</b>	<b>39.5</b>	<b>-1.0</b>
<b>Total Other Products and Mixtures</b> <sup>4</sup>	<b>88,075</b>	<b>3.2</b>	<b>91,053</b>	<b>3.0</b>	<b>-5.1</b>
<b>Total U.S. Agricultural Exports</b> <sup>5</sup>	<b>133,053</b>	<b>15.6</b>	<b>134,889</b>	<b>14.9</b>	<b>-4.8</b>

<sup>1</sup> Hides and skins are included in the heading "Beef and Products".

<sup>2</sup> "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.

<sup>3</sup> Product category "Olives and Olive Oil" is equal to the product category "Olives and Products" found in previous years' data tables.

<sup>4</sup> Total "Other Products and Mixtures" is equal to "Total U.S. Agricultural Exports" minus "Total California Principal Commodity Exports".

<sup>5</sup> Total U.S. agricultural export values come from USDA. USDA defines agriculture to include: live animals, meat, and products of livestock, poultry, and Dairy products; hides and skins (but not leather products); animal fats and greases; food and feed grains and grain products; oilseeds and oilseed products; fruits, nuts, and vegetables and products of these; juices, wine, and malt beverages (not distilled spirits); essential oils; planting seeds; raw cotton, wool, and other fibers (not manufactured products of these); unmanufactured tobacco (not manufactured tobacco products); sugar and sugar products; coffee, cocoa, tea, and products of these; rubber and allied products; and stock for nurseries and greenhouses, spices, and crude or natural drugs. Fish, shellfish, and forestry products are not included in "agriculture".

<sup>1</sup> This table shows destinations that receive shares of total exports greater than or equal to 5 percent of each commodity in either 2015 or 2016 for which reliable data are available. The commodities are listed in order of export value and the numbers in parentheses correspond to the 2016 ranking in the Table "California Agricultural Products Export Values and Rankings, 2014-2016."

<sup>2</sup> Accurate export destination data are only available for 50 of the top 57 commodities. The commodities for which export destinations are not included are "Apples", "Chickens", "Eggs", "Mushrooms", "Seeds for Sowing", "Turkey" and "Wheat".

<sup>3</sup> Hides and skins are included in the heading "Beef and Products".

<sup>4</sup> "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.

<sup>1</sup> This table provides the total export value and export values for individual commodities to the top 15 destinations. Only commodities with export values greater than \$2 million to the destination are reported.

<sup>2</sup> "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.

<sup>3</sup> Hides and skins are included in the heading "Beef and Products".

<sup>1</sup> The EU-28 members to which California exports are shipped reflect only the initial destination of the product, not the EU country of consumption. Many products are distributed throughout the EU after the initial entry.

<sup>2</sup> "Other Principal Products" are those that individually account for less than \$100 million in export value to the EU.

<sup>3</sup> Accurate export destination data is only available for 50 of the top 57 commodities. The commodities for which export destinations are not included are "Apples", "Chickens", "Eggs", "Mushrooms", "Seeds for Sowing", "Turkey" and "Wheat". Totals may not equal due to rounding.

<sup>4</sup> "Other EU Members" in 2016 include Austria, Bulgaria, Cyprus, Croatia, Czech Republic, Estonia, Finland, Greece, Hungary, Ireland, Latvia, Lithuania, Luxembourg, Malta, Portugal, Romania, Slovak Republic, and Slovenia. In 2015 "Other EU Members" included Poland and not Luxembourg. All these countries combined account for just over 4 percent of California agricultural exports to the EU in 2016.

<b>Weighted Average <sup>7</sup></b>				<b>0.26</b>			<b>0.26</b>

<sup>1</sup> Export quantities of processed goods were converted to farm fresh quantities using conversion factors published by USDA ERS (<https://www.ers.usda.gov/publications/pub-details/?pubid=41881>) or annual conversion factors published by USDA NASS in annual crop summaries.

<sup>2</sup> Quantities for 2015 were revised based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.

<sup>3</sup> Hides and skins are included in the heading "Beef and Products".

<sup>4</sup> Farm quantity exported for "Dairy and Products" is calculated by converting cheese, condensed milk, fluid milk, ice cream, nonfat dry milk, and whole dry milk to their fluid milk equivalents.

<sup>5</sup> "Grapes, All" includes grape juice, raisins, table grapes, and wine.

<sup>6</sup> "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.

<sup>7</sup> The weighted average is based on each of the 53 commodity's share of production value. Values for "Chickens", "Flowers and Nursery", "Mushrooms" and "Seeds for Sowing" are not included because reliable data on export quantity is not available.
