Foreword

California remains the national leader in agricultural production and exports. In 2017, California farms and ranches collected over \$50 billion in cash receipts for their output, an increase of almost 6 percent compared to 2016. Exports of our state's agricultural goods amounted to more than \$20.5 billion, a slight increase over the year before and almost double the amount 10 years ago.

This crop report reveals in tables and charts what we know in our stomachs and hearts—California's farmers and ranchers provide very well for us. They produce an astonishing array of products and achieve the highest standards in quality, food safety and environmental stewardship.

As you know, farming and ranching can be a tough business. But these are still exciting times for agriculture! As we move further into the 21st century we see a worldwide demand for food that is growing rapidly, and a corresponding demand for California-grown products that will bring tremendous opportunity for producers able to maintain sustainability in the face of climate change.

California agriculture has an inspiring story of innovation and resiliency. As we move forward, it's important to share this story and remember that we're all in this together as we work to safeguard for future generations what our forebears have provided for us—our California way of life.

The annual California Agricultural Statistics Review is the result of a joint effort between the U.S. Department of Agriculture's National Agricultural Statistics Service - California Field Office and the California Department of Food and Agriculture. Thank you to the staff who collect, analyze and publish this important data. As always, we are committed to continued success for California agriculture.

Yours truly,

Karen Ross, Secretary
California Department of Food and Agriculture

Agricultural Statistical Overview

The sales value generated by California agriculture increased by 5.7 percent between the 2016 and 2017 crop years. The state's 77,100 farms and ranches received a total of \$50.13 billion for their output in 2017. Dairy was California's leading agricultural commodity during the year in terms of cash receipts, followed by grapes and almonds, respectively.

Almond cash receipts increased to \$5.60 billion in 2017. Cash receipts rose by 10.9 percent, compared to the previous year, due to an increase in volume to 2.27 billion pounds and an increase in the average price received per pound for the crop. Grape production generated \$5.79 billion in cash receipts in 2017, up 3.1 percent from 2016. While production decreased by 4 percent from the prior year, the average price received by growers increased from \$832 per ton in 2016 to \$894 per ton in 2017. Revenue generated from the sale of cattle and calves was \$2.63 billion in 2017, which represents an increase of 2.7 percent from the previous year.

The dairy industry generated \$6.56 billion in cash receipts in 2017, up 8.2 percent from 2016. Total milk production during the year decreased by 1.7 percent compared to the previous year; however, the average price of farm milk received by producers increased from \$15.00 per hundredweight in 2016 to \$16.50 per hundredweight in 2017. As the leading dairy producing state in the country, California accounted for over 18 percent of the nation's milk supply in 2017.

California remained the leading state in cash receipts for agricultural products in 2017, with combined commodities representing 13.4 percent of the U.S. total. California's leading crops remained fruits, nuts and vegetables.

Notable Increases in California Production:

Plums, Dried	94%
Cherries, Sweet	78%
Beans, Garbanzo Dry	37%
Potatoes, Spring	29%
Pumpkins.....	27%
Cotton, American-Pima.....	25%
Haylage and Greenchop, All	20%
Potatoes, All	20%

Notable Decreases in California Production:

Barley	-69%
Raspberries, Black	-47%
Avocados.....	-44%
Beans, Blackeye Dry.....	-44%
Haylage and Greenchop, Alfalfa.....	-42%
Asparagus.....	-41%
Wheat, Durum.....	-39%
Apricots.....	-34%
Pistachios	-33%

Farm Facts

In 2017, 77,100 farms operated in California, which is slightly more than the previous year. Over 27 percent of California farms generated commodity sales greater than \$100,000, which exceeds the national average for this category of 19.9 percent. The amount of land devoted to farming and ranching in California decreased slightly from the prior year to 25.3 million acres in 2017. The average farm size in California was 328 acres in 2017, which is three acres less than the state's average farm size in 2016, and below the national average of 444 acres.

Land Values/Cash Rents

The average value of California farm real estate increased 10.1 percent in 2017 compared to the previous year, to \$8,700 per acre. During the year, the average value for irrigated cropland was \$13,300 per acre, while the average value for non-irrigated cropland was \$4,600 per acre. The average value of all cropland increased 3.5 percent compared to the previous year, to \$11,290 per acre. In 2017 the average value of pastureland remained unchanged from the prior year at \$2,700 per acre. The average rental rate for irrigated cropland increased to \$510 per acre in 2017, up from \$440 per acre during the previous year. The average rental rate for pastureland decreased from \$16 per acre in 2016 to \$12 per acre in 2017.

Top Commodities

California's top 20 crop and livestock commodities accounted for \$37 billion in value in 2017, with nine individual commodities exceeding \$1 billion in value during the year. Fifteen of the top 20 commodities increased in value in 2017 compared to the previous year. Of the top 20 commodities, cotton, raspberries, lettuce, and walnuts experienced the largest percentage growth in cash receipts during the year. Grower returns are subject to change and could result in an updated dollar amount in next year's report.

Weather Highlights for 2017

January started off colder than average. The first storms of 2017 arrived in the first week with precipitation reaching most of the state via an atmospheric river that started in the southern part of the state and shifted northward. Temperatures warmed with the atmospheric river with freezing elevations jumping from below 4000 feet to above 8000 feet. In the second week a pair of atmospheric rivers made landfall with heavy rain and freezing elevations nearing 10,000 feet in the first event and above 7,000 feet in the second. Cold air behind the atmospheric rivers led to heavy snowfall in the Sierra Nevada mountains with accumulations topping five feet in some places. In week three, cooler temperatures and drier air led

Top 5 Agricultural States in Crop Cash Receipts, 2017

Rank	State	Crop Cash Receipts ¹
		\$1,000
	United States	374,341,092
1	California	50,132,029
2	Iowa	26,979,830
3	Texas	22,901,476
4	Nebraska	21,456,823
5	Minnesota	17,286,890

¹ Based on August 30, 2018 USDA Economic Research Service cash receipts.

to a break in the storms. A fourth atmospheric river event made landfall at the end of the third week followed by cold air and continued precipitation driving snow totals to above average. A short-duration fifth atmospheric river made landfall in the fourth week with freezing elevations only jumping to 6,000 feet. Temperatures warmed to close out the month with drier conditions. January 2017 was a cooler-than-average and wetter-than-average month for California. According to the Western Region Climate Center's California Climate Tracker, the monthly average temperature was 40.9°F which is 0.6°F lower than the long-term average. With a statewide average of 10.3 inches, precipitation was 237 percent of average and the fifth-wettest January in the 123-year period of record.

February initially was cooler than average and dry. Towards the end of the first week, the first of six atmospheric rivers to impact the state during the month made landfall. Freezing elevations were below 8,000 feet yielding notable increases to the snowpack at higher elevations. The second week saw a series of back-to-back atmospheric river events with freezing elevations jumping above 10,000 feet leading to flood-producing runoff. Flood impacts were widespread across the state. A short break in the weather closed out the week before the second set of three atmospheric rivers made landfall in week three. Freezing elevations again topped 10,000 feet in the first event while the second two events saw the freezing elevation drop below 8,000 feet. The durations of these three events were shorter than the earlier events. Runoff from these events was less severe than earlier in the month as

well, although flooding concerns remained through the month. Precipitation continued through the end of the month as well. February 2017 was a warmer-than-average and wetter-than-average month for California. The monthly average temperature was 46.4°F which is 1.9°F higher than the long-term average. With a statewide average of 8.03 inches, precipitation was 219 percent of average and 4th wettest February in 123 years of record.

March started with moderate to heavy rainfall hitting the southern part of the state. Towards the end of the first week, a colder system moved across the state bringing precipitation to the northern regions before moving across the southern regions. The Sierra Nevada received upwards of eighteen inches of snow in some locations. The second week included a warmer and drier pattern with light precipitation on the coast and in the mountains. The warm, dry weather continued into the third

week with rainfall confined to the northern parts of the state. Desert areas reached the 100 degree Fahrenheit mark. The month closed out oscillating between warm and dry and cool and wet as a number of quick systems moved across the state. Temperatures cooled from the previous week's high values. March 2017 was a warmer-than-average and drier-than-average month for California. The monthly average temperature was 51.7°F which is 3.8°F higher than the long-term average. With a statewide average of 2.31 inches, precipitation was 73 percent of average.

April began with intermittent days of rain in the mountains and northern valleys. April 1 is the traditional peak of the seasonal snowpack. Snowlines were near 6,000 feet with significant depths in many locations. A Pacific storm system in week two brought locally heavy precipitation and snow at higher elevations. Warming temperatures

¹ Total value is based on USDA Economic Research Service cash receipts, October 30, 2018 release.

and longer days initiated melt in the snowpack prior to the storm. The warm and intermittently wet pattern continued throughout the rest of the month. The precipitation missed the central and southern coasts and inland desert regions of the southeast. April 2017 was a warmer-than-average and wetter-than-average month for California. The monthly average temperature was 54.4°F which is 1.8°F higher than the long-term average. With a statewide average of 2.78 inches, precipitation was 170 percent of average.

May opened with showers and rainfall hitting the south coastal communities and the Sierra. Temperatures in the triple digits were observed in the southeast deserts. Isolated showers across the state from two different weather systems impacted week two. Temperatures were cooler than the first week. Week three saw more showers for the Sierra and a strong warm-up at the end of the week that led to notable increases in snowmelt runoff. The month closed out with the ridge weakening bringing cooler temperatures to the state. May 2017 was a warmer-than-average and drier-than-average month for California. The monthly average temperature was 61.8°F which is 2.3°F higher than the long-term average. With a statewide average of 0.28 inches, precipitation was 30 percent of average.

June started with scattered showers and thunderstorms creating localized precipitation across the state with cooler temperatures prevailing. Isolated showers across the state continued into

week two with temperatures starting to warm. Week three included a strong warm-up that led to peak snowmelt runoff for the southern Sierra. The month closed out with continued hot weather with a number of daily record temperatures set and temperatures exceeding 120°F in the desert regions of the state. June 2017 was a warmer-than-average and drier-than-average month for California. The monthly average temperature was 70.3°F which is 3.7°F higher than the long-term average. With a statewide average of 0.30 inches, precipitation was 84 percent of average.

July began hot and dry with the only rain falling on the north coast. Temperatures in the triple digits were observed across the state with a number of records broken on the 7th and 8th. Isolated showers across the Sierra occurred in weeks two and three with continued warm temperatures. The month closed out with some development in the Southwest Monsoon that provided rainfall to the Southeast part of the state. July 2017 was a warmer-than-average and drier-than-average month for California. The monthly average temperature was 75.8°F which is 3.0°F higher than the long-term average. This was the fifth warmest July in the 123 years of record. With a statewide average of 0.02 inches, precipitation was 8 percent of average and tied 2009 for lowest statewide precipitation for July.

August opened with record heat and thunderstorms dropping some heavy rain east of San Diego. Some light showers from an upper level disturbance

Source: California County Agricultural Commissioners' Reports

crossed the northern part of the state at the end of the week. Week two continued the hot weather with convective activity more focused on the Sierra and near the Oregon border. Temperatures moderated to near normal in the last half of the month with continued thunderstorm activity in the Sierra. The month closed with more hot weather and scattered showers across the Sierra. August was warmer and drier than average. The monthly average temperature was 75.1°F which is 3.3°F higher than the long-term average. This was the second warmest August in the 123 year period of record. With a statewide average of zero inches, precipitation was tied with the lowest statewide precipitation for August.

September began with record heat in some locations and scattered thunderstorms along the Sierra Nevada crest. The hot weather and thunderstorms continued into the second week. A trough of low pressure over the western states brought cooler temperatures and scattered rainfall to several locations by the third week of September. Frost was reported in the Sierra Nevada. Cooler weather prevailed into the last week of the month and more rain fell on the North Coast. The month closed with warmer and drier conditions. September continued the trend of being a warmer and drier-than-average month. The monthly average temperature was 68.5°F which is 1.4°F higher than the long-term average. With a statewide average of 0.05 inches, precipitation was 12 percent of the long term average precipitation and the third-driest September in 122 years.

No precipitation was reported for the month of October for much of the state. Cold air pushed into the state mid-month, bringing record lows and strong north winds creating extreme fire conditions. Several wildfires erupted during the extreme winds and impacted many communities in northern California. Rain fell on the North Coast during the third week of October. The month closed out with high pressure dominating the Great Basin, leading to hot dry weather for California and triple digit temperatures in parts of southern California. October was warmer and drier-than-average. The monthly average temperature was 59.8°F which is 1.5°F higher than the long-term average. With a

statewide average of 0.43 inches, precipitation was 31 percent of the long-term average.

November started with warm and dry conditions across the state. A weather system dropped down from the Gulf of Alaska bringing rain to the northern part of the state by the end of the first week of November. This was followed by a second storm with atmospheric river characteristics. Heavier precipitation accumulates led to elevated stream flows and a brief monitor state on the Truckee River at Truckee. Little snow accumulated behind the front, though some morning fog developed locally. A high pressure system built in behind the cold front leading to significant warming and record temperatures. Several locations in southern California reported temperatures above 90°F during Thanksgiving week. The month ended with a weak weather system skirting over the state with precipitation focused in the mountain areas. The monthly average temperature was 51.4°F which is 3.3°F higher than the long-term average. With a statewide average of 3.53 inches, precipitation was 123 percent of the long-term average

December initially saw a weather system drop some light rain in the northern part of the state. Warm, and dry conditions persisted in southern California. As a strong ridge of high pressure sat over the Great Basin, dry conditions prevailed in the state. Santa Ana winds in southern California drove several fires to grow rapidly, including the Thomas Fire in Ventura and Santa Barbara counties. This fire eventually became the largest fire in state history. By the end of the third week of December a weather system moved into northern California bringing some rain. The month ended with another high pressure system pushing up temperatures. December was warmer and drier than average. The monthly average temperature was 44.4°F which is 2.6°F higher than the long-term average. With a statewide average of 0.32 inches, precipitation was 7 percent of the long-term average.

¹ California is the sole producer (99 percent or more) of the commodities in **bold**.

² Includes tangelos, tangerines and tangors.

Global Marketplace

California continues to set the pace for the rest of the nation as the country's largest agricultural producer and exporter. In 2017 California exported approximately 28 percent of its agricultural production by volume. In dollar terms, California's agricultural exports reached \$20.56 billion for 2017.

Significantly, California is the nation's sole exporter of many agricultural commodities, supplying 99 percent or more of the following: almonds, artichokes, dates, dried plums, figs, garlic, kiwifruit, olives and olive oil, pistachios, raisins, table grapes, and walnuts.

California's agricultural export values have realized tremendous gains in the past decade. With 2017 exports showing an increase of

¹ Value of agricultural sector production is the gross value of commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

² A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales.

County Statistical Data

California's counties reported an increase of 5.1 percent in the value of agricultural production for 2017. Six counties reported agricultural production exceeding \$3 billion each. Fourteen counties reported a value of production in excess of \$1 billion each. Kern County remained the leading county with an agricultural production value of \$7.25 billion, which represents a 0.9 percent increase from the value attained in 2016. Tulare County was second in value of production at \$7.04 billion, which represents an increase of 10.5 percent from the year before. Fresno County ranked third in production value, with an increase of 13.6 percent from the prior year to \$7.02 billion in 2017. Monterey County remained fourth in agricultural production for the year, with a value of \$4.43 billion.

Notes to the Agricultural Commissioners' Data

The gross value of production reported in this publication includes all farm production, whether sold into usual marketing channels or used on the farm where it is produced. Values placed on pasture

and range feed are included and fresh fruit and vegetable crop values are based on the Free-On-Board (F.O.B.) packed price. Values are recorded for all products grown during the calendar year, regardless of when they are marketed. The California County Agricultural Commissioners' Reports publication also provides statistics on a broader range of commodities and estimates prepared by other agencies.

Because of these concepts, the state total for gross dollar values summarized in this publication differs from the cash receipts to farmers estimated by USDA's National Agricultural Statistics Service, Pacific Region-California. The larger total value reported by Agricultural Commissioners results from the different definitions used in estimating total value of production rather than cash receipts to producers. Reports used to compile information in this publication were received from 47 of 58 counties for the 2017 crop year. Eleven County Agricultural Commissioners' Reports (Del Norte, Humboldt, Lake, Mariposa, Mendocino, Modoc, Plumas, San Benito, San Francisco, Sierra, and

Highlights by Rank and County Percentage of Total State Totals, 2017

Rank	Commodity	County Percentage of Total State Totals
1	Grapes, All	Kern accounted for 25.4 percent of the total value, followed by Fresno at 13.3 percent
2	Milk and Cream	Tulare accounted for 26.8 percent of the total value, followed by Merced at 15.5 percent
3	Almonds	Kern accounted for 19.0 percent of the total value, followed by Fresno at 18.3 percent
4	Cattle & Calves	Tulare accounted for 17.9 percent of the total value, followed by Fresno at 11.9 percent
5	Nursery Products	San Diego accounted for 23.4 percent of the total value, followed by Stanislaus at 8.9 percent
6	Strawberries	Monterey accounted for 30.0 percent of the total value, followed by Ventura at 28.6 percent
7	Lettuce	Monterey accounted for 60.5 percent of the total value, followed by Imperial at 17.5 percent
8	Pistachios	Kern accounted for 31.6 percent of the total value, followed by Fresno at 29.4 percent
9	Walnuts	San Joaquin accounted for 18.4 percent of the total value, followed by Butte at 14.8 percent
10	Oranges	Tulare accounted for 50.8 percent of the total value, followed by Kern at 28.7 percent
11	Tangerines	Tulare accounted for 34.6 percent of the total value, followed by Fresno at 32.0 percent
12	Chickens	Fresno accounted for 42.2 percent of the total value, followed by Merced at 33.8 percent
13	Alfalfa Hay	Imperial accounted for 17.0 percent of the total value, followed by Merced at 13.2 percent
14	Silage, All	Tulare accounted for 32.6 percent of the total value, followed by Stanislaus at 15.0 percent
15	Lemons	Ventura accounted for 31.4 percent of the total value, followed by Tulare at 20.8 percent

California's Leading Timber Counties, 2017¹

Timber Rank	County	Timber Volume Million Bd. Ft.	Total Agricultural Value (Including Timber) \$1,000	Timber Value \$1,000	Timber Percentage of Total Agricultural Value Within County
					Percent
1	Humboldt	288,970	376,446	120,765	32.1

5	Plumas ²	117,392	52,210	22,985	44.0

¹ Timber volume and value data are from the State Board of Equalization, Timber Tax Division.

² Agricultural value is from crop year 2015.

Trinity) were not available at the time of this publication. For each of these counties, except Modoc County, the most recently available report was used. Figures for Modoc County are not published this year, as the last report received from this county was from 2008.

Some counties include timber as a part of their crop report, following the pattern set by the California County Agricultural Commissioners and Sealers Association (CACASA). Since it is not comparable to earlier county summaries, timber has not been made a part of the main tables of this summary. The total value of production reported by the counties for 2017, including timber, was \$60.0 billion, which represents a 5.3 percent increase from the previous year. At a value of \$120.8 million, Humboldt County led the state

in timber production in 2017 and accounted for 28.2 percent of the state's total timber value.

County Agricultural Commissioners' Reports

Copies of individual County Agricultural Commissioners' Reports may be requested or obtained directly from each County Agricultural Commissioner's Office. Many of the counties publish the reports on their websites free-of-charge.

USDA's National Agricultural Statistics Service, California Field Office publications are available free-of-charge on the Internet at:
www.nass.usda.gov/ca.

¹ Agricultural production value is from crop year 2015. Data for crop year 2017 was not available at time of publication.

² Agricultural production value is from crop year 2016. Data for crop year 2017 was not available at time of publication.

Field Crops

The total value of California field crop production was \$3.2 billion in 2017, up only 0.2 percent from 2016. Cottonseed, potatoes, sweet potatoes, and alfalfa hay were the only field crops in California to increase in total value from 2016 to 2017. All other field crops decreased in total value during 2017 compared to the previous year.

The value of production for potatoes increased 24.3 percent in 2017. Both spring and fall potatoes saw rises in acres harvested. Production of spring potatoes increased 28.9 percent from 2016. The price per hundredweight and value of spring potatoes also increased during the year. All potatoes saw a 4 percent increase in price, and a 6.2 percent increase in yield per acre. Increases in harvested acres, yield per acre, and price per hundredweight led to the increase in value of production.

California barley production value decreased by 64.9 percent in 2017. The price per ton of barley increased by 12.8 percent. A decrease in harvested acres by over 53 percent, as well as a decrease in

yield per acre of 33.3 percent, resulted in an overall decrease in production to 33,600 tons, down nearly 75,000 tons from 2016.

California produced nearly 4.5 million tons of alfalfa hay in 2017, valued at \$785.4 million. Production of hay other than alfalfa decreased by 12 percent, and production of total hay decreased by 11.2 percent from 2016. In 2017, despite an increase in price per ton of over 11 percent, there was a 9.8 percent decrease in harvested acres of all hay, which resulted in an overall decrease in the value of production.

Rice plantings decreased by 17.7 percent compared to the prior year, with a total of 445,000 acres planted in 2017. Medium grain rice contributed to nearly 90 percent of the total planted rice acreage and 92.2 percent of the total production during the year. Acreage decreased for all types of rice (short, medium, and long). Yields increased for long rice in 2017, but decreased for short and medium rice. This resulted in a production decrease for all three types

of rice. The total value of rice production in the state was \$611 million, representing a decline of 9.8 percent from the previous year.

California corn for grain production was valued at \$56.1 million for 2017, which represents a 35.3 percent decrease from 2016. Harvested acreage decreased by 20 percent for the year. Additionally, both yield and price of corn for grain decreased from the previous year. Harvested acres of corn for silage increased by 9.5 percent to 345,000 acres in 2017. Production of corn for silage totaled 9.1 million tons during the year, resulting in a 9.5 percent increase from 2016.

Forty-three percent of the California wheat crop was harvested for grain in 2017. Wheat was planted on 420,000 acres and 182,000 acres were harvested for grain. Overall, production decreased 28.3 percent and total value decreased 23.2 percent compared to the previous year. Winter wheat production decreased by 25.2 percent from 2016, while Durum wheat production decreased by 38.6 percent from 2016.

Notable Increases in Production:

Beans, Garbanzo Dry	37%
Potatoes, Spring	29%
Cotton, American-Prima	25%
Haylage and Greenchop, All	20%
Potatoes, All	20%
Cotton, All	16%
Cottonseed	15%

Notable Decreases in Production:

Barley	-69%
Beans, Blackeye Dry	-44%
Haylage and Greenchop, Alfalfa	-42%
Wheat, Durum	-39%
Corn for Grain	-28%
Sunflower, Non-Oil	-28%
Wheat, All	-28%
Wheat, Winter	-25%
Rice, All	-21%
Safflower	-20%
Beans, Cranberry	-17%

¹ Area planted includes preceding fall.

² Production is on a clean basis.

³ Missing data has not been published due to the estimate being discontinued, not estimated, or not available.

⁴ Includes varieties not listed separately. Excludes beans grown for garden seed.

⁵ Planted acreage is for all purposes.

⁶ Price and value derived from County Agricultural Commissioner data. Report from 2017 is not yet available.

⁷ Production ginned. Cotton bales are 480 lbs. net-weight.

⁸ Preliminary Marketing Year Average Price.

⁹ All alfalfa forage production is the sum of alfalfa harvested as dry hay; and alfalfa haylage and greenchop production after converting it to a dry equivalent basis.

¹⁰ All forage production is the sum of the following dry equivalents: alfalfa hay and all other hay harvested as dry hay, alfalfa haylage and greenchop, all other hay haylage and greenchop; after converting alfalfa and all other haylage and greenchop to a dry equivalent basis.

¹¹ Estimated marketings of alfalfa and other hay used as weights to calculate all hay prices.

¹² Includes only alfalfa and alfalfa mixtures that were harvested as haylage or greenchop (green weight). Alfalfa harvested as dry hay is not included.

¹³ Includes all types of forage harvested as haylage or greenchop (green weight). Forage harvested as dry hay and corn and sorghum silage/greenchop are not included.

¹⁴ Beginning in 2010, winter and summer estimates included in spring total.

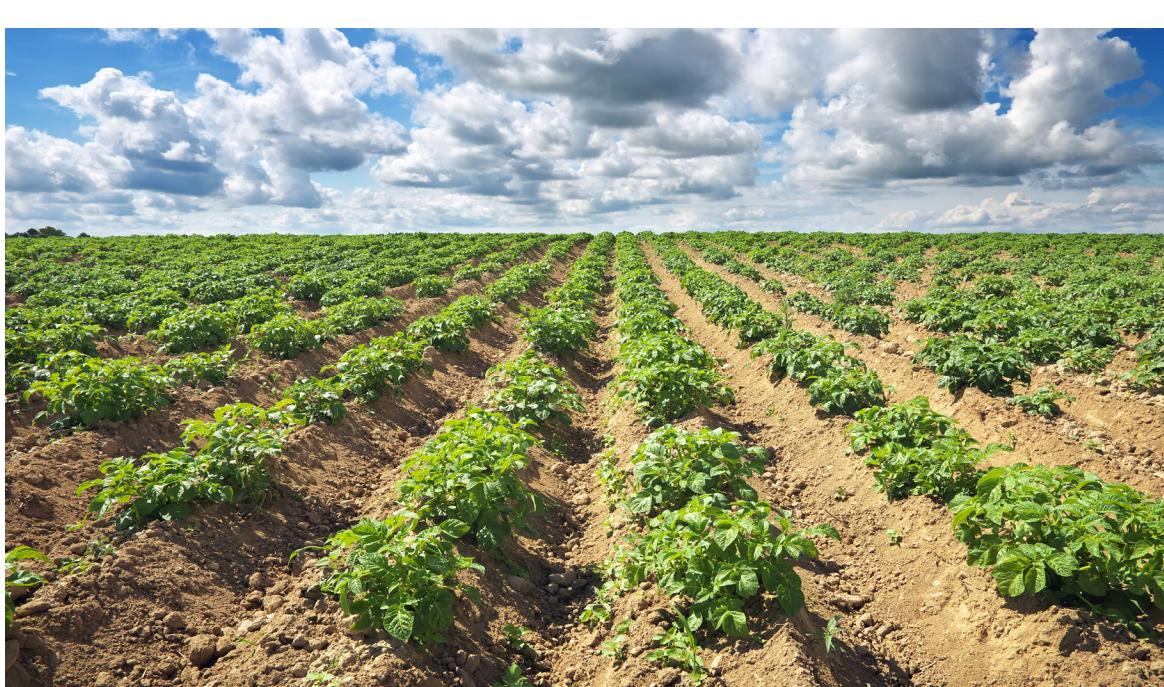

¹⁵ Includes sweet rice.

¹⁶ Excludes wild rice.

¹⁷ Relates to year of intended harvest for fall planted beets in central California and to year of planting for overwintered beets in central and southern California. Data for 2017 is not yet available.

D Withheld to avoid disclosure of individual operations.

NA Not available.

Fruit and Nut Crops

In 2017 California accounted for 46 percent of the United States fruit and nut production and over 67 percent of the national value. Of the citrus crops, California accounted for 51 percent of the U.S. citrus production and 66 percent of the national value. In total, the state produced nearly 20 million tons of fruits and nuts in 2017. The state's total value of all fruits and nuts in 2017 was \$20.8 billion.

Grapes remained ahead of almonds for a second year for the number-one valued fruit or nut crop in California, totaling \$5.8 billion in production value for 2017. Almonds were a close second at \$5.6 billion. California is the number-one producer of grapes in the United States, accounting for 85 percent of the total tonnage produced and nearly 90 percent of the production value. For almonds, California grows all of the domestic production and 80 percent of worldwide production.

Crops with record California production in 2017 were mandarins, almonds, strawberries, and sweet cherries. For nuts, California accounted for all of the national production of almonds, pistachios, and walnuts. For fruit, California grew all of the national production of figs, kiwifruit, olives, Clingstone peaches, dried plums, and raisins. California also accounted for a significant share of many other fruit crops. The state produced over 80 percent of the national production of apricots, avocados, dates, grapes, lemons, mandarins, nectarines, and plums.

In 2017 the nation's largest fruit producing states were California, Florida and Washington. California accounted for over 53 percent of the harvested fruit acreage in the country.

Notable Increases in Production:

Plums, Dried	94%
Cherries, Sweet	78%
Kiwifruit.....	19%
Olives	17%
Grapefruit.....	16%
Dates	15%
Pears, Bartlett.....	15%
Pears, All	11%
Mandarins	11%

Notable Decreases in Production:

Raspberries, Black	-47%
Avocados	-44%
Apricots.....	-34%
Pistachios	-33%
Oranges, Valencia.....	-20%
Grapes, Raisin	-19%
Oranges, All	-17%
Oranges, Navel and Misc.....	-17%
Raspberries, All	-17%
Raspberries, Red	-16%
Pecans	-13%
Apples	-12%

Grape Crush

Grape Crush Grape Overview

Information contained in this report was supplied by processors to fulfill the reporting requirements of Section 55601.5 of the Food and Agricultural Code.

The Grape Crush Report includes all grape tonnage crushed during the 2017 season. It also includes purchased tonnage and pricing information for grapes with final prices prior to January 10, 2018. Errata to the Grape Crush Report published on March 9, 2018 contains any late reports or corrections to the preliminary report.

Details of the crushed tonnage, degrees Brix, and weighted average prices were reported by grape type and variety as well as by grape pricing districts. The 17 districts refer to the area in which the grapes were grown as defined in the California Code of Regulations.

Summary of Grape Tonnages and Prices

The 2017 crush totaled 4,241,945 tons, up 0.6 percent from the 2016 crush of 4,217,154 tons. Red wine varieties accounted for the largest share of all grapes crushed at 2,249,982 tons, down 1.3 percent from 2016. The 2017 white wine variety crush totaled 1,765,810 tons, up 0.8 percent from 2016. Tons crushed of raisin type varieties totaled 94,268, up 4.6 percent from 2016, and tons crushed of table type varieties totaled 131,884, up 38.2 percent from 2016.

The Grape Crush Report includes the total number of tons crushed for concentrate production. In determining grape tonnage crushed for concentrate production, each processor was required to report the estimated equivalent tons of grapes crushed for grape concentrate. For the 2017 season, this total was 404,051 tons, 9.5 percent of the 2017 grape crush total. This report provides only the aggregate figure for grapes crushed for concentrate production and does not include information by district, type, or variety.

The 2017 average price of all varieties was \$778.37, up 2 percent from 2016. Average prices for the 2017 crop by type were as follows: red wine grapes, \$966.26, up 5.1 percent from 2016; white wine grapes, \$587.80, down 1.8 percent from 2016; raisin grapes, \$252.86, up 18.4 percent; and table grapes, \$178.37, up 16.5 percent.

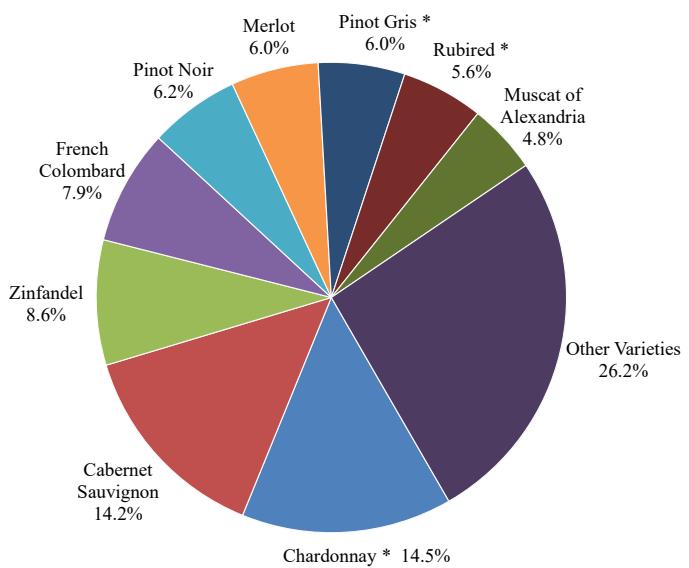

Leading Grape Varieties and Districts

In 2017 Chardonnay continued to account for the largest percentage of the total crush volume with 14.5 percent. Cabernet Sauvignon accounted for the second leading percentage of crush with 14.2 percent. Thompson Seedless, the leading raisin grape variety crushed for 2017, was only 1.8 percent of the total crush.

District 13, (Madera, Fresno, Alpine, Mono, Inyo counties; and Kings and Tulare counties north of Nevada Avenue (Avenue 192)), had the largest share of the state's crush, at 1,403,167 tons. The average price per ton in District 13 was \$304.48.

Grapes produced in District 4 (Napa County) received the highest average price of \$5,228.80 per ton, up 11.5 percent from 2016. District 3 (Sonoma and Marin counties) received the second highest return of \$2,809.01, up 8.4 percent from 2016. The 2017 Chardonnay price of \$923.72 was up 4.2 percent from 2016, and the Cabernet Sauvignon price of \$1,553.68 was

Leading Varieties Crushed Percentage of Total 2017 Crush

up 5.7 percent from 2016. The 2017 average price for Zinfandel was \$591.42, down 2.2 percent from 2016, while the French Colombard average price was up 2.5 percent from 2016 at \$267.39 per ton.

* Synonyms for variety names are shown below.

Grape Variety Synonyms

Blaufraenkisch - Lemberger	Beauty Seedless - Black Beauty	Black Prince - Rose of Peru
Cinsaut - Black Malvoisie, Black Malvasia	Burger - Monbadon	Chardonnay - Pinot Chardonnay, Chardonnay Musque
Flame Seedless - Red Flame	Crimson Seedless - Red Crimson	Emerald Seedless - Black Seedless
Grenache - Grenache Noir	Gamay (Napa) - Gamay, Valdiguié	Gray Riesling - Trousseau Gris
Mataro - Mourvedre	Italia - Muscat Italia	Malaga - White Malaga
Muscat Blanc - Muscat Canelli	Meunier - Pinot Meunier	Moscato Giallo - Muscat Yellow
Negrette - Pinot St. George	Muscat Blanc A Petits Grains	Muscat Hamburg - Black Muscat
Pinot Gris - Pinot Grigio	Nero D'Avola - Calabrese	Palomino - Golden Chasselas
Refosco - Mondeuse	Princess - Melissa	Red Globe - Rose Ito
Ruby Seedless - King Ruby	Ribolla Gialla - Rebolla	Rubired - Tintoria
St. Emilion - Ugni Blanc, Trebbiano	Sangiovese - Sangiovese, Brunello	Sauvignon Vert - Muscadelle
Touriga Nacional - Touriga	Syrah - French Syrah, Shiraz, Syrah Noir	Tempranillo - Tinta Roriz, Valdepenas
White Riesling - Johannisberg Riesling, Riesling	Trousseau - Bastardo	Vermentino - Vennentino

Livestock and Dairy

California's total livestock and livestock products cash receipts were over \$11.2 billion in 2017, up nearly 7 percent from 2016. An 8.2 percent increase in cash receipts for dairy products was the principal contributor to the rise in total livestock value, accounting for more than 70 percent of the total increase. Livestock and livestock products accounted for over 22 percent of the state's gross cash receipts and over 6 percent of total U.S. livestock cash receipts. California ranked fourth behind Texas, Iowa, and Nebraska in total livestock receipts for 2017. Dairy products remained the state's leading commodity and accounted for 17.3 percent of receipts for U.S. dairy products. Receipts for hogs and pigs were up 5.6 percent from the previous year. Poultry and egg cash receipts were up 10.6 percent from 2016. Cash receipts for cattle and calves increased 2.7 percent from 2016.

For the first ten months of 2017, California milk prices surpassed prices of the corresponding month of the prior year. Prices declined over the last two months as increased global production and inventory levels outweighed market demand for dairy products. Dairies continued to be shuttered during the year. By the end of 2017, there were 61 fewer dairies in the state. In 2016 and 2015, the state lost 46 and 32 dairies, respectively. In 2017 the total cost to produce farm milk declined by 2.5 percent compared to the previous year. The main driver in lower total production costs was the decrease in feed prices. Feed costs in 2017 accounted for 54.4 percent of total cost, which represents the lowest portion of total cost over the last five years.

California continued to be the nation's leading dairy state. The Golden State's sales of milk and cream totaled \$6.56 billion in 2017, up from \$6.07 billion in 2016. Wisconsin, New York, Idaho and Texas were the next leading states in total

dairy receipts. The top five dairy states accounted for over 55 percent of total U.S. dairy receipts. California ranked number one in the U.S. in the production of fluid milk, butter, Mozzarella, Hispanic cheeses, dry buttermilk, and nonfat dry milk. California continued to be second in total cheese production behind Wisconsin.

California's dairies produced 39.8 billion pounds of milk, accounting for 18.5 percent of the nation's milk supply. The monthly average production exceeded 3.3 billion pounds. Milk production per cow averaged 22,755 pounds, down 0.9 percent from 2016. California's total cheese production, excluding cottage cheese, was 2.513 billion pounds, down almost 1.77 million pounds from the prior year. Forty-six percent of California's pooled milk was utilized to produce cheese and whey products. Mozzarella continued to account for the bulk of California cheese production, constituting nearly 59 percent of the state's total cheese.

According to the California Department of Food and Agriculture's Dairy Marketing Branch, 31 counties contributed to the state's commercial milk production. The top five milk-producing counties in California, accounting for over 72 percent of the state's total milk production, were Tulare (27.4 percent), Merced (15.4 percent), Kings (10.4 percent), Stanislaus (9.9 percent), and Kern (9.4 percent). The production of these five counties accounted for over 13.4 percent of U.S. total milk production in 2017.

Cattle and calf sales totaled \$2.625 billion in 2017, compared to \$2.556 billion in 2016. California's total cattle and calf inventory on January 1, 2017 was 5.15 million head, unchanged from the prior year. Commercial cattle slaughter increased in 2017 to 1.336 million head from 1.219 million head the previous year,

while the annual average live weight decreased to 1,333 pounds from 1,354 pounds in 2016. Hog and pig sales were \$25 million in 2017, up from last year's sales of \$23.7 million. The December 1, 2017 hog and pig inventory of 95,000 head was 6,000 more than the prior year. The state's commercial hog slaughter decreased from 2.446 million head in 2016 to 2.390 million head in 2017. The annual average live weight of slaughtered hogs in 2017 was 250 pounds, up four pounds from the prior year. Sheep and lamb inventory increased from 575,000 on January 1, 2016 to 600,000 by January 1, 2017. Commercial sheep and lamb slaughter for 2017 was 298,500 head, 16,100 less than the prior year. The annual average live weight of sheep and lambs was 146 pounds, four pounds more than 2016's average slaughter weight. Wool production declined in 2017 to 2.5 million pounds from the prior year's value of 2.8 million pounds. The average price received for wool increased five cents in 2017 to \$1.55 per pound.

California honey production in 2017 totaled 13.7 million pounds, representing a 23.1 percent

increase from the prior year. During the year, there was a total of 335,000 bee colonies producing honey, up 25,000 from the 2016 colony count, and near the ten-year average of 340,000 hives. In 2017 hive numbers continued to recover, following a five-year stretch of declining numbers between 2011 and 2015. On average, colonies produced 41 pounds of honey in 2017, compared to 36 pounds per hive in 2016. The average price received in 2017 for honey was \$2.09 per pound, five cents above the prior year's price.

California Livestock Cash Income, 2016-2017 ¹			
Source of Income	2016 \$1,000	2017 \$1,000	Percent Change

¹ Preliminary data.

² Excludes processed cheese and cottage cheese.

³ Includes Cheddar, Colby, washed curd, stirred curd, Monterey, and Jack.

⁴ Includes all cheeses not included in the above categories.

⁵ Includes low fat and nonfat cottage cheese. Fat content is less than 4 percent.

⁶ Contains minimum milk-fat content of 10 percent and not less than 4.5 pounds per gallon.

⁷ Includes hard, soft-serve, freezer-made milkshake, and freezer-made "milk drink".

Contains less than 10 percent milk-fat required for ice cream.

⁸ Not shown when fewer than three plants reported or individual plant operations could be disclosed.

⁹ Frozen products in 1,000 gallons.

Vegetables and Melons

California continued as the leading vegetable producing state in 2017, accounting for 39 percent of the U.S. harvested vegetable acres, 57 percent of the national production, and 57 percent of the value for the 26 selected vegetables and melons estimated.

The total value of California's 2017 fresh and processing vegetable and melon production was \$7.9 billion, up from 2016's revised total of \$7.3 billion. Lettuce remained the leading vegetable crop in value of production at \$2.4 billion, followed by tomatoes with \$1.1 billion.

Pumpkin production increased to nearly 86,000 tons in 2017, as irrigation supplies prevailed after several years of drought. Yield per acre increased by 22 percent, and value per unit decreased by 23 percent, leading to an overall decrease in the value of total production by 2 percent.

California's acreage harvested for processed tomato decreased by 14 percent in 2017. Yield per acre and value per unit saw significant drops as well, resulting in an overall 22 percent decrease in value of production.

Vegetable crops that recorded increased production were cauliflower, sweet corn, garlic, romaine lettuce, watermelons, onions, and pumpkins.

Crops that realized decreased production included asparagus, artichokes, broccoli, cabbage, carrots, celery, leaf lettuce, head lettuce, cantaloupe melons, honeydew melons, mushrooms, bell peppers, chili peppers, snap beans, spinach, squash, processing tomatoes, and fresh market tomatoes.

Notable Increases in Production:

Pumpkins.....	27%
Corn, Sweet.....	17%
Cauliflower.....	16%
Melons, Watermelon	14%
Garlic.....	13%
Onions	11%

Notable Decreases in Production:

Asparagus.....	-41%
Spinach.....	-20%
Lettuce, Leaf	-19%
Tomatoes, Processing	-17%
Squash	-17%
Tomatoes, Fresh Market.....	-15%
Melons, Honeydew	-14%
Celery	-11%
Broccoli.....	-11%

¹ The processed price is based on equivalent returns at the processing plant door. The fresh market price is at the point of first sale.

² Includes both fresh market and processed vegetables.

³ 2008 to 2015 data is for fresh market only, 2016 to 2017 data is for fresh and processed.

⁴ 2011 to 2017 data are not published to avoid disclosing data for individual operations.

⁵ Harvested area is in thousand square feet

⁶ Primarily dehydrated and other processing. Production includes quantity harvested. Total Values equals production minus summer storage shrinkage and loss (250,000 cwt per year).

⁷ Included in summer storage onions.

⁸ 2013 to 2017 data are not published to avoid disclosing data for individual operations.

D Withheld to avoid disclosure of individual operations.

NA Not available.

¹ On the basis of "paid-for tonnage" purchased from growers as reported by processors dockage not included.

² To avoid disclosure of individual operations, "Other Counties" includes: Butte and Glenn.

California Agricultural Exports

In 2017 California's agricultural exports totaled \$20.56 billion in value, representing an increase of 2.2 percent compared to the previous year. As indicated in the table below, California's agricultural exports have grown substantially over the past 10 years, despite slight contractions in 2009, 2015 and 2016.

California's top valued agricultural export commodity continues to be almonds, with a value of nearly \$4.5 billion in foreign sales in 2017. This figure, however, remained relatively flat compared to the previous year's figure. California dairy and dairy products recorded an export value of \$1.6 billion in 2017, ranking in second place and surpassing pistachios, which achieved 32.7 percent growth over the prior year with an export value of \$1.52 billion.

The principal 57 export commodities accounted for \$17.86 billion in export value in 2017, or 86.8 percent of the total value of California's agricultural exports; the remaining 13.2 percent of exports were associated with "Other Products and Mixtures". Of the top 57 commodities exported, 21 showed an increase in export value of 5 percent or more, compared to the previous year, while 12 experienced a decrease in export value of 5 percent or more.

California's share of total U.S. agricultural exports for 2017 was 14.9 percent, which is about the same as the share realized last year. California's top 10 export destinations – the European Union, Canada, China/Hong Kong, Japan, Mexico, Korea, India, United Arab Emirates, Turkey, and Vietnam – accounted for 70.0 percent of the 2017 export value. India showed the largest growth in total export value with a 32.5 percent increase compared to the previous year.

Methodology

Data to compute agricultural exports are derived from official government sources, published industry sources, and unpublished information from the government and the industry. Export quantities and values of the whole U.S. and California port districts are from the Department of Commerce (DOC) trade data posted on the United States International Trade Commission (USITC) online database (<http://dataweb.usitc.gov/>). Canadian import (value) data are from Strategis Canada's online database (<http://strategis.ic.gc.ca/engdoc/main.html>). If the California export price is not available for a particular product, we use the U.S. average export price for that commodity in order to provide a dollar value for exports.

Production quantities and values are from various National Agricultural Statistics Service (NASS), Economic Research Service (ERS), and Agricultural Marketing Service (AMS) publications. A share of the raw data provided in these USDA service publications are released

California Agricultural Export Values, 2007-2017

Year	Export Value \$1 Billion
2017	\$20.56
2016	\$20.12
2015	\$20.81
2014	\$21.55
2013	\$21.55
2012	\$18.77
2011	\$17.23
2010	\$14.75
2009	\$12.44
2008	\$12.90
2007	\$11.21

as a preliminary report early in the calendar year followed by a more accurate final report released at a later date. For accuracy, The University of California Agricultural Issues Center (AIC) export estimates use data from final USDA reports.

AIC exports estimates use different methods from other sources, such as ERS. The ERS estimates are based on a state's national share of production of the exported commodity. The ERS method assumes that, for any particular commodity, a state's share of U.S. production equals that state's share of U.S. exports. Other sources use geographic port data, without direct links to where the product originated. The AIC export figures correspond to commodities that have been produced on farms and ranches within

California. Products originated in another state and exported via California ports are not included in these statistics.

In most cases, AIC reports exports at the individual commodity level. For instance, exports of a given fruit in fresh, canned, and dried forms are summed and listed under the name of the fruit, although the method for fresh fruit exports may differ from the method used for canned and dried fruit. The ratio of quantity exported to quantity produced is given on a farm weight basis. That means, for example, that wine is converted back into fresh grapes. Standard conversion factors published by the USDA are applied.

Total All Agricultural Exports⁸		20,806	20,117	20,561	2.2	

¹ Total export values for each year are rounded to the nearest million dollars. More precise values are used in the percent change calculations.

² Export values for 2016 were revised based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.

³ Hides and skins are included in the heading "Beef and Products".

⁴ Export values for 2015 were revised based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.

⁵ "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.

⁶ "Total Principal Commodity" values for 2015 and 2016 were revised based on updates to U.S. Department of Agriculture/National Agricultural Statistics Service production data.

⁷ "Total Other Products and Mixtures" is composed of (a) highly processed products that are difficult to attribute to a specific commodity such as mixtures of fruits, nuts and vegetables and other processed foods; (b) categories for which the listed item does not provide data on individual commodities and (c) animal and plant products marketed in such small quantities that they are not included in the top 57 leading commodities.

⁸ "Total All Agricultural Export" values for 2015 and 2016 were revised based on updates to U.S. Department of Agriculture/National Agricultural Statistics Service production data.

Tomatoes, Fresh	117	35.1	117	34.9	-0.7
Flowers and Nursery	406	23.9	426	27.5	15.2
Total California Principal Commodities	43,836	39.7	48,593	36.7	-7.4
Total Other Products and Mixtures⁴	90,837	3.0	89,583	3.1	2.2
Total U.S. Agricultural Exports⁵	134,673	14.9	138,175	14.9	0.2

¹ Hides and skins are included in the heading "Beef and Products".

² Product category "Olives and Olive Oil" is equal to the product category "Olives and Products" found in previous years' data tables.

³ "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.

⁴ Total "Other Products and Mixtures" is equal to "Total U.S. Agricultural Exports" minus "Total California Principal Commodity Exports".

⁵ Total U.S. agricultural export values come from USDA. USDA defines agriculture to include: live animals, meat, and products of livestock, poultry, and dairy products; hides and skins (but not leather products); animal fats and greases; food and feed grains and grain products; oilseeds and oilseed products; fruits, nuts, and vegetables and products of these; juices, wine, and malt beverages (not distilled spirits); essential oils; planting seeds; raw cotton, wool, and other fibers (not manufactured products of these); unmanufactured tobacco (not manufactured tobacco products); sugar and sugar products; coffee, cocoa, tea, and products of these; rubber and allied products; and stock for nurseries and greenhouses, spices, and crude or natural drugs. Fish, shellfish, and forestry products are not included in "agriculture".

¹ This table shows destinations that receive shares of total exports greater than or equal to 5 percent of each commodity in either 2016 or 2017 for which reliable data are available. The commodities are listed in order of export value and the numbers in parentheses correspond to the 2017 ranking in the Table "California Agricultural Products Export Values and Rankings, 2015-2017."

² Accurate export destination data are only available for 50 of the top 57 commodities. The commodities for which export destinations are not included are "Apples", "Chickens", "Eggs", "Mushrooms", "Seeds for Sowing", "Turkey" and "Wheat".

³ Hides and skins are included in the heading "Beef and Products".

⁴ "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.

Almonds	2.2	2.2	-1.1				

¹ This table provides the total export value and export values for individual commodities to the top 15 destinations. Only commodities with export values greater than \$2 million to the destination are reported.

² "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.

³ Hides and skins are included in the heading "Beef and Products".

	Total ³	1,621	380	80	420	650	336		3,488

¹ The EU-28 members to which California exports are shipped reflect only the initial destination of the product, not the EU country of consumption.

Many products are distributed throughout the EU after the initial entry.

² "Other Principal Products" are those that individually account for less than \$100 million in export value to the EU.

³ Accurate export destination data is only available for 50 of the top 57 commodities. The commodities for which export destinations are not included are "Apples", "Chickens", "Eggs", "Mushrooms", "Seeds for Sowing", "Turkey" and "Wheat". Totals may not equal due to rounding.

⁴ The other 18 EU members in 2017 and 2016 include Austria, Bulgaria, Cyprus, Croatia, Czech Republic, Estonia, Finland, Greece, Hungary, Ireland, Latvia, Lithuania, Luxembourg, Malta, Portugal, Romania, Slovak Republic, and Slovenia. These countries combined account for just over 4 percent of California agricultural exports to the EU in 2016 and just over 5 percent in 2017.

¹ Export quantities of processed goods were converted to farm fresh quantities using conversion factors published by USDA ERS (<https://www.ers.usda.gov/publications/pub-details/?pubid=41881>) or annual conversion factors published by USDA NASS in annual crop summaries.

² Quantities for 2016 were revised based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.

³ Hides and skins are included in the heading "Beef and Products".

⁴ Farm quantity exported for "Dairy and Products" is calculated by converting cheese, condensed milk, fluid milk, ice cream, nonfat dry milk, and whole dry milk to their fluid milk equivalents.

⁵ "Grapes, All" includes grape juice, raisins, table grapes, and wine.

⁶ "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.

⁷ The weighted average is based on each of the 53 commodity's share of production value. Values for "Chickens", "Flowers and Nursery", "Mushrooms" and "Seeds for Sowing" are not included because reliable data on export quantity is not available.
