

# 2000 California Almond Acreage Report

Released: May 9, 2001  
12:00 P.M. PDT

CALIFORNIA AGRICULTURAL  
STATISTICS SERVICE

## RESULTS

California's 2000 almond acreage is estimated at a record 595,000 acres, according to the California Agricultural Statistics Service (CASS). Bearing acreage is 500,000 acres and non-bearing is 95,000 acres.

Nonpareil continues to be the leading variety, followed by Carmel and Butte. Butte, Carmel, Monterey, and Padre all showed significant acreage increases.

Kern, Merced, Stanislaus, and Fresno are the leading counties.

## OBJECTIVES

The purpose of this survey is to provide annual almond acreage with information on new plantings and removals. It is a continuation of a long series of industry funded almond acreage surveys.

Users are cautioned that this report consists of two parts:

- ▶ Estimated almond acreage -- bearing, non-bearing, and total.
- ▶ Detailed data by variety, year planted, and county -- as voluntarily reported by almond growers and maintained in the CASS data base.

With perfect information, the estimated almond acreage and the detailed data would be synonymous. However, this will never be the case for the following reasons:

- ▶ A voluntary census of 6,000 almond growers is unlikely to ever attain 100 percent completeness.
- ▶ It is extremely difficult for a small staff in Sacramento to detect growers that are planting almonds for the first time.
- ▶ The detailed data reflects tree removals from more than 20,000 acres (mostly planted in the 1960's and 1970's) during the past twelve months. Of this number, a significant amount of acreage was harvested in 2000 prior to being pushed out, and that acreage has already been removed from the detailed data.

## PROCEDURES

To arrive at the estimated almond acreage, a sample was selected from the pesticide application data maintained by County Agricultural Commissioners and the Department of Pesticide Regulation. This sample was compared to the almond acreage data base as maintained by CASS. When significant discrepancies were detected, the grower was contacted to obtain additional data and the information was included in the detailed data.

The major source of the almond detailed data was a questionnaire mailed to all almond growers included on the CASS data base. The mailing was made in late December 2000 to approximately 6,000 almond growers. The questionnaire contained previously reported crop, variety, and acreage information preprinted. Producers were asked to update the information with new plantings, removals, and any other corrections; new growers were mailed a blank questionnaire. Growers were given six weeks to respond by mail. A telephone follow-up was then undertaken. Field personnel personally visited large growers who did not respond by mail or telephone.

## ACKNOWLEDGMENTS

The California Agricultural Statistics Service sincerely appreciates the many farm operators, owners, and management firms providing the information. Special thanks is due the Almond Board of California for funding.

Appreciation is due the following office staff for the hundreds of hours spent phoning and processing survey information: Mitch Graham (Mathematical Statistician), Regina Claypoole, Pearl Gonzalez, Lupe Moreno, Sarah Otter, Jeremiah Rhine, April Sanders, and Sheryl Zazzi.
