

# 2005 California Walnut Objective Measurement Survey Report

Released: September 1, 2005  
12:00 P.M. PDT

USDA, National Agricultural Statistics Service  
California Field Office

## WALNUT PRODUCTION FORECAST UP

The 2005 California walnut production is forecast at a record 340,000 tons, up 5 percent from 2004's production of 325,000 tons. This forecast is based on the 2005 Walnut Objective Measurement (O.M.) Survey, which was conducted July 29 through August 24, 2005.

The 2005 Walnut O.M. Survey utilized a total of 655 blocks with two sample trees per block. Survey data indicated an average nut set of 1,575 per tree, up 3 percent from 2004's average of 1,526. The Hartley nut set was down 15 percent; Chandler, was up 29 percent; Serr, was up 22 percent; Franquette, was down 40 percent from 2004. Percent of sound kernels in-shell was 97.5 percent Statewide. In-shell weight per nut was 20.0 grams, while the average in-shell suture measurement was 31.7 millimeters. The average length in-shell was 38.6 millimeters.

Estimated nut sets, sizing measurements, average number of trees per acre, and estimated bearing acreage were used in the statistical models.

## SURVEY HISTORY

The Walnut O.M. Survey began in 1958 to fulfill industry needs for an accurate walnut production forecast prior to harvest. The original sample was chosen proportionally to county and variety of bearing acreage. With each succeeding year, additions and deletions have been made in the sample to adjust for acreage removed, new bearing acreage and operations that choose not to participate in the survey.

## SAMPLING PROCEDURES

Once a block is randomly selected and permission is granted by the operation for enumerators to enter the block, two trees are randomly selected. An accessible branch is chosen, which is 5-15 percent of the total cross-sectional area of the primary limbs and reachable with a twelve-foot ladder. Measurements are made on the trunk, each primary, and each split leading to and including the accessible branch. The sample tree and accessible branch are marked by a single tag.

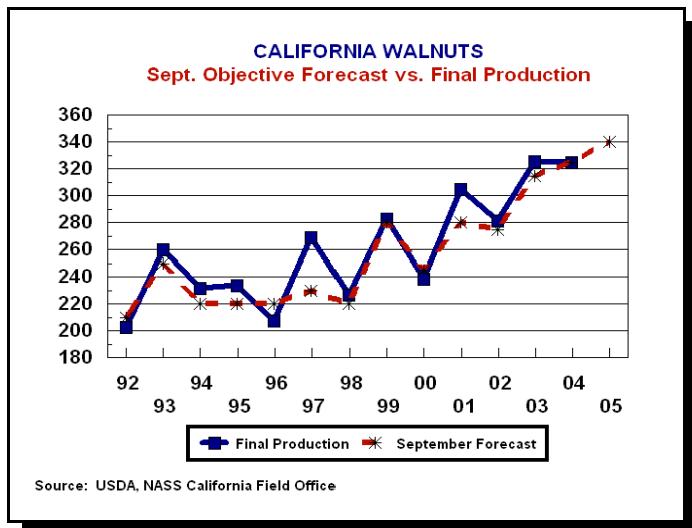

On the accessible branch, every first of five nuts is picked for use in size and grade determinations. If available, at least ten nuts are harvested from the accessible branch for this purpose.

The following measurements are made on nuts selected for sizing:

1. Weight of nut including hull
2. Width of shell at suture
3. Width of shell 90 degrees to suture line (cross-suture)
4. Length of shell
5. Kernel grade
6. Weight of nut in-shell

## DATA RELIABILITY

The 80 percent confidence interval is from 313,000 tons to 367,000 tons. This means there is an 80 percent chance the 2005 production will fall within this range.

**California English Walnut Acreage, Production, Price And Value In-Shell**

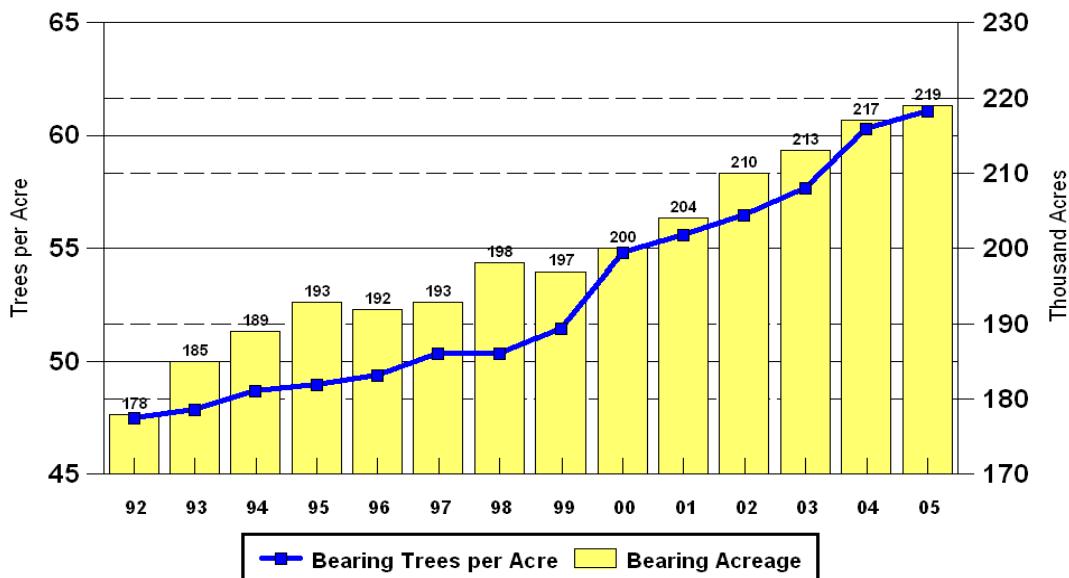

Year	Bearing Acres	Total Production	Per Bearing Acre	Price Per Ton	Total Value
		Tons		Dollars	
1987	176,000	247,000	1.40	984.00	243,048,000

2001	204,000	305,000	1.50	1,120.00	341,600,000
2002	210,000	282,000	1.34	1,170.00	329,940,000
2003	213,000	326,000	1.53	1,160.00	378,160,000
2004 a/	217,000	325,000	1.50	1,350.00	438,750,000
2005 b/ c/	219,000	340,000	1.55	---	---

a/ Price Per Ton and Total Value are July 2005 preliminary data.

b/ Bearing years include plantings of the following: Chandler, Chico, Howard, Tulare (2001 & Earlier); 50-55, 59-124, 4946, Amigo, Ashley, Bardoni, Cisco, Earhorn, Grove, Gustine, Honeycutt, Houston, Jensen, Lompoc, Marchetti, Nuggett, Payne, Pedro, Serr, Sunland, Tehama, Trinta, UCD 67-13, Vina, Westside (2000 and Earlier); Franquette, Franquette Scharsch, Mayette, Placentia, Poe, Willsons/Willsons Wonder, Woodland (1998 & Earlier); all other varieties not specified (1999 & Earlier).

c/ Price Per Ton and Total Value preliminary data will be released July 2006.

1/ Coast includes: Contra Costa, Lake, Monterey, Napa, San Benito, San Luis Obispo, Santa Clara, and Sonoma counties.

2/ Sacramento Valley includes: Butte, Colusa, El Dorado, Glenn, Sacramento, Solano, Sutter, Tehama, Yolo, and Yuba counties.

3/ San Joaquin Valley includes: Fresno, Kern, Kings, Madera, Merced, San Joaquin, Stanislaus, and Tulare counties.

4/ District and State averages are derived by weighting county averages by county bearing acreage figures.
